

Is the search tool the same for the KMS GO and KMS web applications?

Last Modified on 10/27/2020 2:17 pm IST

For KMS GO, a new way of searching for entries is available. Unlike the global search in KMS for the web, KMS GO allows you to simultaneously search in an entry's basic metadata (name, description, tags) and inside complex data belonging to an entry (custom data, comments, slides, captions, chapters) according to the filter the user sets when searching.
