

How to configure the KMC to provide server side notifications?

Last Modified on 08/28/2020 6:27 pm IDT

For a complete list of notifications that are supported in KMC, [click here](#).

To enable the notifications

1. In the KMC, select the Settings tab and then select the Integration Settings menu.
2. Toggle Yes to receive server notifications.
3. Enter the Notification URL and Save Changes.

For more information about the various notifications and how to implement a notification handler script on your server, refer to: http://www.kaltura.com/api_v3/testmeDoc/index.php?page=notifications or

https://github.com/kaltura/server/tree/Jupiter-10.2.0/plugins/event_notification/providers/http.
