How to switch off HTML5 controls for iPad

Last Modified on 10/07/2019 1:48 pm IDT

The iPad has two modes of usage for HTML5, HTML controls or native player. There are tradeoffs to both options:

Advantages of HTML controls:

- On screen overlays (like ad overlays)
- Control over the playhead scrubber (no ad skip)
- Custom branded player and 'experience' (watermarks, control bar logo, share option etc.)

Advantages of Native controls:

- Smooth transition to true fullscreen (no "new browser window" or address bar)
- Consistent with iPhone experience (native player)
- Analytics and flavor selection work the same for both modes

To switch **off** HTML5 controls for iPad:

```
mw.setConfig('EmbedPlayer.EnableIpadHTMLControls', false );
```

Please visit our HTML5 video FAQ on the html5video.org wiki for the latest HTML5 documentation.
