

What time zones are used for scheduling events in the Kaltura Platform

Last Modified on 05/06/2026 8:41 pm IDT

Scheduling the Time Zone Through API or Drop Folders

- The API always uses the Unix timestamp.

Unix time is indicated in UTC.

- Bulk upload uses GMT with the format: YYYY-MM-DDThh:mm:ss (T is just the letter T)
- The Rich Media CMS translates the timestamps to the time zone of the client's computer (for example: GMT-5)
