

360 & VR

 This article is designated for all users.

Overview

The Kaltura Player supports 360° video and VR on desktop and mobile devices with any motion - mouse, touch, device motion, and keyboard keys.

Immersive videos, also known as 360 videos, 360-degree videos, or spherical videos, are video recordings of a real-world panorama, where the view in every direction is recorded at the same time, shot using an omnidirectional camera or a collection of cameras. Kaltura supports navigation using the mouse, keyboard (using WASD keys), and on mobile devices..

Use cases for 360 / VR are varied and include university lectures, conferences, sports events, and more.

Setup

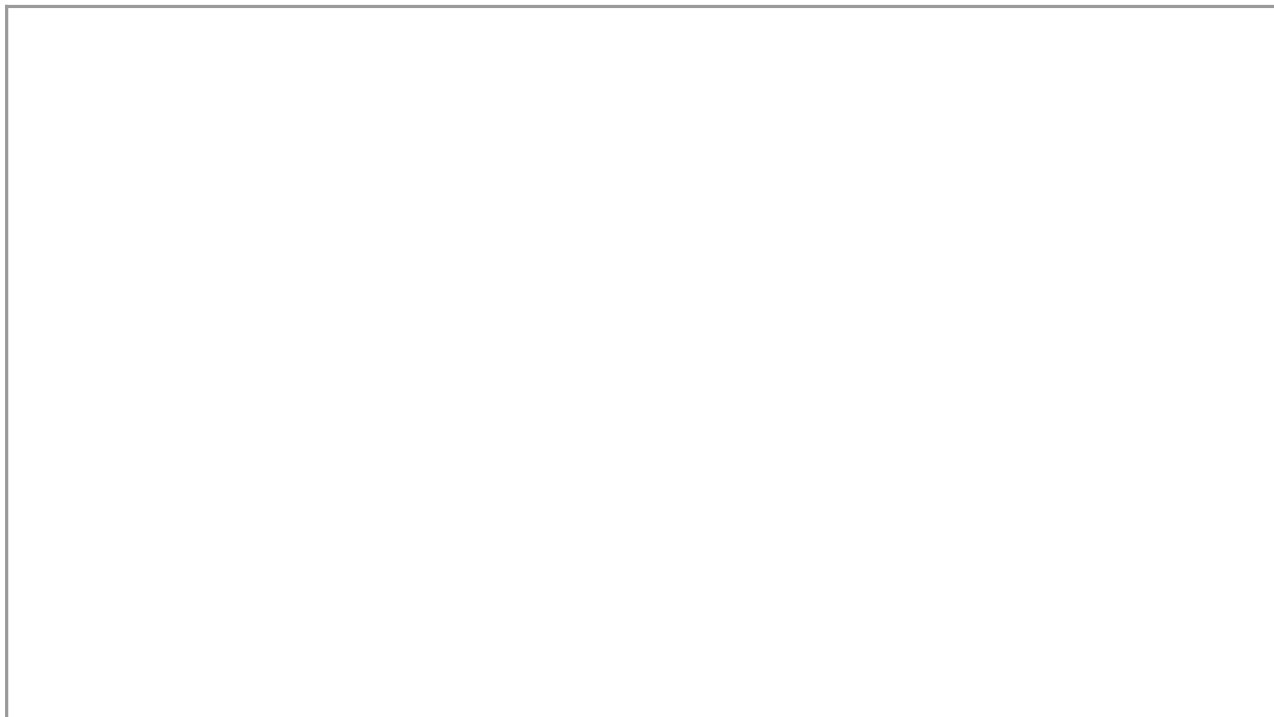

To learn how to set the **360 & VR Plugin** on the player, see [The Kaltura Player Studio Admin Guide - Top & Bottom Bar Settings](#).
