

Can we restrict users to choose their screen display?

Last Modified on 03/19/2020 10:02 pm IST

Please note that during the webcast event, the presenter can choose what is displayed on the main screen (stage tab) in real-time; the presenter has the power to rotate between the screen, camera, and slides during the live event.

However, you may not restrict the end-users from choosing their favorite layout in case a slide deck is used. This is a by-design and part of Kaltura's rich interactive video player.
