Select recording inputs in Lecture Capture

Content updated: 08/20/2019

This article is designated for all users.

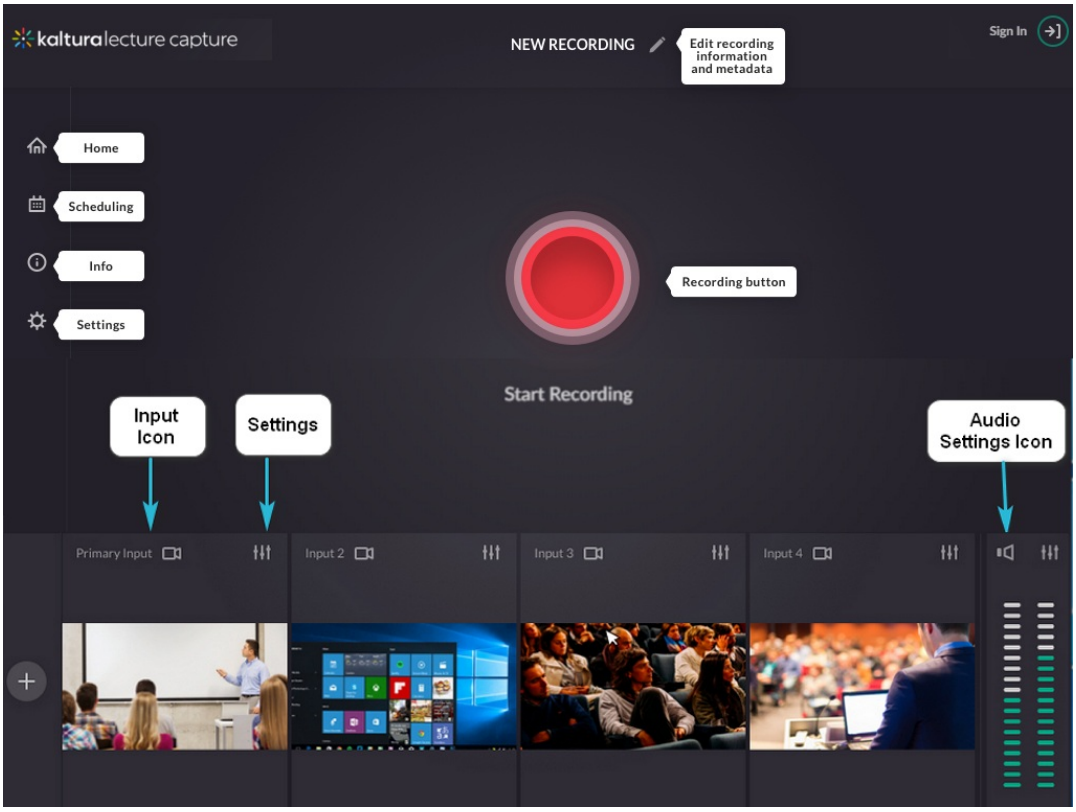

About

You can select and configure the camera, screen, and audio inputs to use for your Lecture Capture recordings. Lecture Capture supports up to four camera or screen inputs.

By default, inputs use the highest available quality, so you can start recording without changing the settings.

Select recording inputs

Lecture Capture uses a camera as the primary video input and the screen as the secondary video input by default. You can select different inputs, change their settings, or disable an input for a recording.

Your input settings are saved for future recordings.

For information about configuring individual inputs, see:

- Configure camera settings in Lecture Capture
- Configure screen settings in Lecture Capture
- Configure audio settings in Lecture Capture

Recording inputs during a live broadcast

Lecture Capture broadcasts only the primary input, even when multiple inputs are being recorded. If PowerPoint slides are available, the slides are broadcast alongside the primary input.
