

Configuration Management: Channel Modules KMS Management Console/KAF Admin

Configuration Management: Channel Modules

[collapsed title="Channelcategories"]

Channelcategories

This module allows users to associate channels to categories and replaces the ChannelTopics module. See [Associating Channels to Categories](#) for more information.

Field	Description
enabled	Enable the Channelcategories module.
channelCategoriesProfileId	The profile id of the Channel Categories metadata profile.

[/collapsed]

[collapsed title="Channelembd"]

Channelembd

This module allows you to decide on the default behavior of the embed when an entry is accessed in the context of a channel.

This module enhances the [Secure Embed](#) feature in the embed module, and is a prerequisite for turning this module on.

Use this module to allow channel managers to block embed-grabbing from their channel (useful when managing copy-righted content whose consumption should be confined to the portal). For more information read [here](#).

You can also the limit embed-grabbing to published content only.

Field	Description
enabled	Enable the Channelembded Module.
enableEmbedOnByDefault	What should be the default "Enable Embed" in the Channel settings page, affecting whether users can grab an embed of an entry in the context of a channel?
embedRoles	Select one or more roles that can grab an embed if enabled.
allowManagerOverride	Can a channel manager override the default behavior of Enable Embed?

[/collapsed]

[collapsed title="Channelmembers"]

Channelmembers

Field	Description
enabled	Enable the Channelmembers module.
preventAddingUsers	When set to true, if the channel is mapped to a group name, the channel manager will not be able to add/remove users manually. Only alternative option would be to change the role of the users that were added through the synchronization process.

Field	Description
preventChangingRole	(default false). Used to support use cases where the offline synchronization process controls both the users and their role in the channel and prevent the channel manager from overriding those settings via KMS.
addMemberGuidelines	Add member guidelines text when creating/adding member to channel. Use [b]foo[/b] - for bold, [i]foo[/i] - for italic. The entire list is here
showOfflineSyncOption	Allow the channel manager to set a group name for offline sync.
detachOnlyFromGroups	Group Users - Allow detaching users only from associated groups.
displayUserGroupAs	Group Users - How should User-Groups show in members list.
findGroupUserSuggestions	When enabled, the user suggestions in “add member to channel” will also find groups.
enableGroupActionMenu	When enabled, the remove and edit group option in the channel will be enabled.

[/collapsed]

[collapsed title="Channelmoderation - KMS"]

Channelmoderation

You can define whether new channels that are created should be moderated by default. In addition, MediaSpace administrators can configure if the moderation option can be disabled by channel managers, to comply with use cases where moderation must be enforced. In the *Channelmoderation* module, you can set the *moderationDefaultValue* to define if the moderation option should be enabled or not by default when channels are created. The *forceModeration*

parameter, in the same module, removes the checkbox from the channel creation form, allowing the MediaSpace administrator to control the moderation configuration centrally.

Field	Description
enabled	Enable the Channelmoderation module.
forceModeration	Force moderation on every new channel creation,
moderationDefaultValue	Default value when moderation checkbox is enabled
requestConfirmationPopup	Request confirmation pop-up

[/collapsed]

[collapsed title="Channelsubscription - KMS"]

Channelsubscription

See the section on [Setting Email Notifications and Channel Subscriptions](#) for more information.

Field	Description
enabled	Enable the Channelsubscription module.
channelSubscriptionProfileId	Custom metadata profile id for storing whether channel subscription is enabled for channel

[/collapsed]

[collapsed title="Channeltheme - KMS"]

Channeltheme

Field	Description
enabled	Enable the Channeltheme option.
carouselInterval	Interval (in miliseconds) between carousel transitions.
playerSet	Create sets of players. Channels managers can select a player set to use in all the Channels media. A player set contains a list of players, one for each type of media. Media with no player will use the default media player. Click Add Player Set.
playerSetName	Enter a player set name and click Add Player.
entryType	Select the type of entry.
playerId	Enter the PlayerID.

[/collapsed]

[collapsed title="Channeltopics - KMS"]

Channeltopics

Each channel can be associated with a topic from a predefined list of topics. This module provides

the ability to provide a way of filtering channels by topics.

To setup the list of topics, create a custom metadata schema [in the KMC](#), and populate it with a custom field of type 'Text Select List' containing a list of all the topics.

Field	Description
enabled	Enable the Channeltopics module.
profileId	Choose the custom data schema of the Channel Topics metadata you created in the KMC. Click Save for the topicField values can be populated.
topicField	Choose the custom data System Name of the field containing the predefined topics.
topicsFilter	Select whether to show the topics filter in both the 'All Channels' Page and 'My Channels'; Only in the My Channels pages; or hide the filter from All Channels pages.
