

Instructions for Adding the Kaltura REACH v2 Transcript Widget

Expand/Collapse All

☰ To add the REACH v2 Plugin

- Select the player in the Universal Studio.
- Go to the uivars section in the [Plugins](#) section.
- Do one of the following:
 - Click on “Create new plugin”.
 - Name the plugin “transcript” without the quotes.
Add the next 3 parameters:
 - Name “transcriptTargetId” value “transcript-player-plugin”.
 - Name “onPage” type “Boolean”. After adding this attribute make sure you check it.
 - (Optional) Name “collapsed” type Boolean value True or False. True - transcript is hidden
False - transcript is shown.
- Click Save.

or

- Click “Import Plugin” and paste the next line without the quotes. “transcript.plugin=true&transcript.onPage=true&transcript.transcriptTargetId=transcript-player-plugin”
- If you want to set the default to Transcript mode, add the text “&transcript.collapsed=value” (value=true or false according to your selection)
- Click Import and Save..

In case you have the transcript widget set and you want to add a configuration for the Transcript Mode (expand/collapse) do the following"

1. Go to the uivars section in the Plugin section.
2. Add the following:

Key = transcript.collapsed

Value - true/false
