Caliper

Last Modified on 06/04/2020 7:02 pm IDT

For information about how to configure Caliper see Support for Caliper - How Caliper Works with Kaltura Extensions and KAF.

Field	Description
enabled	Enable the Caliper module.
directCaliperIntegration	Select Yes to send data to your LRS directly. If you want to use Caliper, but your LMS may not provide Caliper information dynamically in the LTI launch (in the form of custom_caliper_service_url parameter), you can configure KAF to send Caliper events to a static Caliper endpoint in your LRS using a one-time API key.
CaliperEventUrl	The URL in your LRS that accepts Caliper events.
CaliperApiToken	Enter the API Key to use when sending Caliper events to the LRS.
CaliperSensorId	The Sensor ID to set in the Caliper events, if needed.
CaliperVersion	Select the Caliper version.
