

Enhanced Settings for Channel and Category Embed

Expand/Collapse All

The [channelEmbed](#) and [categoryEmbed](#) modules allow the KMS admin to decide on the default behavior of the Embed tab when an entry is accessed in the context of a channel or category.

The modules:

- Allow channel/category managers to block embed-grabbing from their channel/category.
- Override the default role permissions set by the main Embed module, allowing finer grain control differentiated between categories and channels.

For the KMS Admin

Enable the [channelEmbed](#) and [categoryEmbed](#) modules are located in the [Modules/category](#) and [Modules/channel](#), respectively.

For the Channel/Category Manager

When enabled, a checkbox is added to the [category/channel](#) settings page.

In a channel:

- Options:
- Moderate content (Media will not appear in channel until approved by channel manager)
 - Enable comments in channel
 - Keep comments private to channel.
 - Enable subscription to channel
 - Enable embed grab

In a category:

Private – Only Category members can view and contribute content.

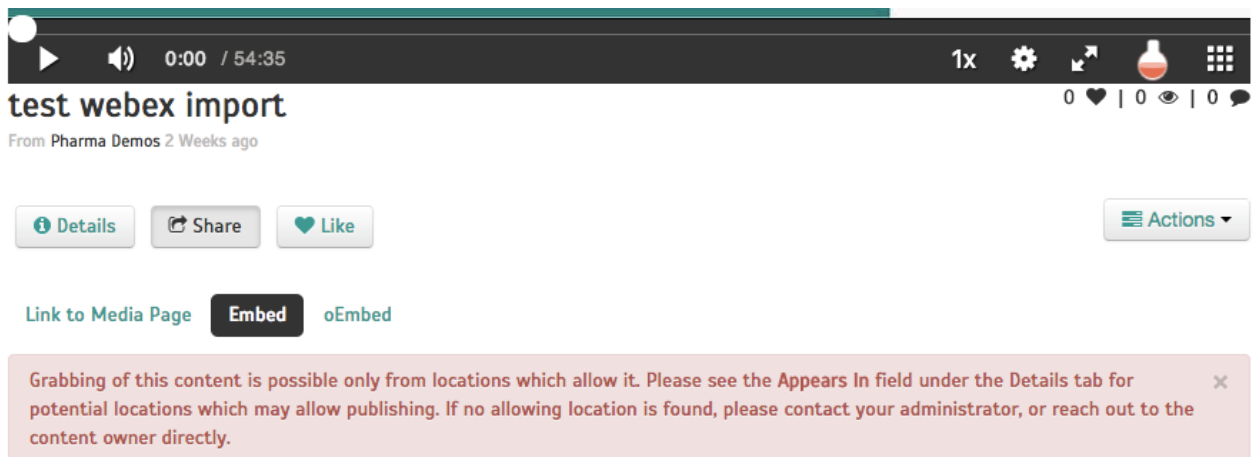

- Options:
- Moderate content (Media will not appear in category until approved by category manager)
 - Enable comments in category
 - Keep comments private to category.
 - Enable embed grab

When the allowManagerOverride field is set to 'No', the “Enable embed grab” checkbox is displayed with the default value, as set in the module’s configuration by the KMS admin, but will be disabled.

- Options:
- Moderate content (Media will not appear in category until approved by category manager)
 - Enable comments in category
 - Keep comments private to category.
 - Enable embed grab

End-users Trying to Grab an Embed

When an end-user attempts to grab an embed of an entry from a category/channel that prevents embed grabbing, the following message is displayed:

NOTE: Note:

- Both modules depend on the Embed module to be enabled. In case the Embed module is disabled, embeds will not be allowed regardless of these modules’ settings and the “Enable embed”

checkbox will not appear in the category/channel settings.

- Per the module's logic as described above, should the embedRoles in the Embed module be set differently than the one in the category/channel modules, the latter will take effect.
-
