

How to create an access profile

Last Modified on 03/20/2020 7:15 pm IST

☰ To create an access control profile

1. Select the Settings tab and then select the Access Control tab.
The Access Control Profiles window is displayed.
2. Click Add Profile.
The New Access Control Profile window is displayed.

3. Enter an informative Name and Description for the profile.
4. Configure the Authorized Domains. See [Restricting Domains](#).
5. Configure the Authorized Countries. See [Restrict Content to Specific Countries for Viewing](#)
6. Configure the Authorized IP Addresses. See [Restricting Views by IP Address](#).
7. Configure the Advanced Security. See [Restricting Views with a Server Side Secret](#)
8. Click Create New.

☰ To edit an access control profile

1. Select the Settings tab and then select the Access Control tab. The Access Control Profiles window is displayed.
2. Select the access profile you want to edit. The Edit Access Control Profile window is displayed.
3. Modify the profile according to the sections described above.
