

# 'Plays' instead of 'Views' in KMS and KAF Based Applications

The number of views presented on the player and on the entry page has been changed to the number of plays.

- **views** - entry was loaded
- **plays** - viewer actually pressed the 'play' button or video actually started to play

The number of plays should always be smaller than the number of views because users may load the entry page without actually playing the video.

In 'Autoplay' mode, the number of plays should be identical to the number of views.
