

Custom/Core Modules/KMS/KAF

ModulesCustom/Core/KMS

[collapsed title="Kwebcast"]

Kwebcast

NOTE: Currently the Kwebcast Module uses live entries, therefore if this module is enabled the [Liveentry Module](#) must be disabled.

For more information, see the [Kaltura Webcasting Administrator's Guide](#).

Field	Description
enabled	Enable the Kwebcast module.
applicationName	Define the applicationName. This configuration value is passed to the webcast application. If left empty the default value is used. Configure this field to brand the application with a specific name. Leave empty for Kaltura branding.
applicationLogoUrl	Define the applicationLogoUrl. Provide the URL to a logo image which is passed to the webcast application. If left empty the default logo is used. The logo size should be 156x78 pixels. Add a URL to an image if you would like to brand the application with a company's logo. The logo will replace the Kaltura logo on the top left corner of the application. Leave empty for Kaltura default branding.
	Enable DVR for Webcast Events. Disable this field for Self-

Field	Description
dvrEnabled	serve Webcasting.
transcodingProfile	<p>This list of transcoding profiles is taken from the Kaltura Management Console and is based on the available transcoding profiles there. The transcoding profile is applied to all webcast events created after this field is set. You cannot change previous entries' transcoding profiles here. See the article Adaptive Bit Rate Settings for more information. Use passthrough if you are NOT using live transcoding (aka live +). Select a different option if you're looking to perform cloud transcoding.</p>
liveBroadcasterRole	<p>Limit Webcast Event creation to a certain user or user role. If a role is selected, any role with higher permissions than the role selected will be allowed to create Webcast Events.</p>
WinProducerAppUiConfID	<p>This value is automatically assigned by the system upon save. A specific instance of the application will be added to the PID. This is the ID of the UIConf for the Windows Kwebcast application.</p>
MacProducerAppUiConfID	<p>This value is automatically assigned by the system upon save. A specific instance of the application will be added to the PID. This is the ID of the UIConf for the Mac Kwebcast application</p>
SupportSelfServe	<p>Determine whether to allow self-serve scenario. This field is a beta feature. Contact your Kaltura representative to enable this feature for you.</p>
allowedSelfServedUsers	

Field	Description
	Select users who are allowed to launch self-serve Webcast Events.
PlayerUiconfld	This value is automatically assigned by the system upon save. This is the UIConf for the player used for Webcasting events. To create a customized player for webcasting events, you can create a new player in the studio and update the configuration here. Note that all webcasting plugins must be enabled on the player to ensure slide sync and Q&A availability.
BSEPlayerUIConfID	This value is automatically assigned by the system upon save. This is the ID of the UIConf for the BSE Kwebcast player. This field is only relevant for KAF administrators. See the article Using the Browse Search and Embed (BSE) Feature for more information. To create a customized player for webcasting events, you can create a new player in the studio and update the configuration here. Note that all webcasting plugins must be enabled on the player to ensure slide sync and Q&A availability. This player ID will be used in the KAF module for BSE.
EnableHomepagePreview	Enable auto-playing video previews inside the carousel on the Webcasts Homepage
EnableQnA	Enable or disable running moderated Q&A sessions during live webcasts. This option should be enabled to display the Moderator View when Webcasting Moderators are assigned.

EnablePolls	Enable polls during webcast events.
Field	Description
showInSearch	Select which fields should appear in the search.
autoStartEventOnBroadcast	Define whether the webcasting event should automatically start when the encoder starts broadcasting video, or to explicitly start the webcasting event after previewing the stream.
liveSchedulingEnabled	Enables webcasting scheduling and the webcasting calendar view. This allows webcasting administrator(s) to see/edit all partner events on a calendar, define resources and projected audience size. After enabled, you will need to assign specific users as webcast administrators. Note: Group collaboration (MediaCollaboration > allowGroupsCollaboration) should be enabled for this feature to work properly.
admins	Select specific users who are event admins. All added users will be able to see and edit all past and future events, including events not created by them.
exportResources	Download Resources List. Export the current list of resources (rooms,cameras,encoders,etc).
manageResources	Upload a resource definition file (.csv). See example format here .
SupportSelfServed	Whether to allow self-served scenario. Depends on autoStartEventOnBroadcast being disabled.

Field	Description
allowedRolesForSelfService	Who can create a Self Serve Webcast? if a role is selected, any role above it will also be able to create a Self Serve Webcast.
allowedSelfServedUsers	Select users who are allowed to launch self served. Webcast Events
defaultThumbnailUpload	Upload an image to replace the default thumbnail for webcast entries. Suggested image size is 1140×672 pixels.
SupportConferenceIntegration	Whether to allow the Video Conference Integration scenario. See the article Kaltura Video Conference Integration V1 for more information.
allowedRolesForIntegration	Who can launch video conference integrations from Webcast Events? if a role is selected, any role above it will also be able to launch video conference integrations from Webcast Events.
thumbnailRotator	Enable thumbnail image rotation on mouse over in Webcast homepage.

For additional information about Kaltura Webcasting, see the [Kaltura Webcasting Administrator's Guide](#) on the Knowledge Center.
