

EmailTemplates Module

This article is designated for administrators.

About

Use this module to set up email templates to be sent out to users.

- Be certain that you do not have Access Control Profiles setup for any specific domains.
- There are four types of mail templates used for KMS registration:
 - registrationEmailTemplates (verification mail)
 - confirmationEmailTemplates (confirmation mail)
 - passwordEmailTemplates (reset password mail)
 - passwordConfirmEmailTemplates (password updated successfully)
- Each template has the following configurations:
 - languageCode - for events supporting multiple languages. You may configure a mail template per local.
 - subject - the subject that will be displayed in the mail
 - template - the body of the mail in HTML
- All mails support the following tokens: {FIRSTNAME} {LASTNAME} {COMPANY} {COUNTRY} {EMAIL} {URL} {QRCODE}
- You can add a template per local code by clicking + **addRegistrationTemplate**.

Configure

emailFrom - Enter the email sender.

+**addRegistrationTemplate** - Click to add a template per local code. Configuring this section adds localized versions of a specific email template.

templateName - Enter a template name that will be used to identify the template, for example: **Confirm Registration and Set Password**.

localizedTemplate - Templates for a specific locales. When no locale fits - the template for En (English) is used.

languageCode - The template language code. The default is En (English), and is used when no other selection fits.

subject - The email subject, for example, **Email confirmation and set password**.

body - The email body. Supported tokens - {FIRSTNAME} {LASTNAME} {TITLE}
{COMPANY} {COUNTRY} {EMAIL} {URL} {QRCODE}

[template("cat-subscribe")]
