

Media Localization

28 This article is designated for all users.

Media owners can add metadata (such as Name, Description, and Tags) in different languages for their media via the Languages tab of the Media Edit page.

Admin setup

Enable the Multi-Language Instance setting under the Application module to use this feature. For more information see Localization - How to Change Your Kaltura Application Language?

 \sum The accounts shown herein have the theming module enabled.

Add a language

- 1. Access the Edit Media Page.
- 2. Click on the Languages tab. The Add language to your media details screen displays.

3. Click **Enable languages**. The Set your default language screen displays.

Set your default language

Select the language in which you wrote the media details.

▲ Notice the Set default language check box is deactivated for the first language you enter because the first language entered is always used as the default. When adding subsequent languages, this check box is active, allowing you to adjust the default used.

5. Click **Save**. The language is now set for the metadata.
