SharedRepositories

Last Modified on 06/04/2020 7:19 pm IDT

The SharedRepositories module allows any member to not only browse the media that is published in the shared repository, but also use the media to publish to other channels and/or categories. The shared repository allows education institutions and enterprises to create a shared media location for media that anyone with access to it has publishing rights to other areas in MediaSpace.

Metadata is composed of the following:

- customDataProfileId
- nested filters

At least one of these must be defined for the Advanced Search form to display in your MediaSpace instance. **customDataProfileId (schema)** - Create a metadata schema, and select it in the KMS admin sharedRepositories module.

The customDataProfileId selected in the sharedRepositories module **MUST** be different than the profileId selected in Customdata module.

nested filters - Select "yes" in the nestedFilters field, to enable the nested filters appearance in KMS and to create the nestedFilters category (if needed).

Nested filters should be created in the KMC. In the KMC Categories tab site > nestedFilters category, add nested categories (up to 2 levels) which will be used as labels on the entry. For example, Create nestedFilters>Science category and nested to it create nestedFilters>Science>Physics and nestedFilters>Science>Biology. This allows you to tag your entry with the relevant labels.

Currently, searching for nested filters is only available via the Shared Repository Advanced Search.

Field	Description
enabled	Enable shared repositories.
amountOfSharedRepositories	Amount of shared repositories to show in the drop down (when adding media from shared repository).
termsOfUseLink	Enable Terms of Use
nestedFilters	Enable nested filters. Configure them as nested categories under root>site category in the KMC.

customDataProfileId Field	Choose custom metadata schema for media in the shared repository. All custom data schemas can be viewed in KMC > Settings > Custom Data Description
requiredFields	Which custom metadata fields are required before publishing media to a shared repository? Use custom data system names from KMC > Settings > Custom Data
dateFormat	What is the format of the date for the date picker (of the shared repository custom data)?
