

Modules

Accessibility

Field	Description
enabled	Enable the Accessibility Module.
showContrastButton	Show a button that allows users to toggle contrast on site pages
loadMore	Navigate to the Application module to enable the load more button at the bottom of each media list.

Addcontent

Field	Description	
enabled	Enable the Addcontent Module.	

Addtoplaylists

Field	Description
enabled	Enable the Addtoplaylists Module.
allowCreation	Allow users to create new playlists from the 'Add to Playlists' module
ownerOnly	Enforce that only the content's owner will be allowed to add to playlists from media page

Advancedkauth

Enable this module for Registration configuration. This module is used for the login and password, reset functionality.

Field	Description
enabled	
linkExpiration	expiration (in seconds)
resetPasswordEmailTemplate	email templates as configured in the EmailTemplates module . Use the template for the Forgot password request.
passwordConfirmEmailTemplate	email templates as configured in EmailTemplates module. Use the yemplate for the confirmation of a password change.

Attachments

Enable this module to:

- Allow media owners to attach files of any type to their media,
- Enable media viewers to download the file before, during or after viewing.

Field	Description
enabled	Enable the Attachments Module.
showOnlyAttachmentType	Enabling this will cause transcript files (created by APIs for example) to not show in the attachments tab.
allowAnonymous	Enabling this will allow anonymous users to view and download attachments.

Captions

Field	Description
enabled	Enable the Captions Module.
thumbnailRotator	Enable thumbnail image rotation on mouseover in the captions search results
entriesPageSize	How many entries are displayed as captions search results on each page? (The default is 10)
captionsPageSize	How many caption lines are displayed for each entry in search results? (The default is 5)
allowToggleDisplayOnPlayer	Select "Yes" to allow the user to decide whether to display the caption on the player.
allowEditCaptions	Select "Yes" to enable the Caption Editor button in the Captions tab.
maxCharsPerLine	Editor: Max char per caption line.
preventSaveOnOverlap	Editor: do not allow saving changes if there is time overlapping.

Channelplaylists

There are three admin modules used to configure the Channel Playlists: For reference, the Channelplaylists modules are used to create and modify course playlists.

- Channelplaylists
- [PlaylistPage](#)
- [Embedplaylist](#)

Field	Description
enabled	Enable the ChannelPlaylists Module.
channelPlaylistsTabName	The title of the tab which will be added to the channel (Media Gallery) and will be presented first.
entriesSource	Add media to the playlist from the channel gallery itself, from My Media or from all entitled areas in the site.

From this page you can:

- [Enable the Course Playlists feature](#)
- [Rename the Channel Playlists Tab's name](#)

Enabling Course Playlists

Course Playlists (Channelplaylists) activated by default for the KAF LTI instances.

To enable Course Playlists

1. From the **Channelplaylists** page change the setting in the **enabled** field from **No** to **Yes**.
2. Click **Save** to apply the changes.

Renaming the Playlists Tab

Admin users can rename the Playlists tab that appears in Media Gallery page:

To rename the Playlists tab

1. From the **Channelplaylists** page change the setting in the **CoursePlaylistsTabName** field from **Playlists** to any value you want.
2. Click **Save** to apply the changes.

Chapters

⚠The minimum player version required for this module to work is v2.26. The Chapters module is mandatory for the [Kalturacapture](#) module but can also work independently, without it.

Field	Description
enabled	Enable the Chapters Module.
enableFullDeck	Enables the ability to upload a document / presentation file as slides.

For additional information about chapter see the article [The Kaltura Player-Editing/Deleting Chapters and Slides](#).

Comments

Field	Description
enabled	Enable the Comments Module.
channelCommentsProfileId	Custom Metadata profile Id for channels
entryCommentsProfileId	Custom Metadata profile Id for entries
entryCommentsCountProfileId	Custom Metadata profile Id for entry comments count
commentsAllowed	Who can add comments?
pageSize	Number of comments to display
sort	Sort comments by newest or oldest first?
sortReplies	Sort replies by newest or oldest first?
allowClose	Allow content owners to disable/close comments for particular entries
showInGalleries	Enable/disable showing of comments for entries in

Field	the gallery page Description
showInChannels	Enable/disable showing of comments for entries in the channels page
showInChannelsOnly	Show comments on media entries to users only in the context of a channel/gallery. In this case, users will not be able to see media comments if browsing to the media from search results, my media or any other context that doesn't include the context of the channel/gallery. To enable this feature, from the KAF Admin > Comments set showInChannelsOnly to Yes.
showAddTimedCommentsCheckbox	Show Add comment at mm:ss checkbox.
showPrivateCommentsConfig	Show configuration for setting private comments per gallery/channel

Contentpolicy

Field	Description
enabled	Enable the Contentpolicy Module.
contentPolicyText	Content policy for my media entries and channels. Use [b]foo[/b] - for bold, [i]foo[/i] - for italic. Full list here.

Cssupload

Use this module to upload CSS files to your KMS site.

Field	Description
enabled	Enable the Cssupload Module.
bootstrap	Upload a replacement bootstrap.min.css file to the one in use by KMS. Only useable for Bootstrap based themes.
additional	Upload an additional css file to KMS to include additional classes not defined as part of the standard Bootstrap CSS file.

Customdata

Field	Description
enabled	Enable the Customdata Module.
profileId	What is the ID of the custom metadata? Copy the custom data schema ID from KMC > Settings > Custom Data (http://www.kaltura.com/index.php/kmc/kmc4#account metadata).
requiredFields	Select which custom data fields are required before a media can be published.
privateFields	Select the custom data fields to hide from viewers in the application. Note: Private custom data fields remain visible to the media owner and co-editors in the Edit Entry page.
hiddenFiltersFields	Which custom data fields will not be available as a search filters.
showInSearchResults	Allow custom data to be searchable

Customfavicon

MediaSpace Administrators can set a custom favicon, which is a small, iconic image that represents your website. Favicons are most often found in the address bar of your web browser, but they can also be used in lists of bookmarks in web browsers and feed aggregators. The KMS Admin can upload an image file through the faviconName field in this module.

Please visit [this Wikipedia article](#) for a complete list of supported icons file types by different browsers. Note that ICO file type is not supported.

Field	Description
enabled	Enable the Customfavicon Module.
faviconName	Click Upload and select an image file.
favviconURL	Click Reset to reset to the default file.

Custompages

About

The **Custompages** module provides the ability to create new site pages from template pages that were created in the [TemplatePages](#) module.

The admin can use the **Custompages** module to select a template, set its URL and permissions, and publish the page.

Learn more about the use of the template and custom pages in the [Create and use a template page](#) article.

 Note: KMS only Module. Depends on the [Theming module](#).

Getting started

Before working with the **Custompages** module, created at least one page is the **templatepages** module, navigate to the **Custompages** module at `https://{your_site_url}/admin/config/tab/custompages` and click the "Add CustomPage" button. This will allow you to create a page from any of the template pages.

Enable a Page

The creation of a page provides the following

1. **Availability** - If the page ready to be used set the ***Published*** field to 'Yes'. As long as it is set to 'No', the page will not be available to any user.
2. **Template Page** - Using the ***pageTemplate*** dropdown list - showing all the template pages - choose a template page for this custom page.
3. **Path/URL** - Select the custom page's URL using the ***pageSlug*** field.
 - a. Enter alphanumeric only with no spaces, with special care for capital letters (recommended not to use capital letters). Signs such as *Underscore* (" _ ") are accepted, however, do not use *Space* (" ").
 - b. The results will be a new URL in the application `https://{your_site_url}/{slug}` (e.g. Enter the slug 'help' to create a help page in the <https://mykmsite.kaltura.com/help> URL).
4. **Permissions** - Choose who can navigate to the selected page using the ***permission*** field.
 - a. The selection is of a minimum role, starting with everyone, up to a limited availability.
 - b. To allow this page for guests/anonymous users:
 - a. Set 'anonymousRole' to allow guests to view the page if your site is set to support anonymous users (set from the auth module).
 - b. If your KMS does not support anonymous users, choose 'guest override' to make this page public to all users.

Disclaimer

KAF administrators can enforce the Terms of Agreement text and checkbox for end-users to review and/or accept before uploading or publishing content.

Field	Description
enabled	Enable the Disclaimer Module.
disclaimerProfileId	The disclaimer custom data profile id.
disclaimerField	Which custom data field is required to be checked when uploading or publishing media?.
disclaimerText	Text to show when explaining user the reason for this checkbox.
agreeText	The text to display next to the checkbox that the user accepts the terms of agreements.
displayArea	<p>Before Upload - Terms of agreement are displayed to the user before they can contribute content. Only after the user agrees, the upload, launch screen recorder and other buttons are displayed. After checking the box, the button (or other option to upload) is enabled and the checkbox is disabled so it cannot be unchecked.</p> <p>Before Publish - Terms of agreement are presented as part of metadata in the upload screen and in the edit media screen. The checkbox can be configured as a required field preventing the user from publishing media if the checkbox is not selected (This is the same behavior as when required metadata is not completed). After terms are agreed to by the user (The checkbox is selected and saved) the field turns into view only and select cannot be unchecked,</p>
agreeRequired	This is relevant only if selected to show before publish. In this case the module displays the text of the terms of agreement and does not display a checkbox for the user to select.

Downloadmedia

Enable this module to configure downloadable versions of the media for viewers to download from the media page.

Field	Description
enabled	Enable the Downloadmedia Module.
downloadRoles	Select one or more roles that can use the Downloadmedia module.
downloadFlavors	Click Add Download Flavors to configure the flavors that will be visible to the media owner to choose from. You, the admin, choose as many flavors as you want from the list of the transcoding profiles, as they appear in the KMC. You then can name the flavors as they should be displayed to the media owner. If no name is given, the flavor default name in Kaltura is used as the default name. The final list that is displayed to the media owner includes the list that was chosen by the admin, the flavors that are actually set (in the KMC) for this KAF instance and all other available flavors on the specific entry. It is advised that the KAF admin will verify with KMC admin what flavors are checked for the account beforehand.

Example of Downloadmedia Configuration

downloadFlavors

1 **DELETE**

flavorId

SD/Small - WEB/MBL ▼

Select a flavor which will be available to be downloaded via the native app.

name

mobile

Enter the label for the flavor.

2 **DELETE**

flavorId

Basic/Small - WEB/ME ▼

Select a flavor which will be available to be downloaded via the native app.

name

small

Enter the label for the flavor.

3 **DELETE**

flavorId

SD/Large - WEB/MBL ▼

Select a flavor which will be available to be downloaded via the native app.

Editor

The Editor Module activates the Kaltura Video Editing Tools.

Field	Description
Enabled	Enable the Editor module.
enableClipping	Should users be allowed to use the editor to clip entries?
enableTrimming	Should users be allowed to use the editor to trim entries?
showClipAttribution	Should a clipped entry page contain an attribution to the original entry?

Field	Description
clipperPromoteId	Metadata promise ID for clipping permissions. Owners and co-editors can decide whether the media is allowed to be clipped by other users.
keaPlayerId	What is the player ID of the player used in Kaltura Video Editing Tools? Leave empty to use the default. \
keaDocumentationURL	What is the link to the custom Kaltura Video Editing Tools documentation. Leave empty to use the default.
keaPreviewPlayerId	What is the player ID of the preview player used in Kaltura Video Editing Tools? Leave empty to use the default.
keaCustomCss	Upload CSS file. .
downloadLocales	Download a zip file which contains all texts for all built-in locales. These can be used to create custom languages.
uploadCustomLanguage	
languageCode	Select the language code. Note that the selected language code should match an existing localized version of the application.
localeFile	Upload your customized .json file.

Emailnotifications

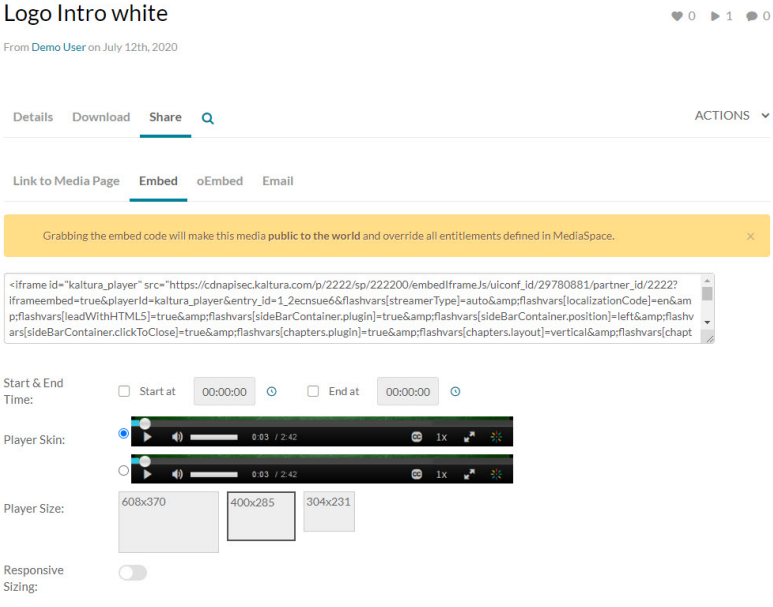

This module should be enabled if you choose to get Email Notifications. For more information on how to set up notifications and the different types of notifications, see [Email Notifications](#).

Click on the dedicated page link in this screen to get to the page where you can enable the different email notification events and define the email templates for each. See the

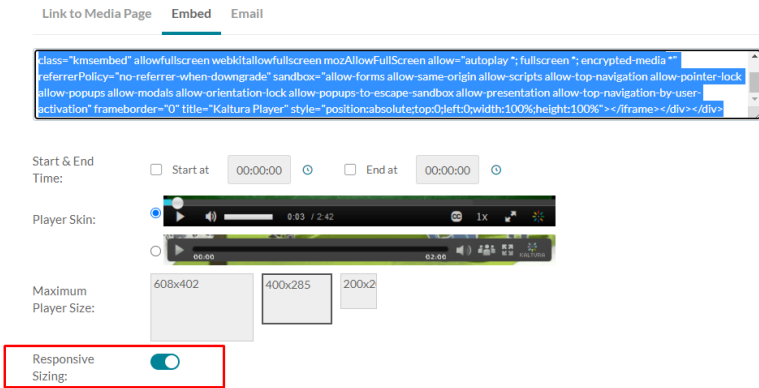

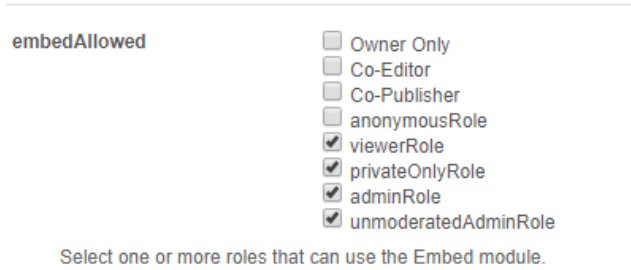

section on [Setting Email Notifications and Channel Subscriptions](#) for more information.

Field	Description
enabled	Enable the EmailNotifications module.

Embed

Field	Description
enabled	<p>Enable the Embed module.</p> <p>When enabled, the Share & Embed tab is displayed on the Media Page.</p> 
secureEmbed	<p>Use secure embed. MediaSpace entitlements are enforced on media that is embedded in external sites. When embedding restricted or private media to your sites and blogs, you will be prompted to authenticate (if not already authenticated). If a user is authorized to watch the media according to the entitlements defined in MediaSpace, the media will play. Otherwise, a message will be displayed that they are not authorized to watch the media. For additional information about this feature, see the article: Enhanced Settings for Secure Embed in KMS/KAF.</p>

autoRedirect Field	Description
	Select True to automatically-redirect the user to the SSO login page in case the user is not authenticated with MediaSpace (If the user is globally authenticated, they will be auto-authenticated by MediaSpace then redirected back to the page with the video). Select False to display a message to the user so that the user can manually select when/whether to re-authenticate.
autoRedirectIframe	When autoRedirectIframe is disabled (default), the redirect for authentication will use the top browser window. When autoRedirectIframe is enabled, the redirect will occur in the iframe
autoRedirectMessageHTML	HTML text to display while the user is auto-redirected to the login page.
notAuthenticatedHTML	HTML text (may include links) to display inside the iFrame if autoRedirect is set to False
notAuthorizedHTML	HTML text (may include links) to display inside the iFrame in case Kaltura Entitlement authorization fails
noCategoryEmbedAccessHTML	HTML text (may include links) to display inside the Embed tab of an entry page accessed not via a category/channel/gallery, when requireCategoryContext=Yes
noCategoryPlayAccessHTML	HTML text (may include links) to display inside the iFrame, in case category-level embed grab and play are disabled for the category/gallery from where embed was originally grabbed, and/or when requireCategoryContext=Yes and a (legacy) secured embed is missing a category context.
overrideCSSURL	URL to an alternate CSS, to allow a customer to customize the iFrame design to fit corporate style guide
categoryLevelEmbed	Allow KMS category/channel (or KAF course gallery) managers to prevent grabbing and playing embed

Field	Description
requireCategoryContext	<p>Set to Yes, in conjunction with <code>categoryLevelEmbed=Yes</code>, to make sure embeds are only grabbed from category/gallery contexts. Grabbing an embed from a regular (context-less) entry page will not be allowed. NOTE: Setting this to Yes will cause secured embeds that lack a category context to stop authorizing playback</p>
allowEmbedIframeShare	<p>Allow/Restrict sharing using 'iframe'. This configuration is only supported for non v2 supported players</p>
embedResponsiveness	<p>Enable/Disable 'Responsive Sizing' option in the embed view.</p> <p>When enabled, the Responsive Sizing toggle button is displayed on the Share & Embed tab.</p> 
embedAllowed	
embedSkins	<p>Define skins that can be used for embedded players.</p> <p>When enabled, the Player Skin options are displayed on</p>

Field	the Share & Embed tab. Description
	<div> <div>Link to Media Page Embed Email</div> <div> <pre>class="kembed" allowfullscreen webkitallowfullscreen mozAllowFullScreen allow="autoplay"; fullscreen "; encrypted-media "" referrerPolicy="no-referrer-when-downgrade" sandbox="allow-forms allow-same-origin allow-scripts allow-top-navigation allow-pointer-lock allow-popups allow-modals allow-orientation-lock allow-popups-to-escape-sandbox allow-presentation allow-top-navigation-by-user- activation" frameborder="0" title="Kaltura Player" style="position:absolute;top:0;left:0;width:100%;height:100%"></iframe></div></div></pre> </div> <div> <div>Start & End Time:</div> <div> <input type="checkbox"/> Start at 00:00:00 <input type="checkbox"/> End at 00:00:00 </div> </div> <div> <div>Player Skin:</div> <div>  </div> </div> <div> <div>Maximum Player Size:</div> <div> <div>608x402</div> <div>400x285</div> <div>200x2</div> </div> </div> <div> <div>Responsive Sizing:</div> <div><input checked="" type="checkbox"/></div> </div> </div>
name	What is the name of the skin? The skin name is displayed when the user selects an embedded skin.
imgFile	What is the relative path to the image file on the server? The image file represents how the skin looks.
uiConfId	What is the numerical value of the player ID to use in the embed code?
embedSizes	<p>Define sizes that can be used for embedded players. Define the player size in the following format: {width}x{height}</p> <ul style="list-style-type: none"> large 608x402 medium 400x285 small 304x231 <div> <div>Link to Media Page Embed Email</div> <div> <pre>class="kembed" allowfullscreen webkitallowfullscreen mozAllowFullScreen allow="autoplay"; fullscreen "; encrypted-media "" referrerPolicy="no-referrer-when-downgrade" sandbox="allow-forms allow-same-origin allow-scripts allow-top-navigation allow-pointer-lock allow-popups allow-modals allow-orientation-lock allow-popups-to-escape-sandbox allow-presentation allow-top-navigation-by-user- activation" frameborder="0" title="Kaltura Player" style="position:absolute;top:0;left:0;width:100%;height:100%"></iframe></div></div></pre> </div> <div> <div>Start & End Time:</div> <div> <input type="checkbox"/> Start at 00:00:00 <input type="checkbox"/> End at 00:00:00 </div> </div> <div> <div>Player Skin:</div> <div>  </div> </div> <div> <div>Maximum Player Size:</div> <div> <div>608x402</div> <div>400x285</div> <div>200x2</div> </div> </div> <div> <div>Responsive Sizing:</div> <div><input checked="" type="checkbox"/></div> </div> </div>

For additional information, please see [Share & Embed Media Via Media Page](#).

Embedplaylist

The configuration page dedicated to activating and configuring the Embed Feature is accessed from the **Configuration Management** page **Modules** sub-category **Embedplaylist**.

 This module is only relevant for Mediaspace (not for KAF applications).

Clicking **Embedplaylist** opens the Embed configuration page.

From this page you can:

- View a description of the module
- Enable the Embed Feature
- Choose to use secure embed
- Select one or more roles that can embed playlists (i.e. use the Embed Playlist feature)
- Choose to allow users to embed channel playlists
- Set the player(s) a user can use to embed playlists

Field	Description
enabled	Enable the Embedplaylist module.
secureEmbed	Choose Yes to use secure embed or choose No not to use secure embed.
playlistEmbedAllowed	Select one or more roles that can use the Embed Playlist feature. Use 'Ctrl' to select multiple roles.
channelPlaylistEmbedAllowed	Choose Yes to allow users to embed channel playlists or choose No not to allow users to embed channel playlists.
players	<p>Enter information about the players a user can use to embed playlists - one being horizontal and one being vertical. The first player in the list is used as the default player.</p> <p>Add additional players by clicking the + Add "players" blue button.</p> <p>Delete players by clicking the DELETE red button.</p>
playerDisplayName	Type a player name that displays to users.
playerId	Type the player ID found in the KMC studio.
embedSizes	Select the embed sizes for the player.
embedSizeCustom	Type a custom embed size ("width"x"height" in pixels). Add additional custom embed sizes by clicking the + Add "embedSizeCustom" blue button. Delete custom embed sizes by clicking the DELETE red button.

Entrydesign

Enable the entryDesign Module to allow media owners and co-editors to specify the look and feel of the entry view page.

Field	Description
enabled	Enable the Entrydesign module.
entryDesignRole	Roles or specific users that are allowed to design entries.

Field	Description
players	Fill in the player ID and the player display name you want to allow users to use in the entry page. If left blank, the site's default player is used.
+Add "Players"	
playerDisplayName	Enter the Player Display Name.
playerId	Enter the Player ID.
entryType	Select an entry type from the drop down menu.
showEmbedPlayerOption	<ul style="list-style-type: none"> • Force Entrydesign Player in Embed Code - Owner/co-editor will not see "Set as Embed Player" button. Players designated in the Embed module will be overridden. If selected, designated Entrydesign player will be used in the embed code of the Share area. • Use Embed Module Players - This is the default option which disables this feature. Owner/co-editor will not see "Set as Embed Player" button. The embed code in the share area will use the settings designated in the Embed module. • User Selects - Owner/co-editor will see "Set as Embed Player" button. Players designated in the Embed module will be overridden. When selected, this player will also be used in the embed code of the Share area.
allowedElements	Which elements should be customizable in the entry page display.
allowCSS	Set to yes to allow the entry owner to use CSS to change the look and feel of the page.
allowLogoChange	Set to yes to allow the entry owner to set a new logo for KMS when viewing the entry.
showLastArchived	Select Yes to allow live entry owners to change the default settings of

showing a link to the last archived video on top of the live page.

Facebook

Add the open-graph metadata to the view media page to support embedding videos in a Facebook feed by simply copy and pasting the URL of the media page.

To use this feature 'allowAnonymous' in 'auth' module must be enabled as well and 'Default Entitlement Enforcement' on the partner should be disabled

Field	Description
enabled	Enable the Facebook Module.
fPlayerId	What is the player ID (uiConf ID) of the player that plays videos on Facebook?
useHighestQuality	Use the best quality flavor that can be played in Facebook.
siteDescription	Enter the text to send on the 'og:description' property for the shared link for non-player pages.
shareImageUrl	Enter a link to an image you would like to use when users share content for non media pages (such as home page). Leave empty to use the site logo.

Headermenu

 This article is designated for administrators.

About

Use this module to define the items that are displayed on the top right on the header menu. This module is also used to configure the My Profile Page whether in the user drop down menu or on the header itself.

Getting Started

enable - Enable the Headermenu module.

addMenu - Click to define the items that are displayed on the top right in the header menu

Configuration

Configure the following fields.

type - The type may be My Media, My Playlists, URL, Menu, My Channels, My History,

My Live Rooms. My Profile Page.

label - For a URL, enter the URL label. For a Menu, enter the label.

link - Enter a URL. The URL may link to external sites (should start with http://) or an internal page (should start with /).

sameWindow - Select whether the link should open in new window (target = _blank) or in the same window. This is applied to external links only (absolute URLs).

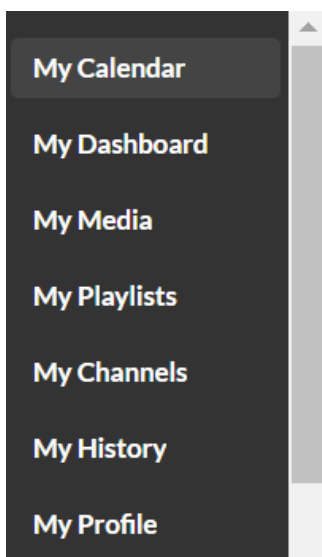

linkLocation - Select whether the link should appear in the **Header** or in the **User Drop Down**.

Example

To add the My Profile page to the user menu:

Click "Add menu" and set the new menu item as follows:

- Type = URL
- Label = My Profile
- link = /profile
- sameWindow = Yes
- linkLocation = User Drop Down

To add the My Profile page to the header:

Click "Add menu" and set the new menu item as follows:

- Type = URL
- Label = My Profile

- link = /profile
- sameWindow = Yes
- linkLocation = Header

Related Modules

- [Theming](#)
- [Personalprofile](#)

History

The History module makes it easy to find videos you recently watched by allowing the end users to reach the “My History” page and view their watch history. You can control your watch history by deleting your history. You can delete individual items or delete your entire history.

Field	Description
enabled	Enable the History Module.
resumePlayback	Enable the "Resume Playback" feature. This feature will enable an indicator bar below the thumbnail of videos, showing the progress of the user in it.
resumeplaybackOptions	
videoEndPercent	Reaching this percentage of the video or higher will count as 'finished watching' the video
videoEndSeconds	Reaching this amount of seconds before the end of the video or lower will count as 'finished watching' the video
barColorBackground	The color of the progress bar background
barColorDone	The color of the finished progress bar
emptyHistory	Fill in the message the users will see when reaching an empty History page.
deleteAllText	Fill in the message the users will see when clicking on the clear all history button.
showUnlisted	Show/hide 'unlisted' entries from the users history.
supportSecureEmbed	Allow videos in a secure embed to be added to the user's history.
addToHistoryTrigger	Choose the way videos are added to the user's history. Play - videos will be added with a play click. View - videos will be added by landing on the video page. (Entries of type image will always be triggered by view event)

Home

Use this module to configure your MediaSpace home page/landing page. For more information see [Setting the Home Page - Kaltura MediaSpace](#).

Field	Description
enabled	Enable the Home Module.
thumbnailRotator	Enable thumbnail image rotation on mouseover in homepage
carouselEnabled	Show the carousel.
carouselInterval	interval (in miliseconds) between carousel transitions
carouselStyle	Select carousel style.
carousel	
type	<p>Select content for the Carousel:</p> <div> <p>Most Recent - All published videos in channel or categories by creation date</p> <p>Most Viewed - All published videos in channel or categories by number of plays</p> <p>Most Liked - All published videos in channel or categories by number of likes</p> <p>Trending Now - Most played media in the last 24-48 hours</p> <p>Trending this week - Most played media in the last 7 days</p> <p>Trending this month - Most played media in the last 30 days</p> <p>Most Commented - All published videos in channel or categories by number of comments</p> <p>Recently Watched - Individual user's viewing history</p> <p>Continue Watching - Individual user's history of none-completed videos</p> <p>Custom Playlist</p> <p>Channel Content</p> </div>
carouselBg	carousel background color
lists	To add playlists to your home page. You can use playlists that have been configured in the KMC.
type	Select content for the list from the type drop down.
Name	<p>Enter the list name to display.</p> <p>Choose "custom" to enter a KMC playlistid.</p>

Hotspots

Hotspots are an extra layer of info on top of the player with the option to link them to an external URL or specific time in the video.

Minimum supported player version: 2.75 [Click here](#) to navigate to the KMC Universal studio. Please make sure to update the [Entrydesign](#) module players to version: 2.75 in the KMC Studio.

If there are players used in the KMS/KAF instance that do not meet the minimum player requirement, an alert is displayed listing those players with their UIconf IDs.

The ability to Save the Hotspots module's configuration is available only after upgrading legacy players.

Field	Description
enabled	Enable the Hotspots Module.

Importchannel

Channel/Media Gallery Managers have the ability to import content from other Channels/Media Galleries they manage.

Field	Description
enabled	Enable the Importchannel Module.

Kalturacapture

Creates Kaltura capture entries using the Kaltura Capture application.

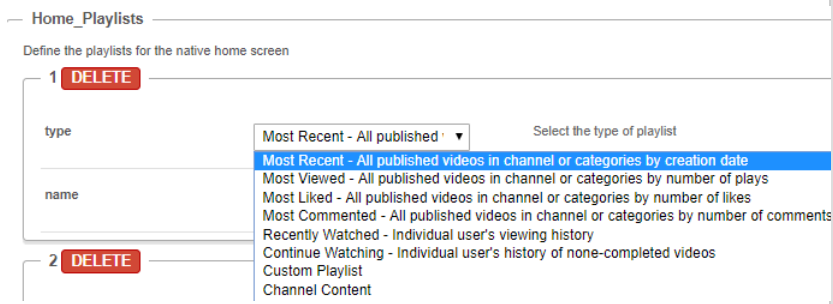

Field	Description
enabled	Enable the Kalturacapture Module.
AllowDownloadingClient	Allow end users to download the Kaltura Capture desktop application from KMS/KAF.
AddNewLabel	Add new Kaltura Capture label.
allowedRoles	Who can create Kaltura Capture? if a role is selected, any role above it will also be able to create Kaltura Capture.
entryURL	What URL to show the user after the captured media is uploaded. Leave blank for KMS base URL.
enableBSE	[KAF ONLY] Enable launching Kaltura Capture from Browse, Search, and Embed module.
limitAppToken	Select 'Yes' to limit the time of the Capture application token to 12 hours.

Kmsapi

Use this module to enable the KMS Go application on your mobile device.

For more information about the KMS Go mobile app, see the articles about [Kaltura MediaSpace Go \(KMS Go\)](#).

Field	Description
enabled	Enable the Kmsapi module.
IOSAppId	The Apple Application ID that will be used when smart banners on iOS Safari will be displayed.
iOSBundleId	The Apple application id that will be used when smart banners on IOS Safari will be displayed.
AndroidAppId	The Android Application ID that will be used when smart

Field	banners on Android mobile browsers will be displayed. Description
deepLinkSubDomain	The iOS/Android branded application subdomain. Used for deep-linking
storeAppName	The name of the branded mobile application
appStoreAppId	(iOS) Your app's App Store ID, used to send users to the App Store when the app isn't installed
storeAppLogoUrl	The URL for the branded application logo. Image dimensions: 64x64 pixels. Keep empty to use default
homeCarouselMode	Use Web home carousel configuration or configure it manually for mobile.
Home_Playlists	<p>Define the playlists for the native home screen. You can add and delete playlists using this field.</p> 
DELETE or +Add Home_Playlists	
type	Select the type of playlist from the drop down menu.
name	Enter the playlist name that will be displayed.
channelId	(Channel Playlists only) Enter the custom channel id for Channel Playlists
playlistID	(Custom Playlists only) Enter the custom playlist id.

detailsView Field	Description
	(Custom Playlists only) When set to 'No', the default view of playlist (Thumbnail view) will be used.
playerAutoPlayOnLoad	When entry page loads, should the video begin playing automatically?
mobileSessionLifeTime	The length of a mobile KMS user session (in seconds). Note that every KMS SaaS version deployment will force a new session (on the appColorR of the value input here).
appColorR	The R value for RGB that is used as the custom brand color of the application. Input a number between 0-255. Note: RGB.alpha fields cannot be partially filled out.
appColorG	The G value for RGB that is used as the custom brand color of the app. Input a number between 0-255. Note: RGB alpha fields cannot be partially filled out.
appColorB	The B value for RGB that is used as the custom brand color of the app. Input a number between 0-255. Note: RGB alpha fields cannot be partially filled out.
splashImageUrl	Set an image URL for the KMS app splash screen. Use an image size of 192x131. The URL must be a secured URL (begin with https://).
downloadEnabled	Enable to allow downloading media for offline viewing.
downloadQuality	Chooses the rendition/flavor of the video to be available for users to download for offline playback. High will download the highest quality possible (in terms of dimensions and bitrate) and low the lowest.
downloadToGoQuality	Chooses the quality of the video to be available for users to download for offline playback.
smartBannerEnabled	Enable smart banner for Android and iOS applications
dontShowLoginInMvPage	Don't show login button in mv page

Field	Description
uploadEnabled	Enable displaying the upload functionality.
showMySubscriptionSection	Enable displaying the list of channels the user is subscribed to, on top of the home screen.
playlistContinuousPlay	Select whether the playlist entries should play automatically one after the other.
allowPushNotifications	Allow push notifications.
hideInspireMe	Selects whether to hide the inspire me section
hidePublisherName	Selects whether to hide the entry's publisher name
iosTermsOfUse	Add the terms of use that will be displayed to the user on IOS devices. Note: For translation fill this field with 'terms_of_use_ios' and translate via PO file
androidTermsOfUse	Add the terms of use that will be displayed to the user on Android devices. Note: For translation fill this field with 'terms_of_use_android' and translate via PO file
spotlightSearchEnabled	Enable spotlight Search from outside the application on IOS.
adTagUrl	Add the URL for the IMA (Interactive Media Ads) to enable DFP (DoubleClick for Publishers - showing ads on top of videos)
idleTimeout	Max allowed idle time before sessions timeout (in seconds). To disable idle timeout, enter 0.
disableIosBackgroundSnapshot	Disable the cache background snapshot in iOS.
shareUrlAsDeepLinks	Selects whether the share URLs will be deep links.
deleteRecordedContent	Once enabled, content that is recorded using KMS Go will not be stored on the user's device after upload.
appleAppSiteAssociation	Add the apple-app-site-association response for deep linking.

webAuthenticationLogin Use web authentication login instead of webview login.

Meetingentry

 The **Newrow** Module must be enabled in order to activate this module.

Enable this module to be able to create, publish, and search for Kaltura Meetings Rooms in the site.

Field	Description
enabled	Enable the Meetingentry Module.
allowedUsersOrRoles	Who can create a Kaltura Meeting room. <div> privateOnly Role ▼ </div> <div> privateOnly Role admin Role unmoderatedAdmin Role Specific Users / Groups </div>
advanceEntrance	How long (in seconds) before the event is scheduled to begin, can attendees join the Meeting Room, if a moderator started the room.

Oembed

The oEmbed Endpoint in KMS is able to accept the entry page URL as input and not only the copied link from the 'share / oEmbed' tab.

In addition to this type of URL:

https://[MediaSpace URL]/id/[entry ID]?width=400&height=285&playerId=12345678

this type of URL may be used:

https://[MediaSpace URL]/media/[Entry Name]/[Entry ID].

This improves the flexibility with oEmbed-supported destinations.

Field	Description
enabled	Enable the Oembed Module.
type	Which type of oEmbed code should be displayed? 'Short' is the common type. For example: http://url.for.mediaspace/id/xyz, where xyz is the media asset ID (entry ID). 'Short' links are valid URLs. A 'Short' link entered in a browser loads MediaSpace with the video loaded in the player. 'Full' is much longer than 'Short.' Use 'Full' when your oEmbed 'consumer' cannot convert a link embed code to a full oEmbed request.
enableCustomization	When a user selects 'oEmbed' for the 'Select Embed Type' option, should the options for selecting a player skin and player size be displayed? Note: If you enable customization, your oEmbed must be able to accept the oEmbed link format that is created.
playerId	What player ID (uiConf ID) should be used to display the embedded video? Note: If you are not sure, enter 'default' (without quotes) or leave the playerId field empty. MediaSpace will use the value of the first embedSkin config.
height	What is the height (in pixels) of the oEmbed player? Enter only the number.
width	What is the width (in pixels) of the oEmbed player? Enter only the number.

Presenters

This module allows you to add users to show as presenters to show on top of media entries. Once enabled, on each edit entry page, a new tab will show, allowing the owner of the entry to add a presenter. Note: This module replaces the [kwebcast](#) presenters, and deletes any users already used in [kwebcast](#) entries.

Field	Description
enabled	Enable the Presenters Module.

Publish

Field	Description
enabled	Enable the Publish Module.
defaultPublishStatusOnUpload	Define the default privacy for each newly uploaded media. Prior to this change, each newly uploaded media's status was set to "Private" as the default. Now, MediaSpace administrators can configure every newly uploaded media to be set as "Unlisted" by default, and allow the media owner to change the privacy mode. To configure this option, set the required value for defaultPublishStatusOnUpload . Note that this configuration is applicable only if Unlisted mode is enabled on your MediaSpace instance. You can check if it is enabled under Application > enableUnlisted.
manPublish	Enable publish to a list of categories - from the menu, media, and upload. Disable this if you do not have access to the list of categories.

REACH

REACH offers two different service options, human captioning and ASR machine transcription, which can be used separately or together. Captions ordered directly within the Kaltura interface are automatically delivered and can be edited for quick review and modification.

Field	Description	Values
enabled	Enable the REACH Module	

enabled	Enable the REACH module.	
reachProfileId	ID of the REACH profile to use with Kaltura MediaSpace or KAF. The Reach profile includes the credit, and other parameters such as: moderation flow, file types etc.	At least one profile must be selected.
orderScreenText	Text to show on the order task form: 1000 characters max.	
unitFieldName	Select a label for the 'Unit' field . If left empty "Unit" will be used.	
availableServices	Allow users to select the following services.	<p>Combinations of all available services, features are TAT.</p> <p>For example:</p> <p>HUMAN, CAPTIONS, THIRTY_MINUTES</p> <p>HUMAN, CAPTIONS, SIX_HOURS</p> <p>HUMAN, CAPTIONS, FORTY_EIGHT_HOURS</p> <p>HUMAN, CAPTIONS, BEST_EFFORT</p> <p>HUMAN, CAPTIONS, TWENTY_FOUR_HOURS</p> <p>HUMAN, TRANSLATION, TWENTY_FOUR_HOURS</p> <p>HUMAN, TRANSLATION,</p>

		IMMEDIATE HUMAN, TRANSLATION, THREE_HOURS HUMAN, TRANSLATION, SIX_HOURS MACHINE, TRANSLATION, SIX_HOURS MACHINE, TRANSLATION, BEST_EFFORT MACHINE, CAPTIONS, THREE_HOURS MACHINE, CAPTIONS, SIX_HOURS MACHINE, CAPTIONS, THIRTY_MINUTES
viewEntryRequestsRole	Select the role required to access the entry task requests screen.	privateOnlyRole adminRole unmoderatedAdminRole Co-Editor Owner
orderer	Select who can order tasks.	Specific Roles Specific Users
orderRole	The minimal role required to order tasks.	privateOnly Role admin Role unmoderatedAdminRole

		Co-Editor Owner
serviceTypeDefault	Select the default service type.	Machine Human
serviceFeatureDefault	Select the default service feature	Captions Translation Alignment Audio Description
sourceLanguageDefault	Select the default source language.	See Source Media Languages .
turnaroundTimeDefault	Select the default turnaround time.	<div> IMMEDIATE ▼ IMMEDIATE BEST_EFFORT EIGHT_HOURS SIX_HOURS TWO_HOURS THIRTY_MINUTES TEN_DAYS TWENTY_FOUR_HOURS TWELVE_HOURS FORTY_EIGHT_HOURS THREE_HOURS </div>
serviceSelectionRole	The minimal role required for service selection.	privateOnly Role admin Role unmoderatedAdmin Role Specific Users
featureSelectionRole	The minimal role required for feature selection.	privateOnly Role admin Role unmoderatedAdmin Role Specific Users

		specific users
TatSelectionRole	The minimal role required for TAT selection.	privateOnly Role admin Role unmoderatedAdmin Role Specific Users
speakerSelectionRole	The minimal role required for speaker selection.	privateOnly Role admin Role unmoderatedAdmin Role
dashboardAccessRole	The minimal role required to approve task requests.	Specific Users admin Role unmoderatedAdmin Role
requestApprovalRole	The minimal role required to approve task requests.	Specific Users admin Role unmoderatedAdmin Role
notifiedUsers	Select specific users who will receive email notifications about items pending moderation. To customize notifications, go to email notifications configuration.	Enter the user name. Existing users may be found using the autocomplete feature: type in the first three characters of the user's name.
trustedUsers	Select users who do not need approvals for their	

	need approval for their requests.	
categoryRuleOrderRole		Channel Manager Channel Owner
captionEditRole		privateOnly Role admin Role unmoderatedAdmin Role Co-Editor Owner
allowProfilePermissions	Allow individual profile configurations.	Select Yes and then configure values for each profile according to the values in this article.

Recorder

Field	Description
enabled	Enable the Recorder Module.
allowedRole	Select the users allowed to use this tool
maxRecordingTime	Set the maximum allowed recording time in seconds. (leave empty to remove limit)
browserNotSupportedText	Select the text to display when a user reaches the tool from a none supported browser. Use HTML to add links (tag)
ConversionProfileId	Fill in a custom conversion profile ID for recordings. Leave the field empty to use the default conversion profile
playerId	Enter the id of the player that will be used to view recorded media before upload. The Player version must be v3.

Recorder

[Kaltura Express Capture](#) requires the Recorder module to be enabled on your partner. The Kaltura HTML recorder allows you to use your webcam and audio devices to record video or audio entries directly from your browser. (The browser must support webRTC.) Please see supported browsers and more information [here](#).

Field	Description
enabled	Enable the Recorder module.
allowedRole	Select the users allowed to use this tool.
maxRecordingTime	Set the maximum allowed recording time in seconds. (leave empty to remove limit).
browserNotSupportedText	Select the text to display when a user reaches the tool from a non supported browser. Use HTML to add links (<a>tag).
ConversionProfileId	Fill in a custom conversion profile ID for recordings. Leave the field empty to use the default conversion profile.
playerId	Enter the id of the player that will be used to view recorded media before upload. The Player version must be v3.
addNewLabel	Select a label for the 'Add New' menu items. If left empty 'Express Capture' will be used.

Related

Field	Description
enabled	Enable the Related Module.
limit	How many related videos can be displayed?

Replacemedia

ReplaceMedia

Media owners can replace their media, while keeping metadata, URL and analytics in place. The same functionality as in the KMC is available in KMS and is configurable in the Replacemedia module.

⚠ Only video entries may be replaced. Any time-based metadata on the entry will be kept in place and may be out of sync with the new media, The metadata should be manually adjusted.

Field	
enabled	Enable the Replacemedia module.

Robots

This module allows advanced MediaSpace admins to configure the rules that search engines will follow when crawling the sites.

When this module is enabled, the site exposes the "robots.txt" file (with the content as configured by the admin).

For more information, please visit:

<http://www.robotstxt.org/robotstxt.html>

https://en.wikipedia.org/wiki/Robots_exclusion_standard

⚠ This module is not relevant when the site is closed only for logged-in users, thus search engines cannot crawl it anyway.

SAML

Please see the [Kaltura MediaSpace™ SAML Integration Guide](#) for the setup configuration.

This module allows you to allow users to Authenticate into MediaSpace using the SAML 2.0 standard.

1. In the SAML module configuration, select Yes to enable the SAML module.
2. Enter values for the following:

Parameter	Description
metadataMode	Select Manual or Automatic.
enableMultildp	Enable using multiple IDPs (requires MultiAuth to be enabled)
loginRedirectUrl	The URL to redirect the user when authentication is required (relevant only if metadata mode is set to Manual).

Parameter	The URL to redirect the user after logo. Description
logoutRedirectUrl	<p>NOTE: This field is only applicable if useInternalLogoutPage is set to "No" and metadataMode is set to "Manual". When the MediaSpace session expires, the user is redirected to this URL, along with a SAML logout request. This request is made via POST request.</p> <p>MediaSpace does not expire login session from the identity provider. For the logout request, MediaSpace uses the value that was provided in the NameID element in the SAML login request.</p>
relayStateUrlParam	The parameter name that the IdP uses to pass the URL to redirect the user back after a successful login. This defines the default place to redirect the user to in case it is not passed as part of request. For example for PingFederate it would be TARGET. For other SAML providers it is typically RelayState.
enableMetadataEndPoint	Customers that require a standard XML response that exposes the metadata configured on the Service Provider side, can use this configuration. This will expose the configured parameters of the SAML module through the following URL: http://[MediaSpace Server]/saml/index/sp-metadata
useInternalLogoutPage	<p>If set to "Yes" logout will expire the MediaSpace session and display message to user but will not redirect to IdP logout page. For example:</p> <div style="background-color: #ffffcc; padding: 5px;"> <p>You have signed out from MediaSpace. For improved security, we recommend that you close all browser windows at the end of your online session.</p> </div>
allowKeepAlive	When Yes, session will be extended upon user's interaction. Default is No.
logoutText	If useInternalLogoutPage is set to Yes you can define a custom message to users. You can use HTML tags to display a message.
shouldNestRelayState	Select whether to concatenate the relay state as query-string or as URL-encoded query string.
shouldPost	When set to Yes, the SAML request will be posted instead of using get. Default is No.
shouldDecodeRelayState	When set to Yes, RelayState will be decoded before redirect..
name	The entity ID of the service provider (MediaSpace) as it was configured in your Identity Provider. For example: https://partner_id.mediaspace.kaltura.com (this will be used as the SP entity ID).

host	<p>The host of the MediaSpace instance. For example: partner_id.mediaspace.kaltura.com.</p> <p>NOTE: The host may be configured only with a single URL per KMS instance. If you are using your own alias for MediaSpace (for example: video.company.com) you should use that alias.</p>
relayState	<p>The value for the relative URL to redirect the user after login if a relay state is not passed as part of the authentication request. The default is “/”.</p>
nameIdFormat	<div> <div>Transient ▼</div> <p>This field is used for SP initiated mode only and will not work if the NameID is not released.</p> <ul style="list-style-type: none"> • Transient - Recommended for Shibboleth setup • Persistent - Preferred setup. • None - set to remove the NameIDPolicy element from the SAML request. </div>
certificate - (optional)	<p>When encryption is required for the SAML response, enter the certificate information. Paste the content of the crt file without the comments line. See Generating a Certificate Workflow.</p> <p>NOTE: You should paste the content without the 2 comment lines:</p> <p>(----BEGIN... and ----END...)</p> <p>All text should be in a single line with no spaces, so remove all the breaklines in the generated file</p> <p>The certificate value is used to encrypt the response provided by the IdP. The following example shows how the crt file would look including the comment lines and the extra line breaks that should be removed:</p> <pre> -----BEGIN CERTIFICATE----- MIICsDCCAhmGAWIBAgIJALM+uZK9gWbQMA0GCSqGSIb3DQEBBQUAMEUxCzAJBgNV BAYTAkFVMRMwEQYDVQQIEWpTb21lLVN0YXRIMSEwHwYDVQQKEWhbnRlcm5ldCBX aWRnaXRzIFB0eSBMdGQwHhcNMTMwNDI0MDgzOTU1WhcNMjMwNDI0MDgzOTU1WjBF MQswCQYDVQQGEwJBVTETMBEGA1UECBMKU29tZS1TdGF0ZTEhMB8GA1UEChMYSW50 ZXJuZXQgV2lkZ2l0cyBQdHkgTHRkMIGfMA0GCSqGSIb3DQEBAQUAA4GNADCBiQKB gQC3PKd3p+a9Yy0TFHuwy6trDlxKwa0FAwrGIBnJCw4V+XgL5JaymRqICo1Vrk3 MEXFD1hf5GuG17Sm1CXA02XAdzJMemr8RcLjq5dqAPP+6ZZ+3JM9owjvy1LRhMMP wCUBDeCI3WNvmNDCpnoJp+mBlgyZpr87ecgaCt2626CRKQIDAQABo4GnMIGkMB0G A1UdDgQWBBTODDBaXbjmbJUJ1+gnD7CFKECmp9jB1BgNVHSMEbjBsgBTODDBaXbjmb JUJ1+gnD7CFKECmp9qFJpEcwrTELMakGA1UEBhMCQVUXEzARBgNVBAGTCINvbWUt U3RhdGUxITAFBgNVBAoTGEIudGVybmV0IFdpZGdpdHMgUHR5IEU0ZIIJALM+uZK9 aWbOMAwGA1UdEwOFMAMBAf8wDOYIKoZihvcNAOEfBOADaYEAo6LDOVKiODxOL7N/ </pre>

host	The entity ID of the identity provider. For example: https://openidp.feide.no
issuer	The entity ID of the identity provider. For example: https://openidp.feide.no
name	Friendly display name for the Identity
certFilePath	Provider (only for self-hosted MediaSpace) The absolute file system path of the crt file provided by Identity Provider.
certFileContent	The content of the certification file provided by Identity Provider that is used to validate the signature of the response.

Complete the following values in the attributes section:

Parameter	Description
userIdAttribute	The SAML attribute containing the user ID. When blank, NameID element will be used.
firstNameAttribute	The SAML attribute containing the first name.
lastNameAttribute	The SAML attribute containing the last name.
emailAttribute	The SAML attribute containing the email.
logoutUrlAttribute	The SAML attribute containing the logout URL. When configured, if useInternalLogoutPage is set to No, the value passed in the attribute will be used instead of the value set in logoutRedirectUrl.

Complete the following values in the defaultRole section:

Parameter	Description
defaultRole	The default role for authenticated SAML user.
allowDefaultRole	Select Yes or No.
role	Select the default role that should be assigned to each user that is authenticated.

Complete the following values in the roleAttributes section:

Parameter	Description
roleAttributes	Map attribute values to KMS roles.
attribute	The SAML attribute name.
value	The SAML attribute value
role	Mapped KMS role.

 If more than one attribute value is found (a user belongs to multiple groups) the user will be mapped to the role that was defined in the last roleAttribute found.

Complete the following values in the roleAttributesCsv section:

Parameter	Description
roleAttributesCsv	Map attribute values to KMS roles. Each CSV row should contain 3 values: attributeName,attributeValue,mediaSpaceRole. Invalid MediaSpace roles would not be saved.
Load new CSV	Click to upload a CSV with role attributes.
storageDataEntryId	Data entry ID that stores the parsed csv data

In the `blockAuthorizationAttributes` (optional) map individual groups and values that are returned in the SAML response and should lead to unauthorizing an authenticated user from using MediaSpace. Complete the following values in the `blockAuthorizationAttributes` section: (Optional)

Parameter	Description
blockAuthorizationAttributes	Mapping of attributes and values that blocks authorization
attribute	The SAML attribute name.
value	The SAML attribute value

The `unauthorizedBehavior` is applicable only if the `blockAuthorizationAttributes` is used. If `usersuseInternalUnauthorizedPage` is in use (set to 'yes') you can optionally set the text to be presented to the unauthorized user. If `usersuseInternalUnauthorizedPage` is not used, you can specify the URL where the user will be redirected to. Complete the following values in the `unauthorizedBehavior` section: (Optional)

Parameter	Description
unauthorizedBehavior	Mapping of attributes and values that blocks authorization
useInternalUnauthorizedPage	Default is 'Yes'. If set to 'No' <code>unauthorizedRedirectUrl</code> will be used.
unauthorizedRedirectUrl	(Optional) The URL to redirect the authenticated, but unauthorized users. Should be used only in cases where the customer wants authenticated users to be redirected to his self hosted page.
unauthorizedText	(Optional) Text to be shown in the internal unauthorized page, leave empty to use the default text.

From the MediaSpace Configuration Management, Go to the [Auth](#) module.

For SP Initiated configuration enter:

- Saml_Model_SplInitiated in the authNAdapter text box and click Add custom value
- Saml_Model_SplInitiated in the authZAdapter text box and click Add custom value

For IdP Initiated configuration enter:

- Saml_Model_IdpInitiated in the authNAdapter text box and click Add custom value
- Saml_Model_IdpInitiated in the authZAdapter text box and click Add custom value

Samlgroupsync

Please see the [Kaltura SAML Group Sync Administrator's Guide](#) for the setup configuration.

Scheduling

Use the Scheduling module to:

- Set Entry's publish schedule to categories or channels.
- Sort and filter entries by scheduling range in my-media.

Field	Description
enabled	Enable the Scheduling module.
dateFormat	Define the date format for the time presented.

Securitytxt

Use the Securitytxt module to enable the “/security.txt” file in the site. The security.txt file is a standard for websites' security information that is meant to allow security researchers to easily report security vulnerabilities. You can read more about it, and also create your own security text in securitytxt.org.

Field	Description
enabled	Enable the Secuirtytxt module.
configSecurityTxt	Enter the content for the security.txt file.

Sidemymedia

Limitations

Only **one** module's sidebar is shown in KAF.

Sidebars from other modules

[Related](#) module for KMS, [Hostedrelated](#) module for KAF.

Field	Description
enabled	Enable the Sidemymedia module.
limit	How many Sidemymedia items can be displayed?
showInCategory	Should the module render the sidebar if in category context?

Sideplaylists

Field	Description
enabled	Enable the Sideplaylists module.
limit	How many items can be displayed in a side playlist?
items	Define playlists to display on the right side next to the player.
label	Enter the playlist label.
id	Enter the ID of the playlist to display.

Ssogroupsync

Please see the [Kaltura SSO Group Sync Administrator's Guide](#) for the setup configuration.

Staticpages

You can add static/content pages to your MediaSpace site. Static pages can be used, for example, to create help pages, privacy policies etc. From the KMS Admin, enable the *Staticpages* module. After you enable the module, you can add multiple pages to your site. Each page should include:

Field	Description
Module Info	
description	Create custom static pages in KMS.
styling	It is best to use Bootstrap css classes in the markup.
custom styling	Use inline styles, or consider using the cssupload Module.
enabled	Enable the Staticpages module.
title	The title of your page to display as the page header
pageSlug	What is the unique semantic slug for your page? (e.g. www.yourvideoportal/<slug>) The unique identifier for the page to be accessed as a URL. For example, if you provide 'privacy' as a slug, you can add links to your static page as [MediaSpace URL]/privacy. You can add these links in Navigation or Headermenu modules or anywhere you want to include links to your pages within the MediaSpace site.
permission	Select the minimum role allowed that can access this page. Set as anonymousRole to keep this page public. Use the "guest override" field to allow anonymous users to access to static pages even if anonymous is turned of in KMS.
content	What is the content of this page? You can use HTML and Bootstrap .

Styling

The Styling Module for MediaSpace and KAF administrators, provides the ability to create a new style based on most common use cases. The tools also allow the admins to view the newly generated KMS/KAF theme prior to setting it up on production and share it with other admins.

For advance theme creation, for which a deep CSS understanding is required, please use Kaltura's [Cssupload](#) Module

Use the link provided in the Description field to access the new Styling Page. You can preview and share the new settings with other admins before applying the changes to the site.

Field	Description
enabled	Enable the Styling Module.
fonts	Select +Add"fonts" These fonts will be available in custom CSS and in the Font selectbox on the styling page
familyName	Font family name that will be used in CSS and will be appended to the Font select box on the styling page.
fallbackFonts	<p>Font families and font types which should be used as a fallback when desired font family is not ready or doesn't exist (comma-separated list, like in CSS specifications).</p> <p>Specifying generic font type (like <code>serif</code> or <code>monospace</code>) is mandatory.</p> <p>Example: <code>'Helvetica Neue',Arial,sans-serif</code></p>
type	<p>Font assets source type:</p> <ul style="list-style-type: none"> • System font - use world-wide supported font by name • Import from URL - use external font service (like Google Fonts) • Upload files - upload your own font asset files
isCssApplied	This field indicates whether the style created in the Styling Module is applied on the site or not. Click Reset to clear all previously set styles.

Templatepages

About

The **Templatepages** module provides admin the ability to create template pages that can be used in other modules, for instance, the [CustomPages](#) module.

The admin can use the **Templatepages** module to create multiple pages, each

containing multiple components. Each template page may then be used in the **CustomPages** module and set with its own unique URL and permissions.

Learn more about the use of the template and custom pages in the [Create and use a template page](#) article.

 Note: KMS only Module. Depends on the [Theming module](#).

Getting started

Navigate to the **Templatepages** module at `https://{your_site_url}/admin/config/tab/templatepages` and click the "Add TemplatePage" button. This will allow you to create a page from any of the template pages. Once you are done configuring, click the Save button, which will save your new page, and will also save and clear the cache for the module and site.

General Page Settings

At the top of your new template page there are 3 general page fields:

1. **pageName** - Enter a name for your page. This name will be presented in other modules when prompted to select a template page from a drop down list. For example, in the **Custompages** module.
2. **pageTitle** - Enter a title for the page. This title will show on the browsers' tabs names.
3. **pageHeader** - Enter a header for the page (optional field). This header will show on the top of the page only when using a Hero component.

Page Elements

There are 3 types of elements on the page that as a page builder you can choose from:

1. Navigation Bar
2. Hero Unit
3. Components

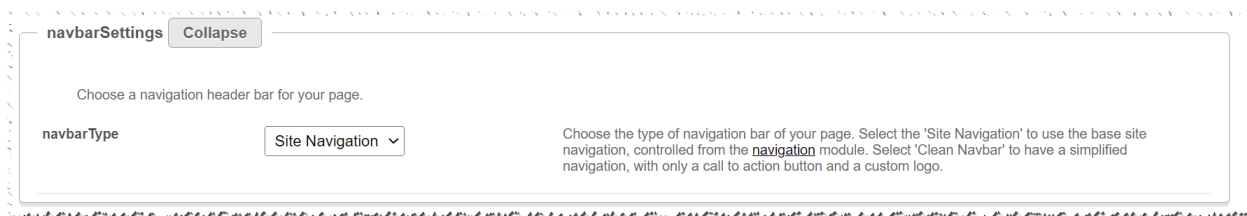

Below you will find the information on each type.

1. Navigation Bar

For each page a navigation bar will be presented. You can select out of two types of navbars:

Site Navigation

This navbar will present the same navbar as the site's navigation. This navbar is controlled from the [navigation](#) module, and will be the same on all the site's pages.

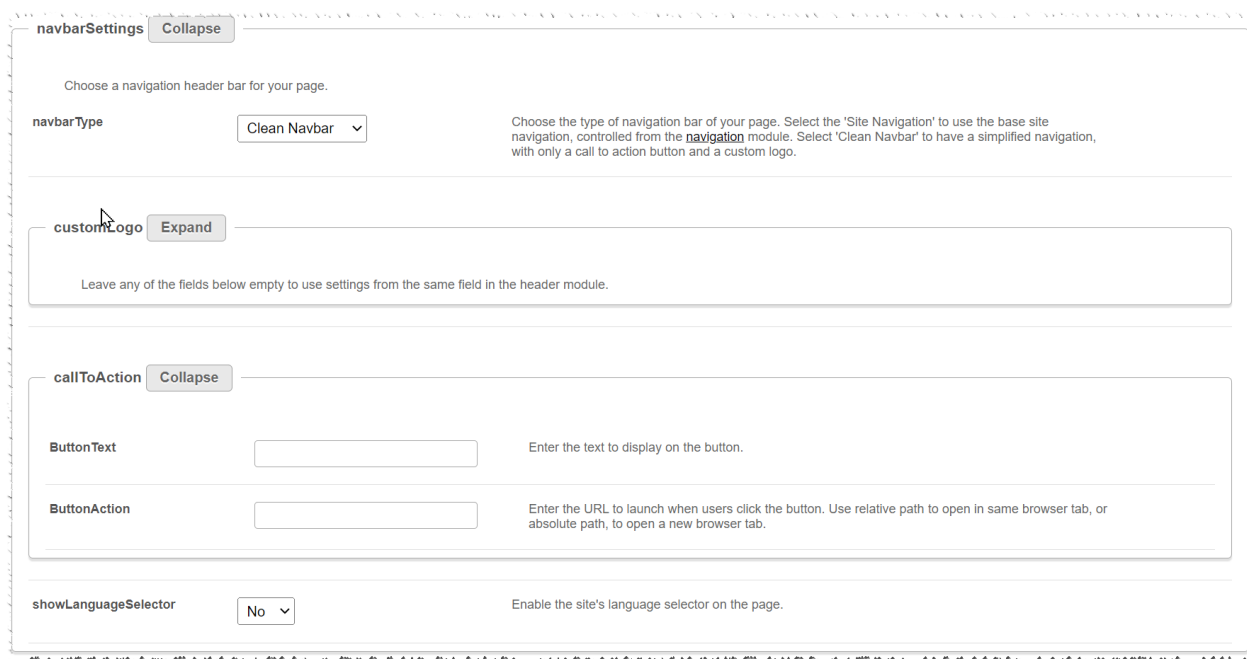

The screenshot shows the 'navbarSettings' form with a 'Collapse' button. The 'navbarType' dropdown is set to 'Site Navigation'. A text box on the right explains: 'Choose the type of navigation bar of your page. Select the 'Site Navigation' to use the base site navigation, controlled from the [navigation](#) module. Select 'Clean Navbar' to have a simplified navigation, with only a call to action button and a custom logo.'

Clean Navbar

This navbar will provide a simplified and clean navigation. Limited to a call to action button and a custom logo, this will provide a different settings for the page.

If a clean navbar was selected, additional features will be available:

1. Which logo to use - Upload your own or use the site's logo using the **customLogo** section.
2. Should you like to present a call to action button, fill in the **callToAction** section.
3. Should you like to present the language selector (assuming it is available on the site), set the **showLanguageSelector** field to 'Yes'.

The screenshot shows the 'navbarSettings' form with a 'Collapse' button. The 'navbarType' dropdown is set to 'Clean Navbar'. Below this, there are three sections:

- customLogo** (with an 'Expand' button): A text box with the instruction 'Leave any of the fields below empty to use settings from the same field in the header module.'
- callToAction** (with a 'Collapse' button): Two input fields. The first is 'ButtonText' with the instruction 'Enter the text to display on the button.' The second is 'ButtonAction' with the instruction 'Enter the URL to launch when users click the button. Use relative path to open in same browser tab, or absolute path, to open a new browser tab.'
- showLanguageSelector** (with a 'No' dropdown): A text box with the instruction 'Enable the site's language selector on the page.'

2. Hero

A hero unit is a component that can only be available at the top of the page. This is for a few reasons, mainly because of the interaction with the navbar and its transparency.

Hero components is not a mandatory on the page.

You can select out of two types of navbars: **Player Carousel, Text & Counter**, Or not to use a hero at all:

Player Carousel

This hero will present a dynamic carousel, playing back a list of live or VOD media on a muted player to create a feeling of a live site and moving elements. The Video is muted, and cannot be played in the ordinary way - you may consider it as a carouse of GIFs.

- **Content** - There are 2 sets of media that can be played on the carousel.
 - Live events list -
 1. Select a category under the application root or external to it, using the **liveCategory** field. Note, that in case an external category is selected, entitlements will apply and hide any media not published in the site.
 2. Live media will be presented per their scheduling time. Meaning, if the event is not live, the player and carouse will not show.
 3. When no media is live at the moment, the hero will fall back to present on the player the VOD list of media.
 4. Scheduled Room type media are not supported.
 - VOD list -
 1. Select a playlist to show using the **vodPlaylist** section. Note that the available playlists types include a custom playlist and a channel playlist.
 2. If no VOD list is selected, the hero unit will not show on the page.
- **UI/UX** -
 - To select the carousel transitions interval (in seconds) use the **carouselInterval** field. For the best results, it is recommended to select a 30sec transition time.
 - Note that users can always skip between elements, and for accessibility reasons, the carousel transitions can always be stopped by the end user.

heroUnit Collapse

Enable the hero banner to select between the hero options and show a large component at the top of the page.

HeroType

Player Carousel

Select 'Player Carousel' to show a hero unit at the top of the page. This hero banner can show live events per their scheduling time, and as a fallback, will show a video playlists.

liveCategory

Select Category

Select the category, from which the live sessions will show. Leave empty to not show live media on the banner.

vodPlaylist Collapse

Select the playlist, from which the sessions will show.

type

Most Recent - All published

Select content for the lists

carouselInterval

Select the interval (in seconds) between transitions. It is recommended to select a number higher than 5sec.

Example of the Hero:

Text & Counter

This hero will show static texts and selected background at the top of the page with the option to add a time counter.

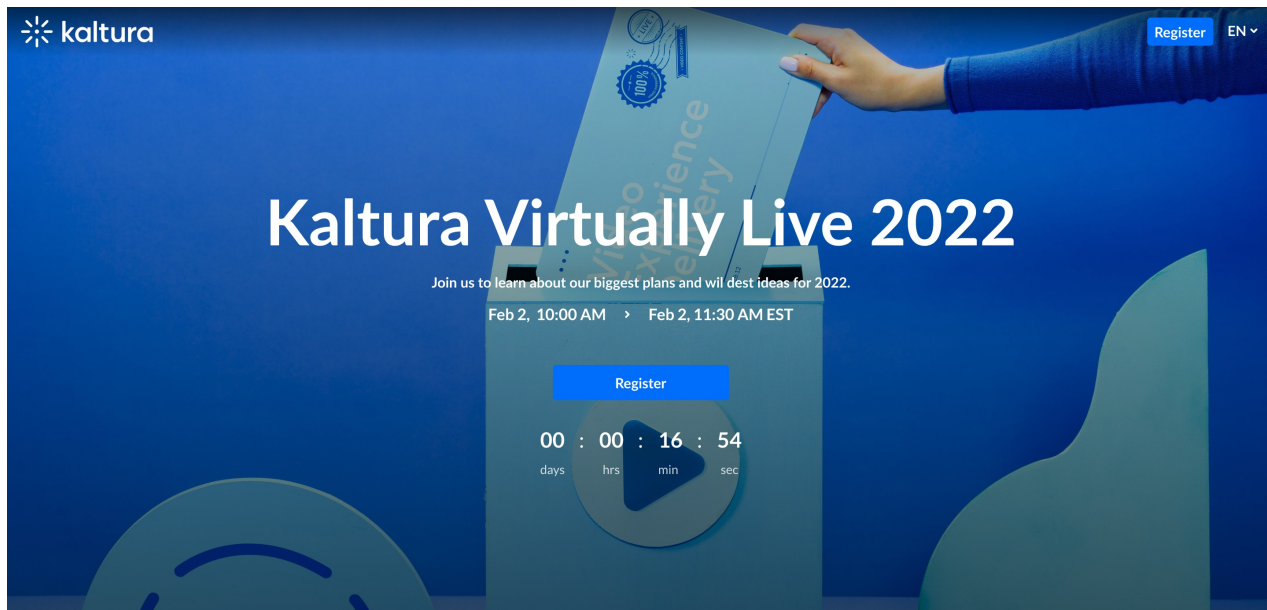

Note, that all elements on this hero unit are optional, and can be hidden by leaving the fields empty.

1. Enter the **Title** and **Description** to show at the top of the unit.
2. Fill in a **Start and End Date** (fill up both or none) to show a "from...to" element on the screen below the description.
 - a. Acceptable date format:
 - a. Unix Timestamp - Example: 1580518923 (look for 'unix timestamp converter' in any browser)

- b. String format under the UTC time zone (Example: 2020-02-01T01:02:03)
3. Add a **Call to Action button/s** (a CTA is a button that will take the user to a selected URL).
 - a. You can add 1 or 2 buttons, that will show up as a Primary and Secondary.
4. Add a **Time Counter** to your hero unit, counting down to a specific time and date.
 - a. The counter will disappear once reaches the deadline.
 - b. Acceptable date format are similar to the Start and End Date
5. Upload a **Background atmospheric** image for the hero.
 - a. Recommended a 1920x1080 resolution, with no text to prevent clashing with the written text on the hero.

HeroType	<input type="text" value="Text & Counter"/>	Select the 'Text & Counter' unit to show texts with background at the top of the page.
Title	<input type="text"/>	Enter the hero unit's header title.
Description	<input type="text"/>	Enter the hero unit's description.
DateStart	<input type="text"/>	Insert a start date to display below the description. Must also fill DateEnd to show the date on the page. Format: Unix Timestamp (Example: 1580518923) or exact date and time in string format under the UTC time zone (Example: 2020-02-01T01:02:03).
DateEnd	<input type="text"/>	Insert an end date to display below the description. Must also fill DateStart to show the date on the page. Format: Unix Timestamp (Example: 1580518923) or exact date and time in string format under the UTC time zone (Example: 2020-02-01T01:02:03).
PrimaryCallToActionText	<input type="text"/>	Enter the hero unit's Primary call to action button's text.
PrimaryCallToActionLink	<input type="text"/>	Enter the hero unit's Primary call to action button's link URL.
SecondaryCallToActionText	<input type="text"/>	Enter the hero unit's Secondary call to action button's text.
SecondaryCallToActionLink	<input type="text"/>	Enter the hero unit's Secondary call to action button's link URL.
CounterDate	<input type="text"/>	Add a counter to your hero unit, counting down to a specific time and date. The counter will disappear once reaches the deadline. Insert a future date in Unix Timestamp (Example: 1580518923) or exact date and time in string format under the UTC time zone (Example: 2020-02-01T01:02:03). Leave empty to hide the counter.
BackgroundImage	<input type="text"/> <input type="button" value="Upload Image"/> <input type="button" value="Remove"/>	Upload a background atmospheric image for the hero. The image will be cut according to the content of the hero. Leave empty to use a default background. Note: For optimal result please upload an image with 1920x1080 resolution.

Example of the Hero:

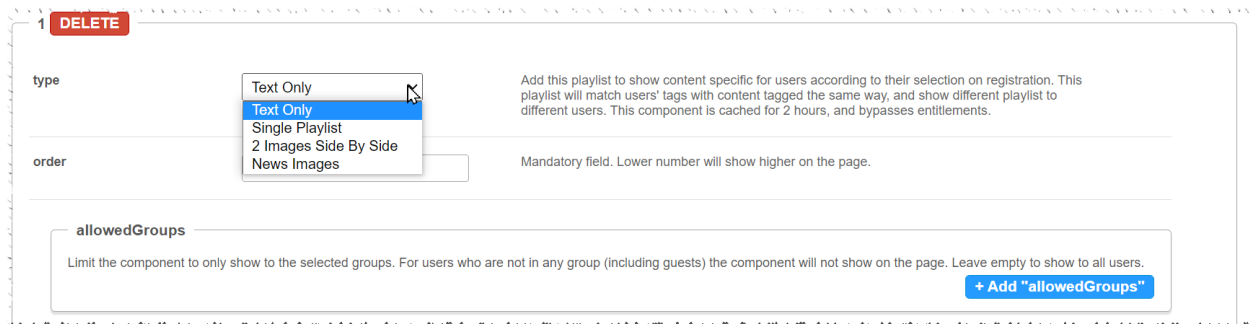

3. Components

Once you clicked the "Add Component" button, a new component will be created.

General components settings

All components have a few shared fields:

1. **Type** - A way to select what type of component to use.
2. **Order** of the component
 - a. Fill up a number larger than 0; Components will show on the page where lower numbers will show up at the top.
 - b. This is a Mandatory field.
 - c. Suggest to use high numbers for the order and not consecutive, this will allow for simpler change requests in the future (e.g. use order 10,20,30, and not order 1,2,3 - so in case you want to add a new component between the first and the second component, you can just add it in order=15)
3. **Allowed Groups**
 - a. This feature allows you to limit the visibility of each component to a selected set of users in a group/s.

1 **DELETE**

type

- Text Only
- Text Only
- Single Playlist
- 2 Images Side By Side
- News Images

order

Mandatory field. Lower number will show higher on the page.

allowedGroups

Limit the component to only show to the selected groups. For users who are not in any group (including guests) the component will not show on the page. Leave empty to show to all users.

+ Add "allowedGroups"

Add this playlist to show content specific for users according to their selection on registration. This playlist will match users' tags with content tagged the same way, and show different playlist to different users. This component is cached for 2 hours, and bypasses entitlements.

Note that the page is not limited to 1 component type per page. You may add many components of a single type of the page, however, note that adding too many component to the page will cause it to load slower (for example, adding 100 playlist to the page will slow it down, and is not a good UX anyway)

List of Components

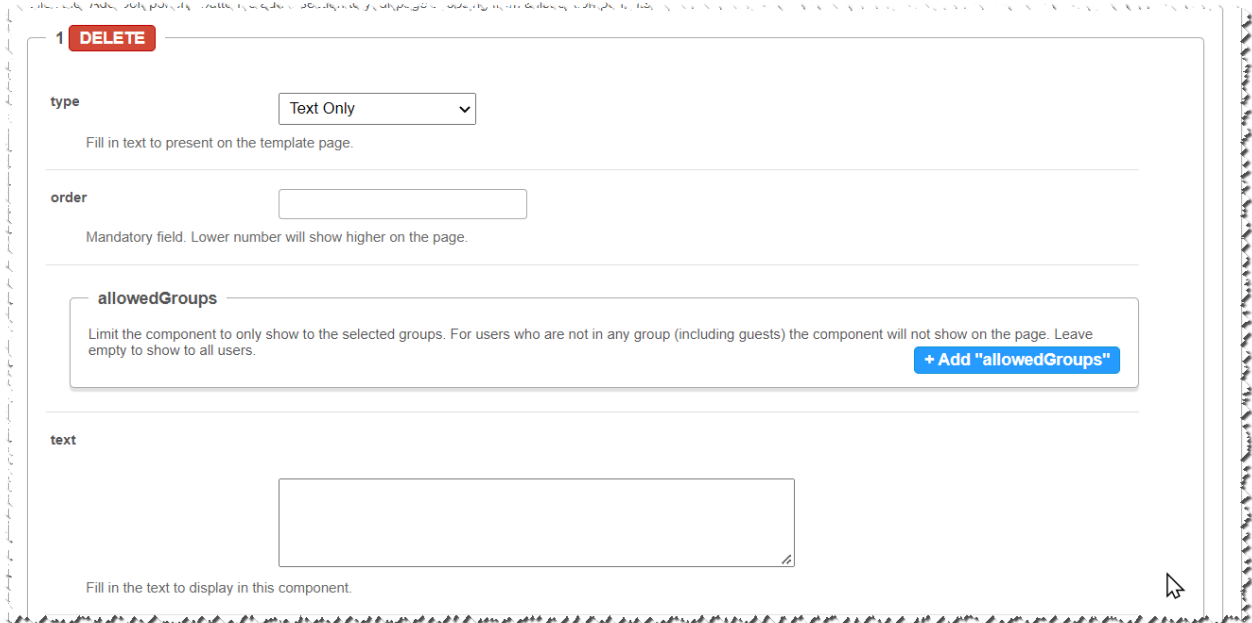

1. Text Only
2. Single Playlist
3. Two images side by side
4. News Images

1. Text Only

This Component is a simple text div.

- Text is centered to the middle of the div.
- Text color and background of the component can be set per component.
- Line breaks and other capabilities can be achieved using html tags (e.g. `
`)

Settings example:

1 DELETE

type Text Only

Fill in text to present on the template page.

order

Mandatory field. Lower number will show higher on the page.

allowedGroups

Limit the component to only show to the selected groups. For users who are not in any group (including guests) the component will not show on the page. Leave empty to show to all users.

[+ Add "allowedGroups"](#)

text

Fill in the text to display in this component.

2. Single Playlist

This Component will show a list of media in the form of a carousel.

• Title/s

- Select a title to show at the top left of the component using the **headerText** field.
- The "See All" at the top right is automatically set and will take the users to the playlist page, however the text can be changed to something else (such as "visit the playlist page") using the **headerLinkText** field.

• Content

- Select the content of the playlist from the **playlist** section. Note that the available playlists types include a custom playlist and a channel playlist.

• Visibility

- Important: The **listsforceShowContent** will allow you to override entitlements for the presented playlist, thus showing the thumbnails and titles of the playlist's content in the carousel to any user with access to the page and component, however, the content will not be clickable.

The "See All" link will also not be relevant, and a will be removed or redirected to a link of your selection using the **headerLinkAction** field (such as "Login to watch" with link to `{site_url}/user/login`).

This features main use case is for external pages use cases, where the site guests (unauthenticated users) will be able to see a sneak peek into the content.

• UI and UX

- **Thumbnails Number** - There are 3 ways to present this horizontal carousel -

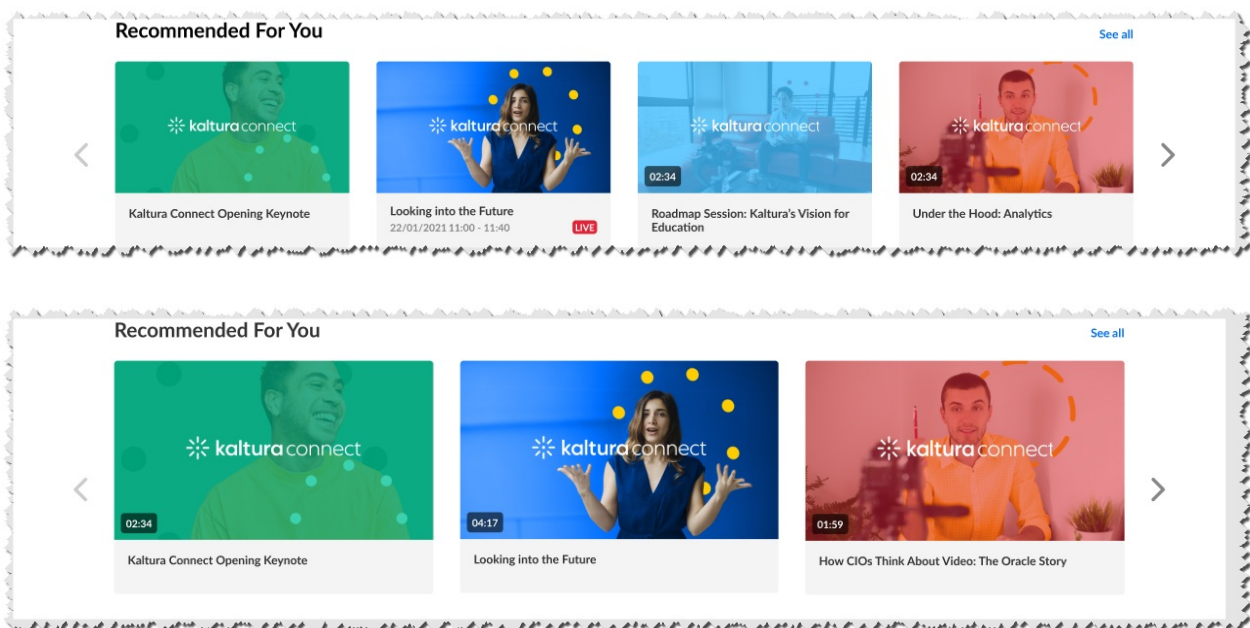

with 2,3, or 4 thumbnails. Select which one using the **itemsPerPage** field.

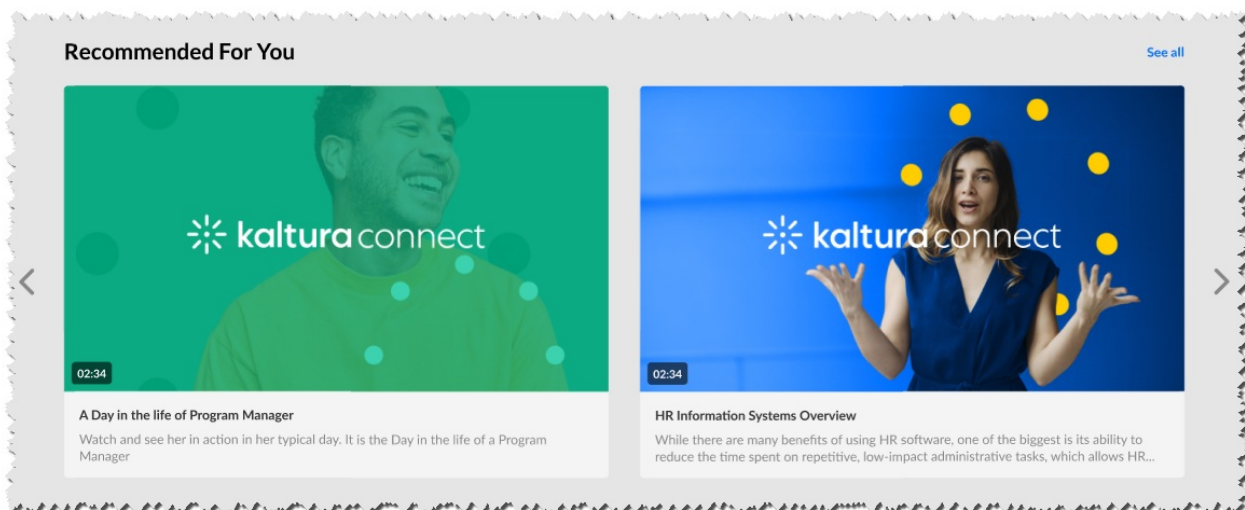

- **Time Shift** - Set a time in minutes where the the media in the list will shift one item to the left periodically. This is a great feature in larger playlist, to showcase all media in your playlist, allowing media items not in the top of the playlist to show first after a period of time.

Settings example:

headerText	<input type="text" value="Continue Watching"/>	Select the text for the component header (simple text).
headerLinkText	<input type="text"/>	Select the text for the component header link (simple text). Leave empty to use the default text.
playlist Collapse		
Select the playlist to show on the component.		
type	<input type="text" value="Continue Watching - Individu"/>	Select content for the lists
forceShowContent	<input type="text" value="No"/>	Select 'Yes' to force the playlist to show all the content in it, overriding entitlements and displaying the media metadata (thumbnails, title, and more) to all users. The component will become unclickable to prevent users to reaching access denied pages, however, you have the option to choose a different link for the component's items.
itemsPerPage	<input type="text" value="2"/>	Select how many thumbnails are viewable on page load.
timeShift	<input type="text"/>	The playlist will shift playlist's thumbnails one item to the left periodically. Enter duration in minutes, leave empty to disable.

Example Of Playlists:

3. Two images side by side

This Component will present 2 images side by side.

- Choose the left and right **image assets** from 3 options - Entry ID, Upload, or direct URL to the image.
 - For best results aspect ratio of the image should be 16:9.
- Set the **Call to action** (clickable URL) details on each image (optional) and how it should open (new browser tab or same)
- Not to forget - **Alt Text** for accessibility.

Single (left) image settings example:

leftImage
Collapse

What is the left image to show in this component. The aspect ratio of the image should be 16:9.

imageEntryId	<input type="text"/>	The option to load image from an entry thumbnail - specify the entry ID.
imageUrl	<input type="text"/>	The option to load image from URL - specify the URL of the image. The URL will be displayed if the imageEntryId field (above) is blank.
imageUpload	<input type="text"/> <input type="button" value="Upload Image"/> <input type="button" value="Remove"/>	An uploaded image will be displayed if the imageEntryId and imageUrl fields (above) are blank.
callToActionUrl	<input type="text"/>	Add a link to navigate the users to. The link will open in a new tab. If left empty, the image will not be clickable.
analyticsString	<input type="text"/>	Add a string to send in analytics events.
altText	<input type="text"/>	Add an alt text string.
openInTab	<input type="button" value="New Tab"/> <input type="button" value="Current Tab"/>	Select how the link will be opened, in a new browser tab, or in the current one.

Example of component UI:

4. News Images

This Component will show a list images with texts in the form of a carousel. Each elements on the carousel will open a to an article like modal box, showing the content of the image entry.

- **Content**

- Enter a playlist ID for the content.
 - Suggest to use media of type image entries for this playlist of size 760x920 (png or jpg).
 - The Title, Thumbnail, Date, and Article text content of each news item is taken from the entry's Title, Thumbnail, Update Date, and Description respectively.

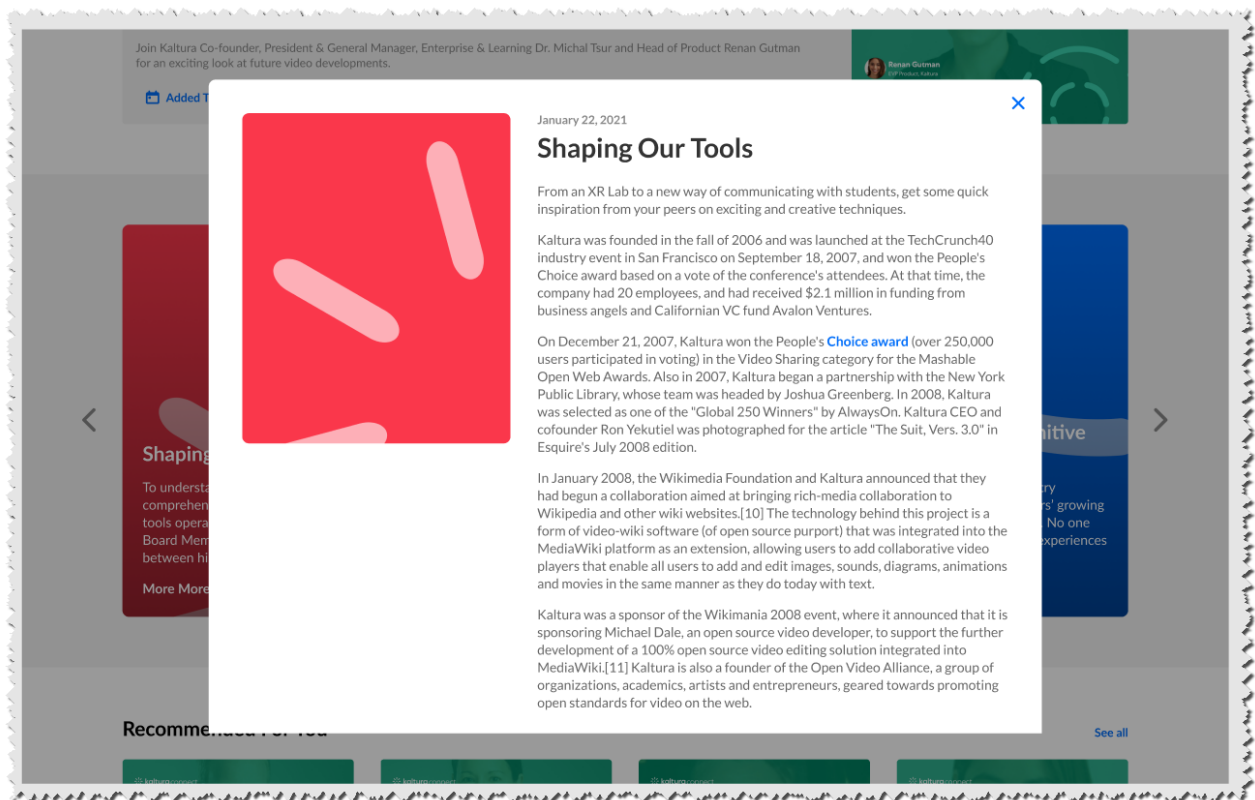

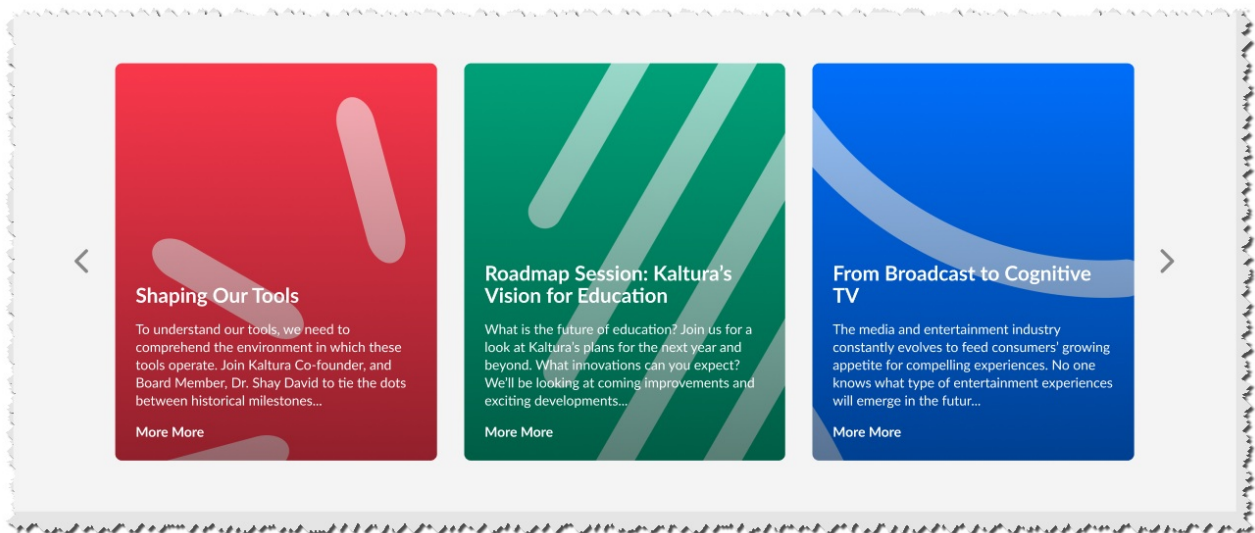

- **UI**

- change the BG color using the ***modalBoxMaskColor*** field.

Settings example:

modalBoxMaskColor	<input type="text"/>	Select the modal box mask color. Leave the field empty to use the default color.
playlistid	<input type="text"/>	What is the Playlist ID with content to show in this component.

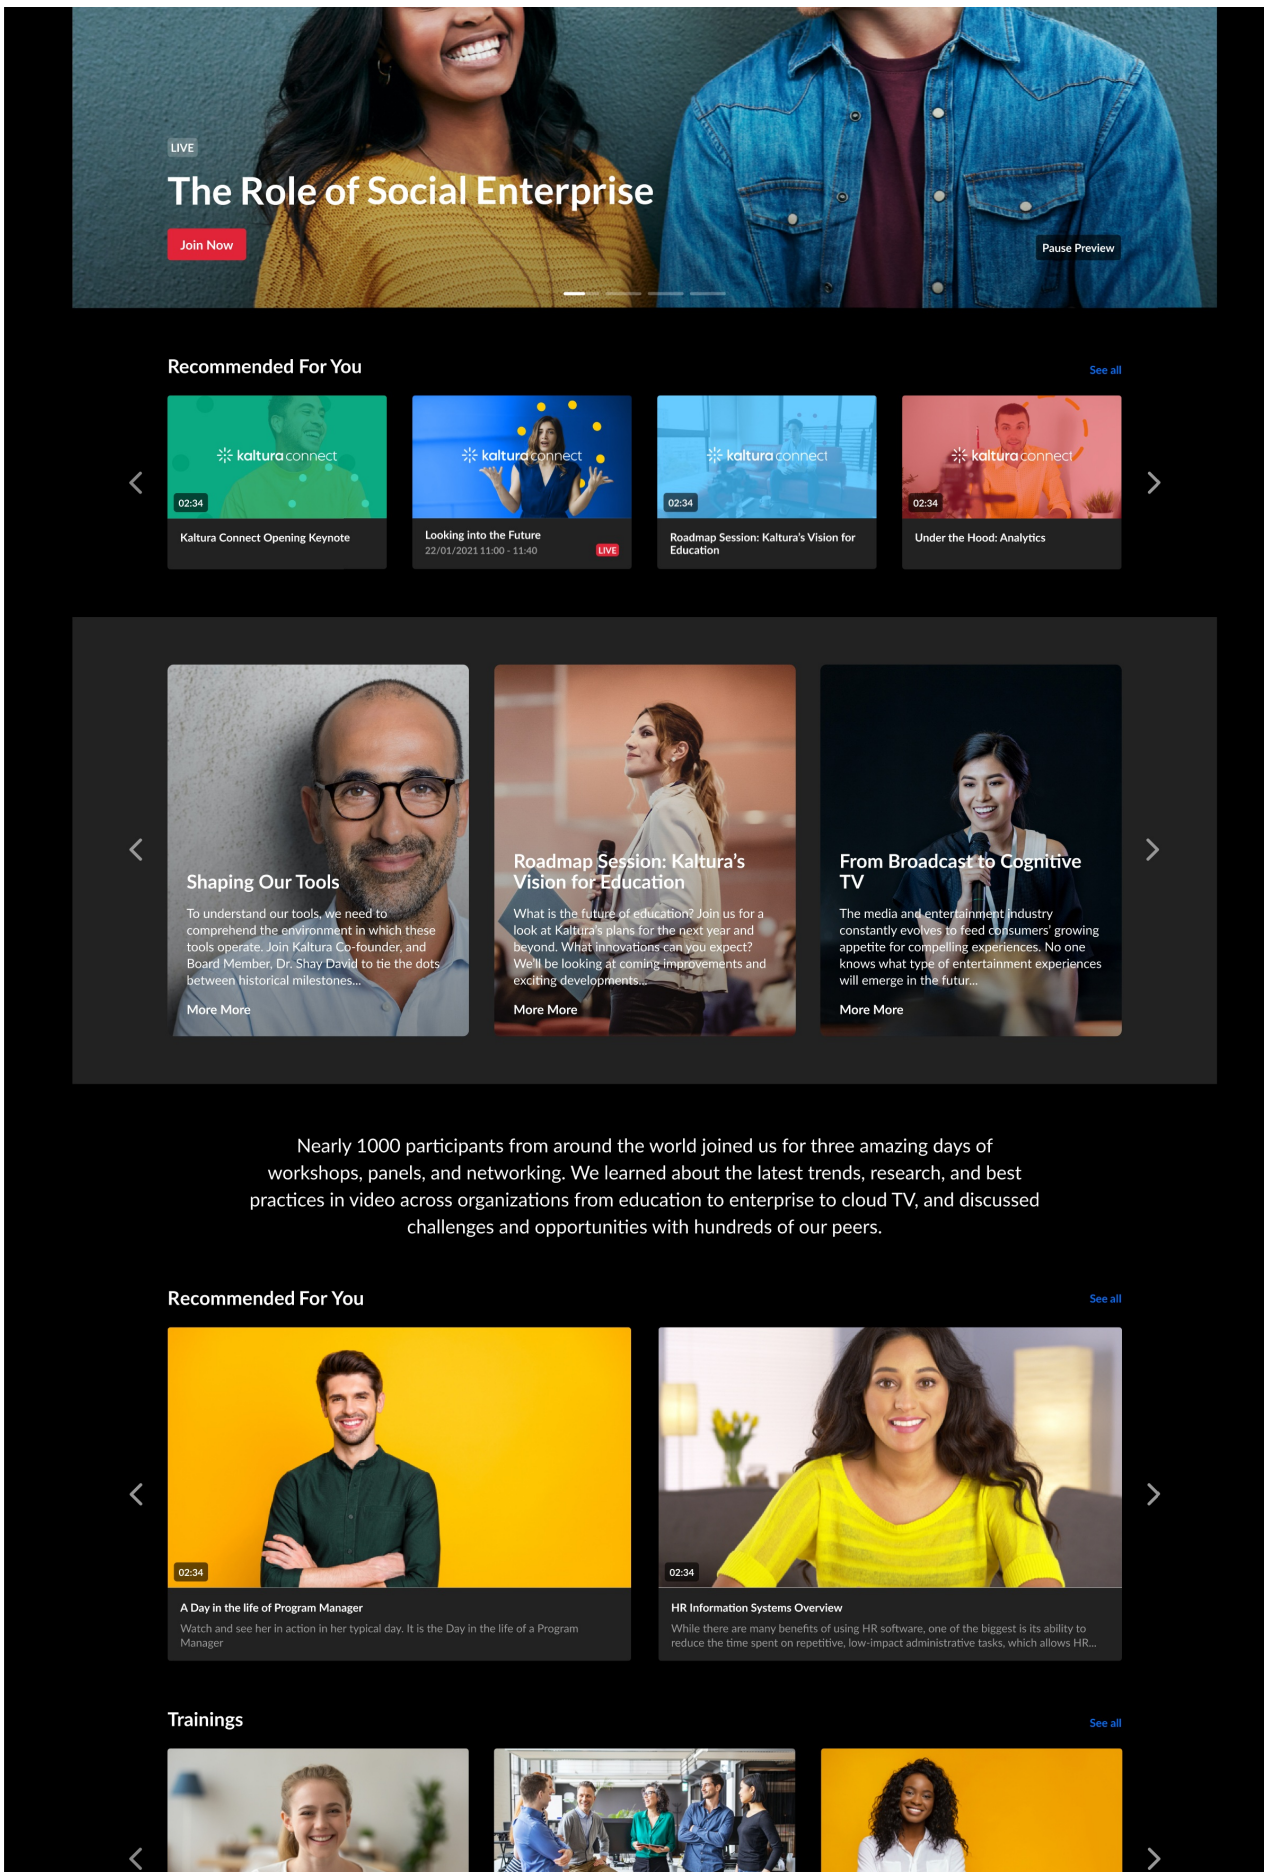

Example of component UI:

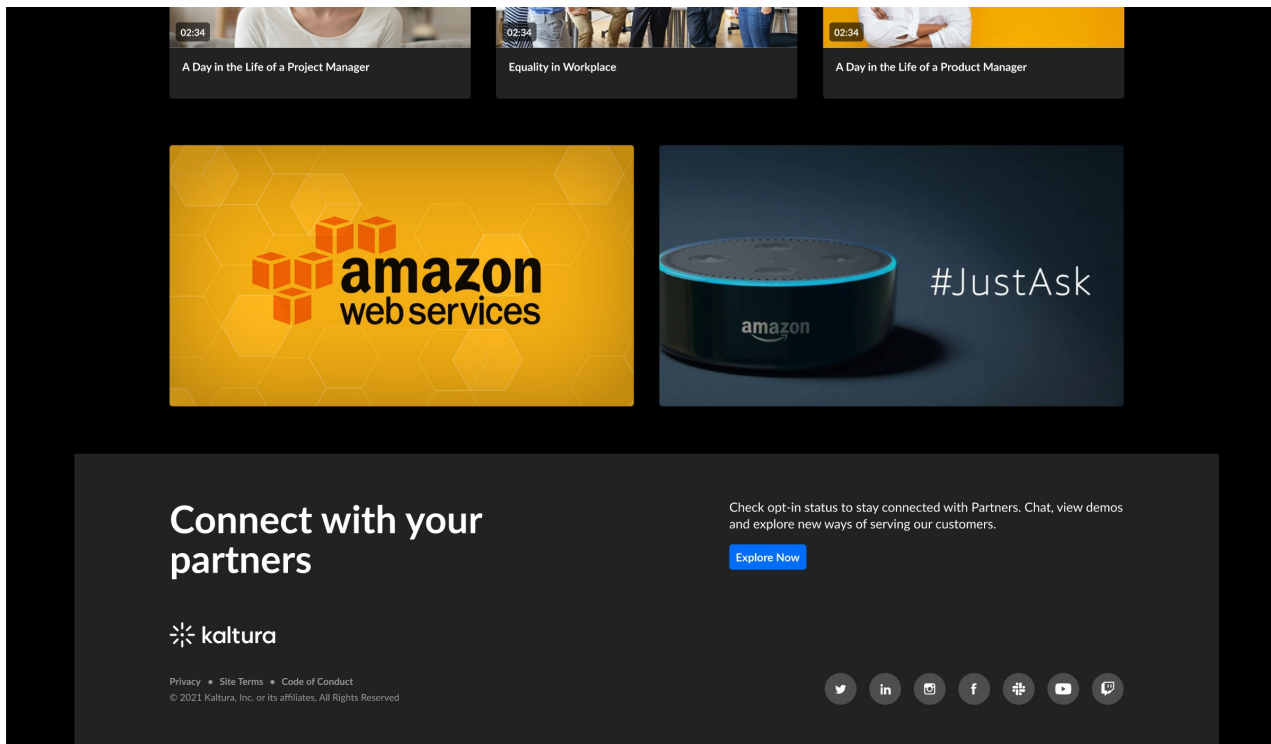

Page Example

Below you will see a full page with example components in a dark theme environment.

Theming

 This article is designated for administrators.

About

The Theming module is used to customize the look and feel of KMS and provides a customized set of pages for your application. This feature and module is currently available for KMS only.

You may create multiple themes for your site, preview them, and decide which theme to apply to your site.

 The Theming module is currently in a limited features release mode. Some features in this module are not available as of date of publishing.

Related Modules

Enabling the Theming module is a prerequisite for the following modules:

1. [TemplatePages](#)
2. [CustomPages](#)
3. [AddNew](#)
4. [Login](#)

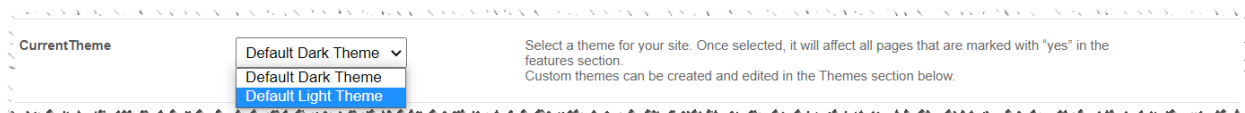

5. [Footer](#)
6. [HelpPage](#)
7. [ListPage](#)
8. [PersonalProfile](#)
9. ChannelThemeingUI - upcoming
10. ChannelCollections - upcoming
11. UploadMedia - upcoming

Working with themes

Enable and choose a Theme

To get started, enable the module using the *enable* field.

There are 2 default theme available for use - Dark and Light. Meaning, all the theming pages that are set to 'Yes' in the *features* section, will be affected by the theme selected.

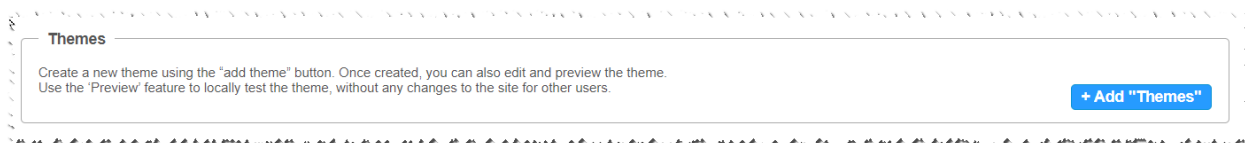

The screenshot shows a dropdown menu for 'CurrentTheme'. The menu is open, showing three options: 'Default Dark Theme' (selected), 'Default Dark Theme', and 'Default Light Theme'. To the right of the dropdown, there is a text box that reads: 'Select a theme for your site. Once selected, it will affect all pages that are marked with "yes" in the features section. Custom themes can be created and edited in the Themes section below.'

To create your own custom theme, use the *Themes* section.

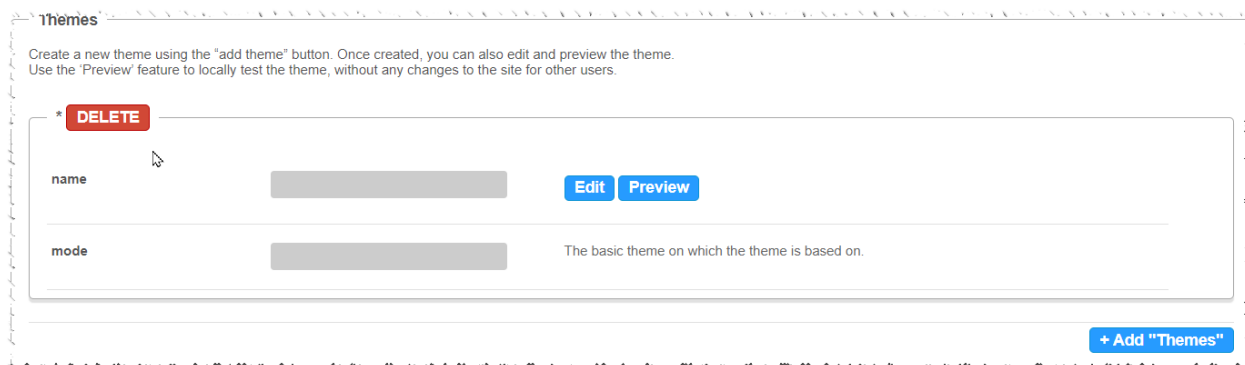

Create a Theme

To create your own theme, navigate to the *Themes* section, and click the "**Add Themes**" button.

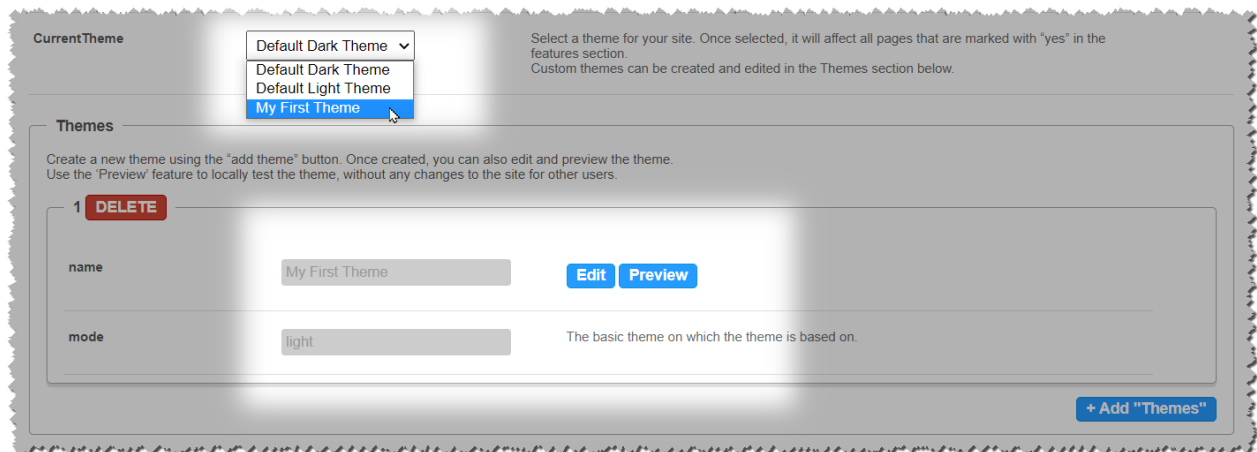

The screenshot shows the 'Themes' section. It contains a text box with instructions: 'Create a new theme using the "add theme" button. Once created, you can also edit and preview the theme. Use the "Preview" feature to locally test the theme, without any changes to the site for other users.' To the right of the text box is a blue button labeled '+ Add "Themes" '.

Click the "**Edit**" Button, and the Theme Studio will appear.

The screenshot shows the 'Theme Studio' interface. It has a header with a red button labeled '* DELETE'. Below the header, there are two input fields: 'name' and 'mode'. To the right of the 'name' field are two blue buttons: 'Edit' and 'Preview'. To the right of the 'mode' field is a text box that reads: 'The basic theme on which the theme is based on.' At the bottom right of the interface is a blue button labeled '+ Add "Themes" '.

Create, manage, and set your theme from the Theme Studio, and once done, you can set it as your site's default theme in the *CurrentTheme* dropdown.

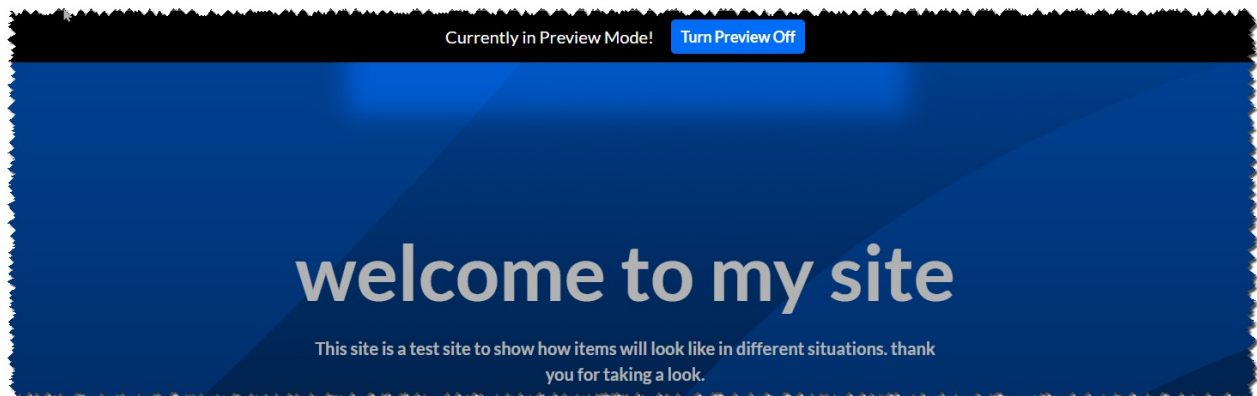

Preview your Theme

Click the "**Preview**" button to test your theme without changing the site's UI for all users.

Once clicked on the "**Preview**" button, you will be redirected to the site, and be presented with a preview banner below the navbar, indicating that you are in preview mode. This is a local view preview only (based on a temp cookie in your browser), and will not affect any other users.

To exit the preview mode, click the "**Turn Preview Off**" button in the preview banner.

Additional Information

Custom CSS

To add Custom CSS for themeing based features and pages, use the *themingAdditional* field under the *cssupload* module.

Features Section

 The *Features* section is an advance settings section, and should only be used by a Kaltura representative. Note, that when preview is enabled, it will display the site and all themeing pages with the previewed theme, regardless of the settings in the *features* section.

Make sure that the *header* field under the *features* section is set to yes. Keeping it set to No will result in different headers in different pages on the site.

Thumbnails

Field	Description
enabled	Enable the Thumbnails module.
extensionWhitelist	Define allowed extensions, example: jpg, png, jpeg, gif (one item per extension)

Twitter

Important Note:

Twitter requires that every domain is approved by them.

The Twitter approval process includes testing the experience across various platforms, as well as re-validating it periodically.

More information and how this can be done can be found [here](#).

The Twitter module enables metadata tags such that the thumbnail, entry name, and other metadata tags can be posted in the Tweet. Without this module enabled, only the KMS link will be posted because Twitter can't pick-up the metadata.

The player id (tPlayerId) set in the module is for the player used in th Tweet. Using this player, the video can be embedded in the Tweet and played from there.

For information on how to setup the player for viewing Twitter media in MediaSpace, please see [Setting up Twitter share for MediaSpace for Admins](#).

Field	Description
enabled	Enable the Twitter module.
tPlayerId	What is the player ID (uiConf ID) of the player that plays videos on Twitter? This should be a V2 play.
siteUserName	@username of website, to be used as value for twitter:site meta tag
useHighestQuality	Use the best quality flavor that can be played in Facebook.
siteDescription	Enter the text to send on the 'twitter:description' property for the shared link for non-player pages.
shareImageUrl	Enter a link to an image you would like to use when users share content for non media pages (such as home page). Leave empty to use the site logo.

Userreports

Channel/Course Managers can measure and analyse the user engagement and contribution to their channels/courses. These contextual analytics allow channel/course managers to answer important questions such as: What are the most popular videos in the channel/course? Who are the members that watch the most videos and what is their drop off rate? Who are the members that contribute the most media to the channel/course?

The [mediaAnalytics](#) field should be enabled to display the Analytics page. The Analytics page is accessed from the 'Actions' drop down of the entry page. The Analytics report is identical to the analytics for the entry in the KMC.

Field	Description
enabled	Enable the Userreports module.
mediaAnalytics	Enable media analytics for media owner
num_days	Default number of days
page_size	Default page size
playerIdv2	Fill in a version 2 player ID to be used in the analytics pages. Leave empty to use default.

Watchlater

This module controls the ability to add videos to a Watch Later playlist. Users can set up a queue of clips as a playlist, that will be ready to watch whenever they have time.

See [Create and Add Media to a Playlist](#).

Field	Description
enabled	Enable the Watchlater Module.
profileTabTitle	Reset to Default.

OneDrive

The OneDrive module provides the ability for users to ingest content from their personal OneDrive folder by adding an 'Add from OneDrive' button in the Add New menu.

Field	Description
enabled	Enable the OneDrive module.
allowedRoles	Select the minimum role to be able to import files from OneDrive.
applicationId	Enter the application (client) ID from the application page in Microsoft Azure.

[template("cat-subscribe")]
