

# What kind of embedded captions are supported by the Kaltura Player?

Last Modified on 11/13/2019 8:48 pm IST

The following embed caption configuration applies to TTML captions inside Live Streams.

Configuration panel for embedded captions:

- Use glow ⓘ
- Glow blur ⓘ: 4
- Glow color ⓘ: [Color selector]
- Default language key ⓘ: [Text input]
- Hide when empty ⓘ
- Show embedded captions ⓘ: Show captions embedded in the video file.

Kaltura supports the following formats for Live Captioning:

- CEA-608 captions embedded in live streams.
- Captions embedded as Action Message Format (AMF) **onTextData** in input streams.
- Captions embedded as AMF **onCaption** in input streams.

The "Show embedded captions" configuration works with third party streams since our Live platform currently does not support Live Captions.
