

Customizing the Look and Feel of Your MediaSpace

Last Modified on 09/10/2020 6:26 pm IDT

MediaSpace allows you to override the default style that is included in the application. The default style is defined in `bootstrap.css`. Since the default theme in MediaSpace is built on top of the [Twitter Bootstrap framework](#), you can provide a standard [Bootstrap CSS](#) and override the default style that MediaSpace provides out-of-the-box.

This article describes how to “skin” MediaSpace and adjust it to your own brand colors.

Uploading your Own Custom Style

You can create your own custom Bootstrap CSS and upload it via the MediaSpace Administration Area. You can write a CSS using your favorite CSS editing tool, or use one of the many dedicated Bootstrap tools that generate a standard Bootstrap CSS without the need to do any coding. Refer to the [Kaltura MediaSpace Styling Guide](#) for information on how you can create your own custom CSS file before you upload it to MediaSpace.

To upload a custom CSS file

1. On the Configuration Management panel of the Kaltura MediaSpace Administration Area, open the [Cssupload](#) tab.
2. Under *enabled*, select **Yes**.
3. Click **Save**. You will not be able to upload a file until the module is enabled.
4. Under the *bootstrap* section, click the *upload* link.

The screenshot shows a configuration panel for the 'bootstrap' section. At the top left, there is a 'bootstrap' label and a 'Collapse' button. Below this, there is a text input field with the placeholder text 'upload a replacement bootstrap file.' and the label 'url'. To the right of the input field is a greyed-out button labeled 'Upload CSS file'. To the right of that button is another greyed-out button labeled 'Remove'. At the bottom of the panel, there is another text input field with the placeholder text 'upload a replacement bootstrap file.'

5. Browse to your Bootstrap CSS file and click **Upload CSS file**.
6. The *additional* section, allows you to provide a separate CSS file for other CSS classes used in MediaSpace that are not part of the standard Bootstrap CSS file. If you want to override any of these classes, create a separate CSS file and upload it through the *upload* link in this section
7. Click **Save**.
8. Refresh your MediaSpace site to see the updated style.
