

# What are specific end-user permissions in the KMC and KMS

## Specific End-User Permissions

When any one of the Category Entitlement Options is set to Private, the respective access level is based on specific end-user permissions. User permissions to a category and content associated with it are set through 4 permission levels: Member, Contributor, Moderator, and Manager. The basic access permissions listed below are enforced by the Kaltura server. In MediaSpace the permission levels are used to control the availability of the relevant UI controls and user flows, for example, Channel Settings, Channel’s moderation panel, Publish Module and others.

Permissions Permission Levels	View Content and Category	Add Remove Content to Category	Approve Content added to the category	Edit Category’s settings, privacy options and user permissions	Remove Category
Member	X				
Contributor	X	X			
Moderator	X	X	X		
Manager	X	X	X	X	X

The settings of end-user permissions can be made from the KMC, in Bulk Process via a CSV

formatted schema, or via Kaltura APIs.

**In MediaSpace:** Channel Managers are able to set their channel's groups members and may assign different permission levels to members of their group.

**Note:** The content owner has always full access and editing permissions to their content. The content owner is also able to remove content from any category, regardless of the category's settings.

**Tip:** the category end-user permissions may also be used by applications when the category is not set as private – for granting category specific applicative permissions to specific users.

**In MediaSpace:** users that is not set to with an Admin Application Role can still be granted with permission to publish content in specific galleries. In this case the category's contribution policy is set to **No Restriction** while ability to publish content in the respective gallery is granted by the application to all MediaSpace **Admin** users, but also to a few specific users that are set as contributors in the category.
