# Kaltura MediaSpace Setup for Integrating InPlayer

Last Modified on 06/05/2020 2:42 am IDT

## Login to the Configuration Management Section of Kaltura MediaSpace

Login to your MediaSpace Configuration Management admin site at:

https://[your_partner_id].mediaspace.kaltura.com/admin

## Configure the Auth Module

1. In the list of configurable items on the left of your screen, locate and click on **Auth**.
   > **NOTE:** If you want to create two login options (one for user and one for administrator) so that you can create and configure channels in MediaSpace, you must enable and configure MultiAuth. If you would rather do so in the KMC, MultiAuth configuration is not necessary.

   In the enableMultiAuth pull down list, select **Yes**. Additional configuration options display.

2. Scroll to the authMethods section. You will set up two authMethods here.

3. For the first authMethod:

   a. Under the authMethods section, click **+ Add "authMethods"**.

   b. In the method pull down list, select SSO Gateway AuthN.

4. For the second authMethod:

   a. Under the authMethods section click **+ Add "authMethods"** again.

   b. In the method pull down list, select KalturaAuthN.

   These settings prevent users who authenticate via the InPlayer SSO to add/edit content to channels. Only admin users who authenticate via the Kaltura authentication will be able to do so.

**NOTE:**   Once you are finished creating and configuring channels in MediaSpace using your two login options, go back to the MediaSpace Configuration Management admin site and disable multiAuth (set the **enable multiAuth** setting to **No**). Set the **authNAdapter** with 'SSO Gateway AuthN' and set the **authZAdapter** with 'SSO Gateway AuthZ'.

5. Scroll down to the sso section. You will complete two fields here.

6. In the loginURL field, enter the InPlayer MediaSpace App URL, *making sure to first edit the parts in bold with your InPlayer merchant UUID and your MediaSpace domain URL.*
   Depending on which environment you are currently running (Demo or Live), the InPlayer MediaSpace App URL is as follows:
   Demo Environment: https://staging-mediaspace.inplayer.com/**merchant-uuid**?mediaspace=**domain-url**
   Live Environment: https://mediaspace.inplayer.com/**merchant-uuid**?mediaspace=**domain-url**

   ○ The domain-url is the URL where your MediaSpace portal is hosted.
   ○ To find your InPlayer merchant UUID, go to your InPlayer account at https://dashboard.inplayer.com/account/details/details and copy it from there.
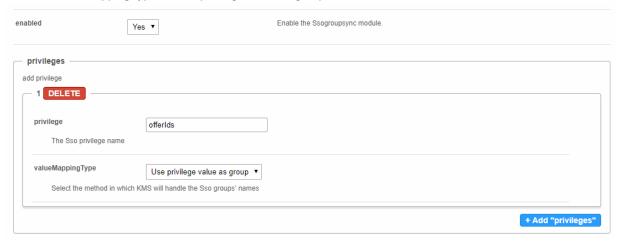

Account Email: ~~marija@inplayer.com~~

Account ID: ~~21594~~

Account UUID: ~~40005b9c-b7c0-460c-88cb-055d7472f55a~~

Full Name: ~~Marija~~

7. In the logoutURL enter the following:

Demo Environment: https://staging-mediaspace.inplayer.com/**merchant-uuid**?mediaspace=**domain-url**&logout=true

Live Environment: https://mediaspace.inplayer.com/**merchant-uuid**?mediaspace=**domain-url**&logout=true

8. Click **Save**. A message displays confirming your configuration for Auth was saved.

9. Click **OK**.

## Configure the Ssogroupsync Module

1. In the list of configurable items on the left of your screen, locate and click on the **Ssogroupsync** module.
2. In the enabled pull down list, select **Yes**.
3. Click **+ Add "privileges"**.
4. In the privilege field, enter offerIds.
5. Leave the valueMappingType as Use privilege value as group.

| enabled | Yes ▼ | Enable the Ssogroupsync module. |
|---|---|---|

**privileges**

add privilege

1 DELETE

| privilege | offerIds |
|---|---|
| | The Sso privilege name |
| valueMappingType | Use privilege value as group ▼ |
| | Select the method in which KMS will handle the Sso groups' names |

**+ Add "privileges"**

6. Click **Save**. A message displays confirming your configuration for Ssogroupsync was saved.
7. Click **OK**.
