

Is it possible to stream 3D content (Side By Side format) and provide a transcoding profile to use with the Kaltura platform?

Last Modified on 08/19/2019 9:11 pm EDT

Kaltura can host your transcoded files. You can simply upload each transcoded rendition (either via the UI or the API) and then play it back in the Kaltura Player.

A sample of extending the player to support special experiences, such as spherical video can be found [here](#) .
