Debug

Last Modified on 11/01/2020 10:22 am IST

Field	Description
logLevel	Debug level of the KAF Log File (logs/kms.log)
kalturaDebug	Enable debug log of requests to the Kaltura API (logs/apidebug.log)
kalturaStats	Enable stats log of requests to the Kaltura API (logs/api.log)

The Debug feature provides a way to record event logs and debug messages on a remote device, such as the Kaltura server (in SaaS) or the On-Premises server. By default, the Debug log Level is enabled to allow a higher level of event log messages to send to an external device for debugging purposes.

NOTE: The Kaltura SaaS server logs are only accessible by Kaltura's third level support and development engineers.

You can set the severity level of the messages to control the type of messages displayed on the console, as follows:

Log Level Keyword	Level	Description
ALERT	1	System unstable
CRIT	2	Critical conditions
ERR	3	Error conditions
WARN	4	Warning conditions
NOTICE	5	Notification conditions
INFO	6	Informational messages only
DEBUG	7	Debugging messages
DUMP	8	Core dumps
