> **This article is designated for administrators.**

About

The **Integration** tab shows the settings needed for connecting your site to the Kaltura platform. These settings include your Partner ID, a unique identifier for your site. With your Partner ID, you can connect to Kaltura, display and upload media, and access all of Kaltura's features.

Access the Integration tab

1. Log into your KMC account.
2. Click the **settings icon** on the navigation bar.

3. Click the **Integration** tab.

The Integration page displays.

KMC Roles and Permissions for more information.

YouTube Distribution Profiles authorization process

a. Select **Authorize** from the **three dots menu** for the distribution profile you want to authorize.

b. Enter your KMC Credentials, User Name and Password and click **Login**.

Google/YouTube is now in sync with Katlura.com to distribute the media.

Delete a YouTube Distribution Profile

a. Select **Delete** from the **three dots menu** for the desired distribution profile.

A confirmation message displays.

> ⚠ After deletion, all distribution settings for the deleted profile will no longer be available. To recreate the distribution profile, customer support will be the only option.

Entitlement

Scroll down to the Entitlement section. This section is accessible only with an entitlement account configuration. It allows you to add entitlement settings to integrated categories supporting content entitlement. You control which entitlement settings are added and enforced for selected categories in your account. Check out How to Add Entitlements to Categories for more information.

Zoom integration

The Kaltura Integration with Zoom allows you to import and configure new Zoom recordings with relevant parameters, and the integration is activated by generating the Integration Code. You can add and modify up to three Zoom accounts.

A Kaltura Secret code, generated specifically for the Zoom Integration in the KMC, is valid for a limited time. It serves to identify an administrator when enabling the Kaltura Zoom integration in Zoom. The Zoom Kaltura Secret can be generated instead of using a username and password after requesting to set up the integration.

Key points about the Kaltura Secret:

- Generated per PID, not per Zoom account integration
- Requires 'urirestrict' privilege
- Includes the clue '*fetchRegistrationPage'"

To learn how to set up Zoom integration, please visit our article Kaltura Video Integration with Zoom - Set up Guide

Webex integration

The Kaltura Webex integration is an account-level application, meaning all recordings made by Webex users under the configured account will be uploaded to Kaltura. Only Webex account admins can install the Kaltura Webex plugin from the Webex Marketplace.

Once installed and enabled:

- All Webex cloud recordings are uploaded to the configured Kaltura account.
- Only the Webex admin can edit the application configuration.
- Recordings made before installation won't be uploaded.
- The transfer to Kaltura starts immediately, but recordings may take a few

minutes to be available from Webex."

The integration is activated by generating the Integration Code. To learn how to set up Webex integration, please visit our article Kaltura Video Integration with Webex Setup Guide.
