

Instructions for Adding the Transcript Widget

 This article is designated for administrators.

The following guide you through how to add the REACH transcript widget to the Kaltura V2 player.

1. In KMC, select the desired player in the **Universal Studio**.
2. Go to the **UI Variables** section in the **Plugins** tab. Add the following:
 - a. Key = **transcript.plugin** , Value = **true**
 - b. Key = **transcript.onPage** , Value = **true**
 - c. Key = **transcript.transcriptTargetId** , Value = **transcript-player-plugin**
3. Save Player Settings

Or

1. Click **Import Plugin** and paste the following string without the quotes:
"transcript.plugin=true&transcript.onPage=true&transcript.transcriptTargetId=transcript-player-plugin"
2. Click **Import**
3. Save Player Settings

More options:

- To change the transcript mode (expand/collapse) add the following uivar:
 Key = **transcript.collapsed**
 Value = true/false (True - transcript is hidden, False - transcript is shown)
- To change the transcript default language to English add the following uivar:
 Key = **transcript.preferredLanguageKey**
 Value = en

[template("cat-subscribe")]
