

Adminaccess module

 This article is designated for administrators.

The **Adminaccess module** allows administrators to have more control over which type of KMC user can access the Video Portal or KAF Configuration Management pages. Once enabled, only KMC users with Publisher / Administrator role can access the Configuration Management pages, however, additional configurations are available if you'd like to allow other KMC users to gain access.

1. Go to your KMS or KAF Configuration Management page, and navigate to the **Adminaccess** module. Your link should look like this:

`https://{your_KMS_URL}/admin/config/tab/adminaccess.`

The Adminaccess window displays.

Adminaccess

Module Info

info

This module will allow the application administrator decide who can access the application admin pages using the "admin" URL. Once enabled, the access to the application admin pages will be limited to KMC users with Publisher Administrator role only. Additional configurations in this module will allow other KMC users to also be able to access.

enabled

Yes ▾

Once enabled, only KMC users with Publisher Administrators roles will be able to access the application's admin pages, unless configured otherwise below.

2. **Enabled** - Set to 'Yes' to restrict access to KMC users with 'Publisher / Administrator' role only.

enabled

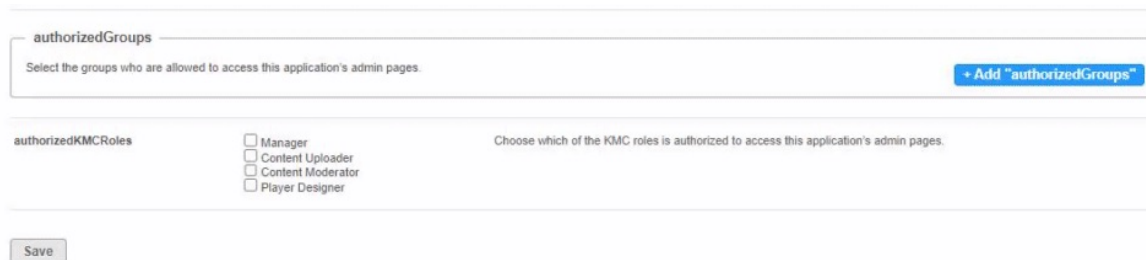

Yes ▾
