

Using CSS to Customize Your MediaSpace

MediaSpace allows you to override the default style that is included in the application. The default style is defined in `bootstrap.css`. Since the default theme in MediaSpace is built on top of the [Twitter Bootstrap framework](#), you can provide a standard [Bootstrap CSS](#) and override the default style that MediaSpace provides out of the box.

This article describes how to “skin” MediaSpace and adjust it to your brand colors.

✔ We have added Static Classes support to facilitate CSS customization of the [theming-based pages](#). See reference in [KMS Version 5.114.4x November 13, 2023](#).

Uploading your Own Custom Style

You can create your own custom Bootstrap CSS and upload it via the MediaSpace Administration Area. You can write a CSS using your favorite CSS editing tool, or use one of the many dedicated Bootstrap tools that generate a standard Bootstrap CSS without the need to do any coding. Refer to the [Kaltura MediaSpace Styling Guide](#) for information on how you can create your own custom CSS file before you upload it to MediaSpace.

To upload a custom CSS file

1. On the Configuration Management panel of the Kaltura MediaSpace Administration Area, open the [Cssupload](#) tab.
2. Under *enabled*, select **Yes**.
3. Click **Save**. You will not be able to upload a file until the module is enabled.
4. Under the *bootstrap* section, click the *upload* link.

The screenshot shows a configuration panel for the 'bootstrap' section. At the top left, there is a 'bootstrap' label and a 'Collapse' button. Below this, there is a text prompt 'upload a replacement bootstrap file.' followed by a 'url' label and a greyed-out input field. Underneath the input field are two buttons: 'Upload CSS file' and 'Remove'. At the bottom of the section, there is another 'upload a replacement bootstrap file.' prompt.

5. Browse to your Bootstrap CSS file and click **Upload CSS file**.
6. The *additional* section, allows you to provide a separate CSS file for other CSS classes used in MediaSpace that are not part of the standard Bootstrap CSS file. If you want to override any of these classes, create a separate CSS file and upload it through the *upload* link in this section
7. Click **Save**.

8. Refresh your MediaSpace site to see the updated style.
