

How do I dynamically embed an HTML5 video player

Last Modified on 04/18/2025 6:14 pm IDT

If you want to embed the player dynamically, the library supports rewriting swfObject or flashembed. In addition, the library supports a native mechanism to embed the iframe:

```
kalturaframeEmbed( 'kaltura-video', {  
  'wid' : '_243342',  
  'uiconf_id' : '5349042',  
  'entry_id' : '0_ntovmku5'  
});
```

Please visit our [html5 video faq on the html5video.org wiki](#) for the latest HTML5 documentation.
