

How to replace media in the KMC?

You can replace media content when an entry is ready for publishing or when a media processing error occurred. The entry itself, with its current metadata, entry ID, and analytics information, remains unchanged.

All Transcoding Flavors are replaced as one unit to ensure that inconsistency errors do not occur between old and new Transcoding Flavors at any given time.

You can review the Transcoding Flavors of the new media file in a temporary entry that is available for this purpose only. After you approve media replacement, all of the entry's existing Transcoding Flavors are deleted and will be replaced by the new ones.

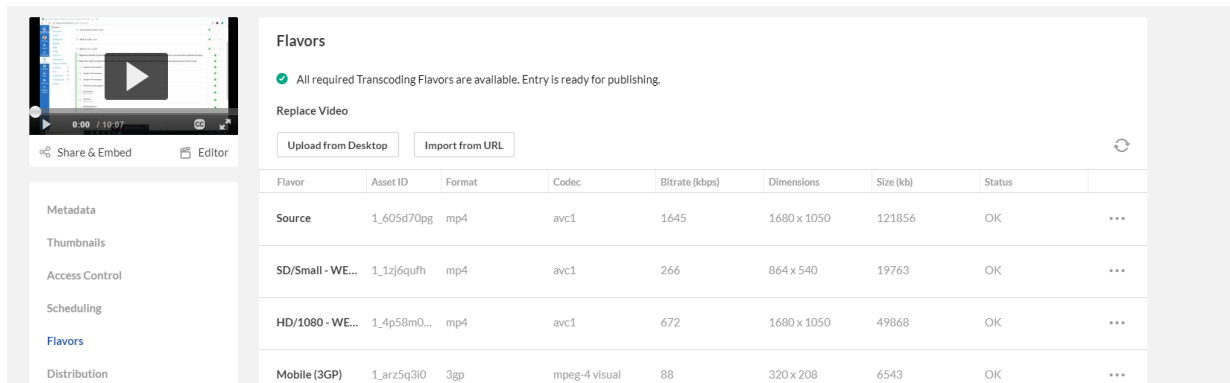

To replace media

1. Select the Content tab and click on an entry.
2. Select the Flavors tab.
3. Click on an entry.
4. Select the replacement method.

See [Upload From Desktop](#), [Import from URL](#)

After you trigger the action, a link to review the new Transcoding Flavors generated for the new media becomes available on the Flavors tab.

5. Click on Processing – Click here to review to see the transcoding process. You can then review the new Transcoding Flavors, and approve or cancel our selection..
6. Click Approve Replacement. All current flavors are replaced when you approve the replacement or click Cancel Replacement to cancel your actions.

Flavor	Asset ID	Format	Codec	Bitrate (kbps)	Dimensions	Size (kb)	Status	
Source	1_605d70pg	mp4	avc1	1645	1680 x 1050	121856	OK	...
SD/Small - WE...	1_1zj6qufh	mp4	avc1	266	864 x 540	19763	OK	...
HD/1080 - WE...	1_4p58m0...	mp4	avc1	672	1680 x 1050	49868	OK	...
Mobile (3GP)	1_arz5q3l0	3gp	mpeg-4 visual	88	320 x 208	6543	OK	...

NOTE: When you trim an entry, you trigger a similar process that replaces existing flavors with the trimmed version.
