

Categories CSV - Usage and Schema Description

Last Modified on 02/24/2024 6:40 pm IST

This article is designated for administrators.

About

The Categories CSV is handy for creating, updating, or deleting numerous categories at once. It's useful for tasks like:

- Setting up multiple categories for Video Portal (MediaSpace) galleries and channels.
- Regularly syncing Kaltura categories with an external structure, like Video Portal group channels with organization-managed groups.
- Automatically syncing Kaltura categories with an external CMS taxonomy.

For an efficient, on-going CSV based sync process, only new categories and categories that require updating or deletion should be included within the CSV.

Content entitlement related attributes can be populated via the CSV only in accounts that are set to support entitlements and for categories under a category tree branch that is set to have entitlement settings.

General guidelines

- Lines that begin with a # character will not be processed.
- The first line for processing (fields' definition line) should start with an * sign and should include the field names to be populated via the CSV, according to the defined schema of each CSV format. Mandatory fields must be present. The field order may be set as needed.
- Each line for processing within the CSV should include a comma separated list of values ordered by the field ordering set in the fields' definition line.
- Each line for processing within the CSV will apply an action on a single Kaltura object. For example: each line in the categories CSV will apply the action to a single category.
- The CSV may be submitted from the KMC (through the Upload menu) or via a script, by utilizing Kaltura's API.
- Prior to processing the CSV file, its format is validated. When a mandatory field is missing, the bulk job will fail and processing will not start.
- Bulk job tracking as well as downloading bulk job related files (the original CSV and log files) are done through the KMC using the **Bulk Upload Log** feature under the

Upload Control page.

- Email notifications on the completion of bulk upload processing including completion status and a direct link to the log file, can be configured by Kaltura per request.
- There is no limitation on the supported number of lines within each CSV. The overall processing time of each CSV file is affected by the number of lines included in it.
- The following special characters can be populated within text fields via the CSV file:

See special exceptions within each schema description.

Schema description

Parameter name	Mandatory/ Optional	Description	Default	Турє
action	Optional	for the action to apply on a specific category. CSV lines with different	1= Add	KalturaBulk
		actions can be combined into a single CSV file. Only fields that are relevant to the CSV action will be used.		
		The supported action types and their numeric values are:		
		1=Add - to add a category		
		2=Update - to update an existing category		
		3=Delete - to delete an existing category		
		6=Add or Update - to		

Parameter name	Mandatory Optional Mandatory in add actions	when the scription category or referenceld are already available in Kaltura. The name of the category. When the category name includes	Default	Type Text field. I characters
	detions	the > character it will automatically be replaced with _ (underscore character).		
relativePath	Optional	The category-tree path in which the category is located or should be created. Each category level within the path should be separated by the '> 'character. Note: The provided path must exist prior to processing the CSV line, or created in a higher CSV line.		Text field. I
categoryld	Optional	The Kaltura internal and unique identifier of the category. The categoryld field is used in the CSV for identifying a category that requires updating or needs to be deleted. In an 'update' or a 'delete' action, either the		Integer
		categoryld or the referenceld field must be provided for identifying the category to which the action should apply.		

Parameter name	Mandatory/ Optional	In 'add Pastointing categoryld field will be ignored.	Default	Туре
referenceId	Optional	A possible identifier of the category based on an identifier from an external system that can relate the category to an external entity it represents or related to. In an 'update' or a 'delete' action, either the categoryld or the referenceld field must be provided for identifying the category to which the action should apply.		Text field. I characters
		In 'add' actions the referenceld will be populated into the new category.		
		Note: The uniqueness of the referenceld field is not verified nor managed in Kaltura. It is recommended to use logic that maintains this uniqueness for being able to reference bulk actions and API calls to a specific category.		
		In case multiple categories with the same referenceld exist in the account, any update/delete action will be committed only to a single category.		

Parameter name	Mandatory,	Description	Default	Туре
tags	Opptional	The tags to be added to		Text field.
		the category. Multiple		
		tags can be separated by		
		commas, while the entire		
		field should be wrapped		
		with double quotation		
		marks (e.g. "tag1, tag2).		
		When the CSV is created		
		in a simple text editor or		
		by a script, the wrapping		
		quotation marks should		
		be added explicitly. When		
		CSV is created with a		
		spread sheet editor (e.g.		
		Excel) this wrapping is		
		automatically generated		
		when saving to a CSV		
		format with no need for		
		manual editing.		
		Tag values cannot include		
		commas.		
description	Optional	A description of the		Text field. I
		category and its		
		applicative/administrative		
		purpose.		
		When the CSV is created		
		in a simple text editor or		
		by a script – adding		
		wrapping quotation		
		marks is recommended		
		for cases in which the		
		description includes		
		commas		
Custom Data		Custom data fields that		
		are set to extend the		
		Kaltura Category object		

		can be populated into a		
Parameter name	Mandatory	/catego Desgription g the	Default	Турє
r arameter name	_	fields in the following	Derdare	. ypc
	Optional	formats:		
		TOTTIACS.		
		metadata::the-schema-		
		system-name::the-		
		schema-field-name		
		With this format multiple		
		custom data schemas		
		and fields can be		
		populated via the CSV.		
		Custom data schema and		
		fields system names are		
		available in the custom		
		data setting page in the		
		KMC.		
		Values of custom data		
		fields that have multiple		
		values should be		
		separated with the		
		following delimiter: ,		
		Note: When updating		
		custom data fields to an		
		existing category, a new		
		metadata XML is		
		automatically created.		
		For preventing overriding		
		existing values, all		
		custom data fields that		
		are set for the user		
		should be provided in the		
		CSV as part of the update		
		action.		
		action.		
Entitlements setting	gs			
privacy	Optional	The numeric value of the		KalturaPriv
		Content Privacy option to	Restriction	
		set for the category as		

Parameter name	Mandatory/ Optional	part of its entitlements Description settings.	Default	Туре
		This option is enabled only in accounts that are configured to support end-user entitlements to content and for categories that were set to have entitlement settings. The supported action types and their numeric values are: 1= No Restriction 2 = Requires Authentication 3= Private		
appearInList	Optional	The numeric value of the Category Listing option to set for the category as part of its entitlements settings. The setting of this option is enabled only in accounts that were configured to support Content Entitlements and in categories that have entitlement settings. The supported action types and their numeric values are: 1= No Restriction 3= Private		KalturaApp

co Parlautiete pliname	_	The nu Designipation of the		Kaltur a Gypt
	Optional	ContributionPolicy option	Restriction	
		(who can add content to		
		the category) to set for		
		the category as part of its		
		entitlements settings.		
		The setting of this option		
		is enabled only in		
		accounts that were		
		configured to support		
		Content Entitlements and		
		in categories that have		
		entitlement settings.		
		The supported action		
		types and their numeric		
		values are:		
		1= No Restriction		
		1 - No Nestriction		
		2= Private		
inheritanceType	Optional	The numeric value of user permissions inheritance option (Inherit End-User Specific Permissions from Parent Category) to set for the category as part of its entitlements settings.		KalturaInhe
		The setting of this option		
		is enabled only in		
		accounts that were		
		configured to support		
		Content Entitlements and		
		in categories that have		
		entitlement settings.		
		The supported action		
		The supported action		
		types and their numeric values are:		
		values ale.		

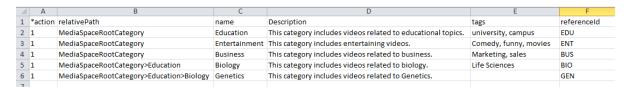

Parameter name	Mandatory/ Optional	1= Yes. inherit specific Description end-user permissions from parent category	Default	Турє
		3= No.		
owner	Optional	The userId of the category's owner.		Text Field. Minimum le Maximum l Only the fo are support.
defaultPermissionLevel	Optional	The numeric value of the default permission Level the end-users should be granted for the specific category (unless other permission level was specified explicitly via CSV or API). The supported values are: 0=Manager 1=Moderator 2=Contributor 3=Member	3=Member	KalturaCate
moderation	Optional	Indicates whether content should be moderated in the application before it is added to the category.	0=moderation is not required	Boolean

Examples

Bulk creation of categories - basic metadata only

Updating existing categories with a few entitlement settings

This example uses the referenceld as the category identifier.
