

# Kaltura Capture - Installing and Launching the Application

The Kaltura Capture Desktop Application needs to be downloaded and installed in order to starting using it.

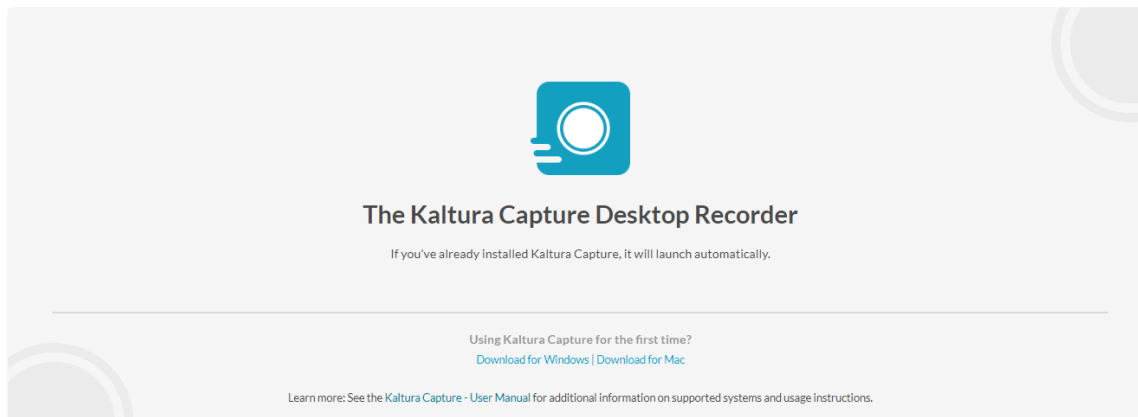

[collapsed title="Downloading and installing the application"]

1. On the KMS homepage or your KAF application homepage, select Kaltura Capture from the Add New drop down menu.

You will be redirected to a download page.

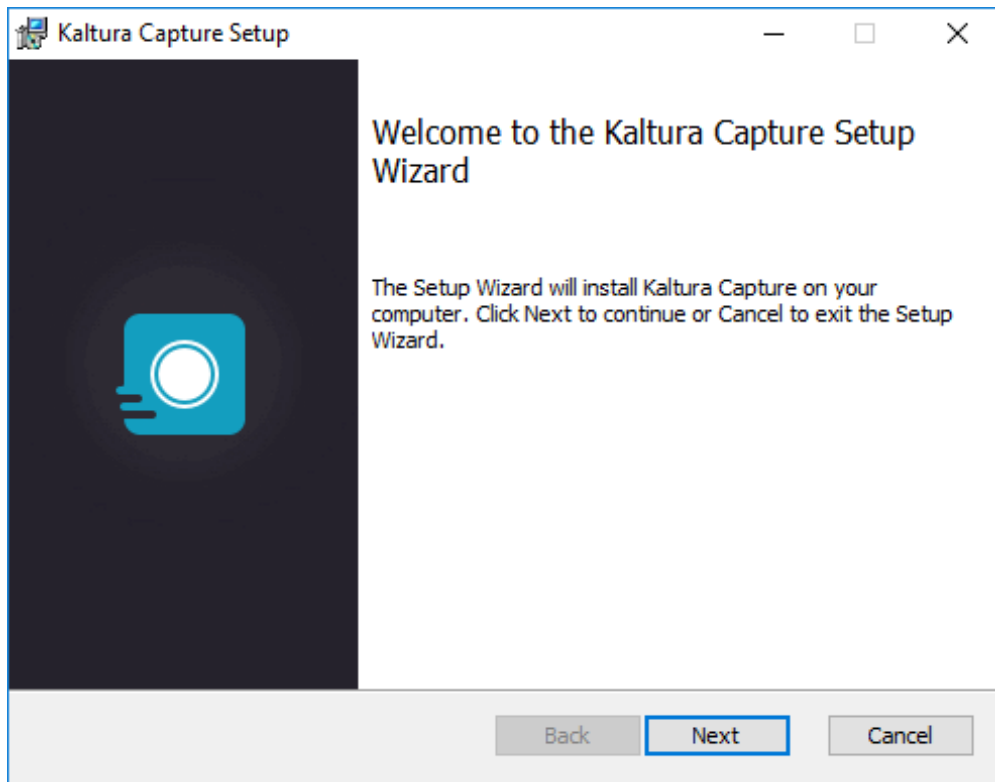

2. If you are installing the Kaltura Capture software for **Windows** continue here. Skip to [Step 3](#) for Mac Installation.

- a. Click **Download for Windows** to download the application.

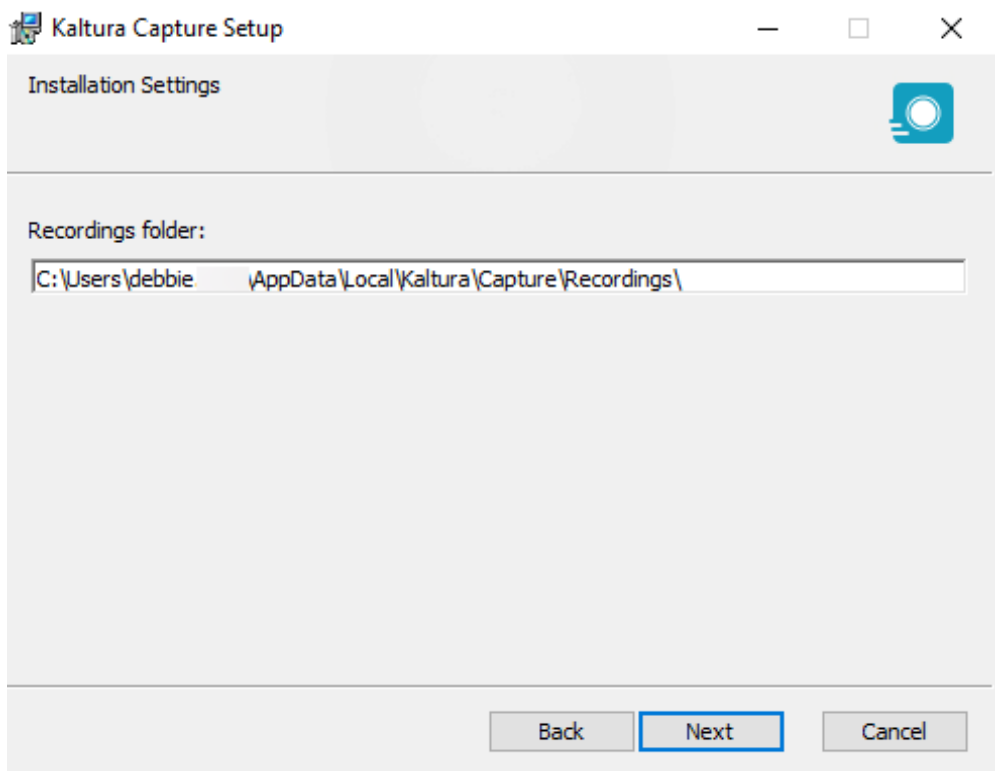

- b. Double click on KalturaCapture\_NNN.msi file. The Kaltura Capture Setup screen is displayed.

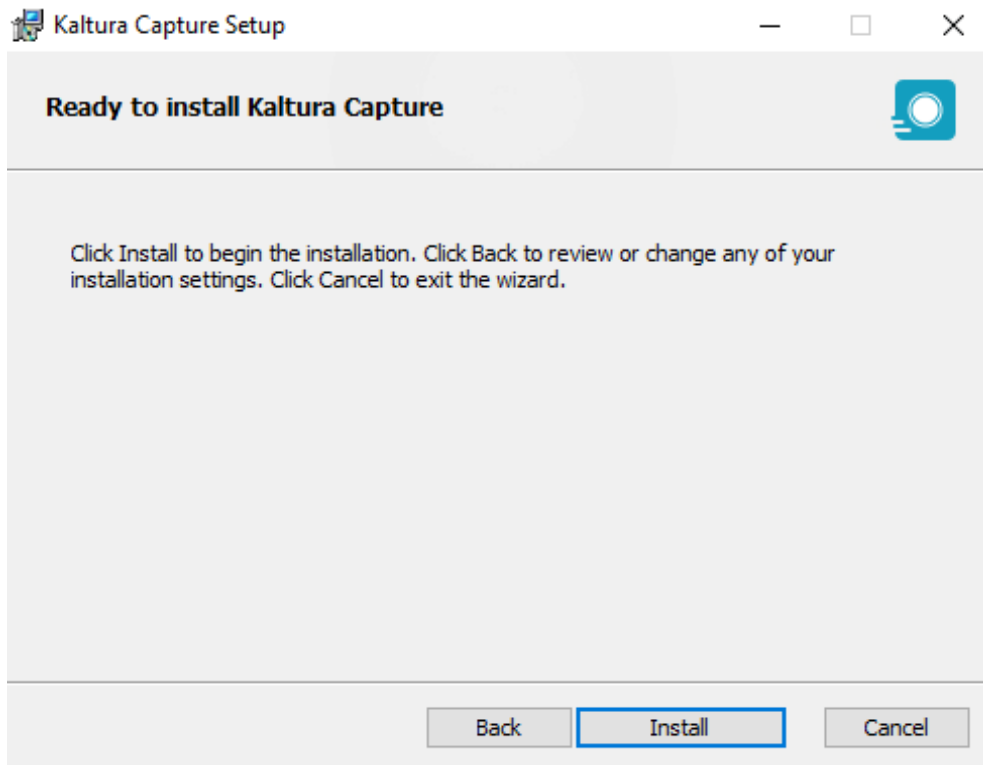

- c. Click “Next” on the Welcome Screen.

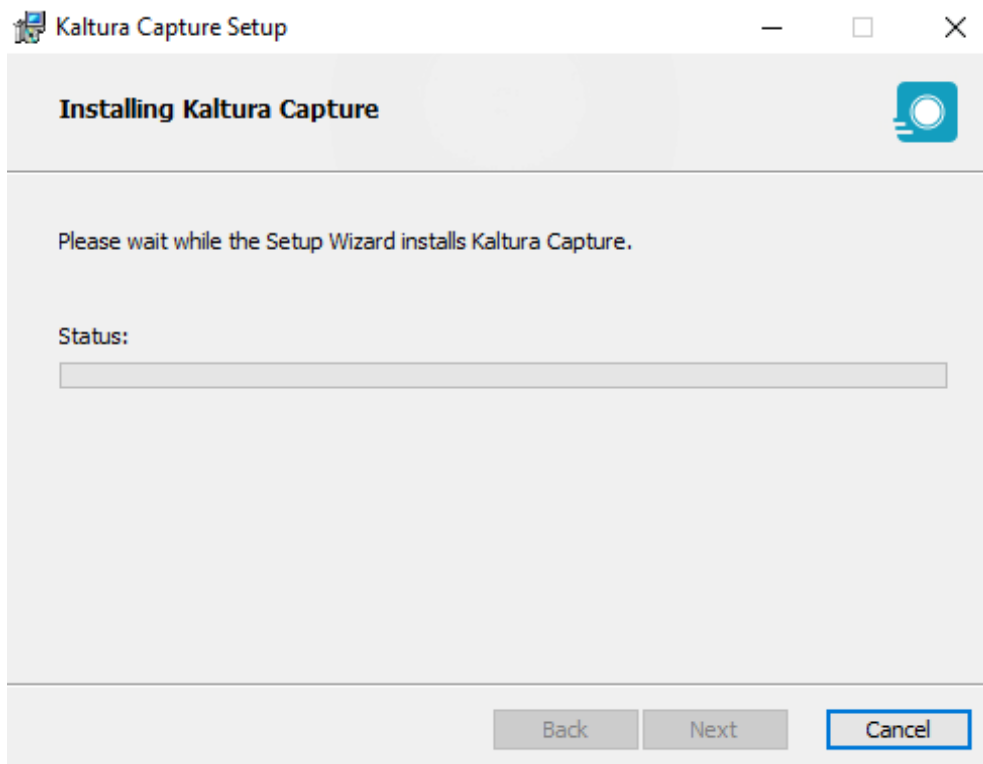

- d. On the "Installation Settings" screen click Next.

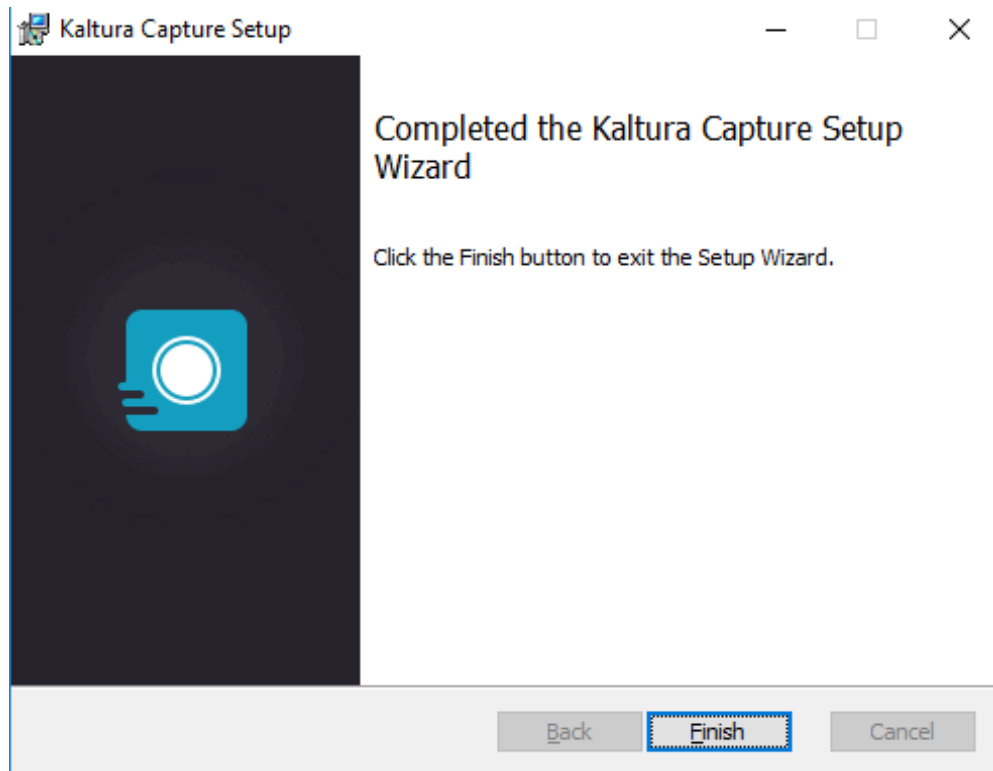

- e. (Optional) If you want to change the location of your stored recordings, enter the new location in the "Recordings Folder" field.

- f. Click "Next" to begin the installation. Click "Finish" on the final screen to complete.

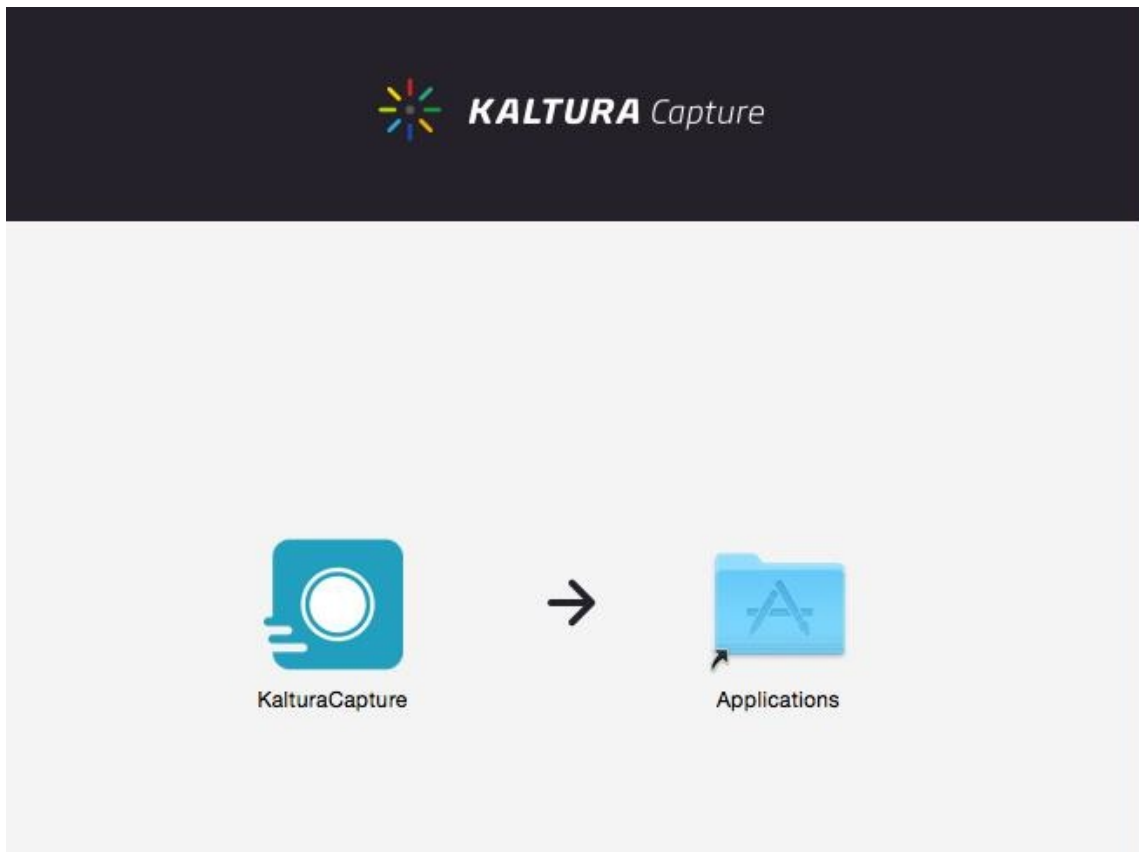

The Kaltura Capture Desktop Recorder software is installed.

3. If you are installing the Kaltura Capture software for **Mac**.
  - a. Click **Download for Mac** to download the application.
  - b. Click to download the **.dmg** file.
  - c. Double click the file to open it.

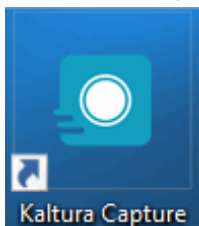

The following window is displayed.
  - d. Drag the **Kaltura Capture** application icon to the applications folder.
