Getting Started with the Kaltura Application Framework (KAF)

Last Modified on 06/25/2020 6:43 pm IDT

The Kaltura Application Framework (KAF) is designed with application developers in mind, to allow expedited, streamlined development of video-centric applications. Learn more about this exciting new platform and how you can begin using it.

- See Customization Made Easier With The Kaltura Application Framework (aka KAF) for a walkthrough on how customization is made easier using KAF.
- To learn more about KAF see Understanding the Kaltura Application Framework
- The document Kaltura Video App for Canvas Setup Guide provides an example from a live integration on how to manage and configure a KAF instance using the Kaltura Video App for Canvas.
- Proof of Concept Presentation: Get Your Product To Market Faster With Kaltura Application Framework, provides a deep dive technical walk through of how KAF can be used to create embedded views into an existing application. It uses Drupal as an example for a system that does not have out of the box product integration and shows how KAF can be used to embed views into the system.
