About

The Geo location dashboard in Rich Media CMS helps you understand where viewers are watching your content.

You can use filtering and comparison options to explore geographical engagement trends in your account.

You can:

- change the time frame for the dashboard
- compare different time periods
- filter the data
- export reports to a CSV file

The filters are automatically applied to all elements of the dashboard.

- To learn more about the metrics available in the dashboard, see Geo Location Dashboard.
- For definitions of analytics metrics, see Kaltura analytics terminology.

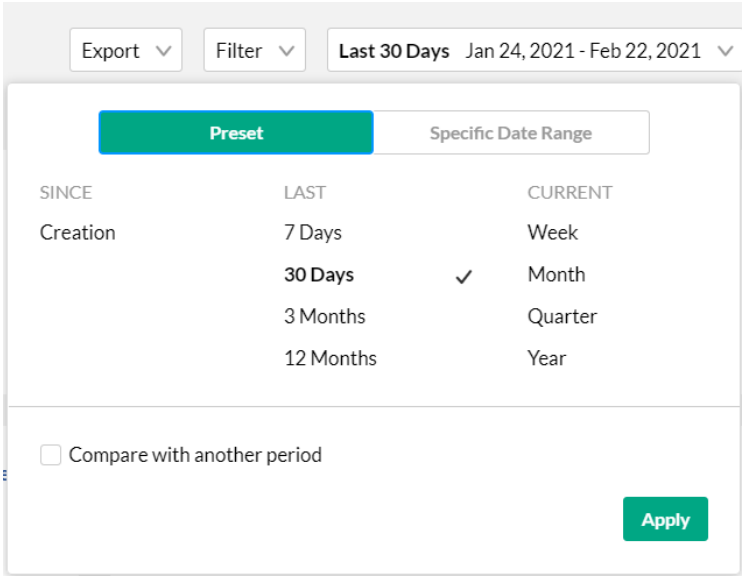

Change dashboard timeframe

Use the date picker at the top of the dashboard to change the timeframe and view data across different periods. You can select preset time periods or choose specific dates.

Preset time periods

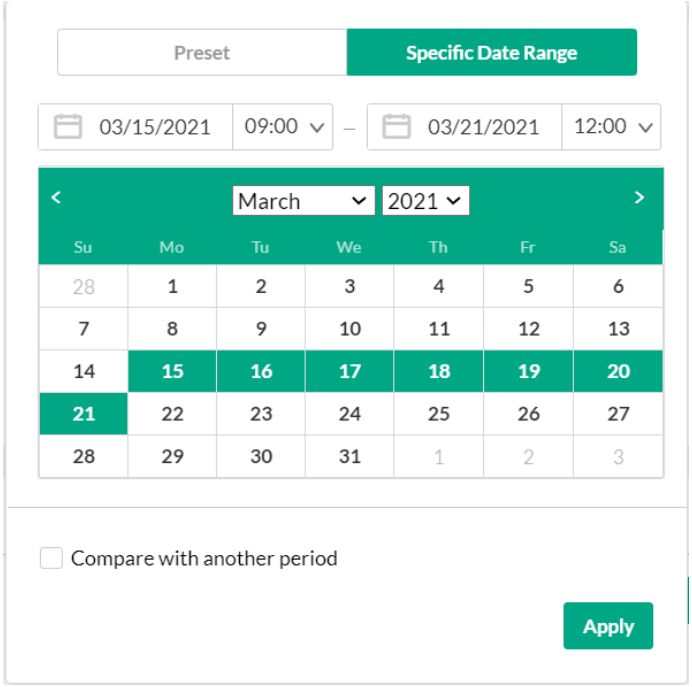

Preset time periods are a quick way of looking at recent data, such as the last week or the last month. You can also select time periods such as current year or quarter.

Selecting a custom timeframe

1. Click on the date picker and choose the Specific Date Range tab.
2. Navigate to the first date of the timeframe and click on the date in the calendar.
3. Navigate to the last date of the timeframe and click on the date in the calendar. The timeframe will appear marked on the calendar.
4. Select the hours filter to fine tune your filtering to specific hours. Note: if you want to select until midnight, please enter 23:59 as the hour.
5. Click Apply to view the dashboard data for the selected custom time period.

Compare time periods

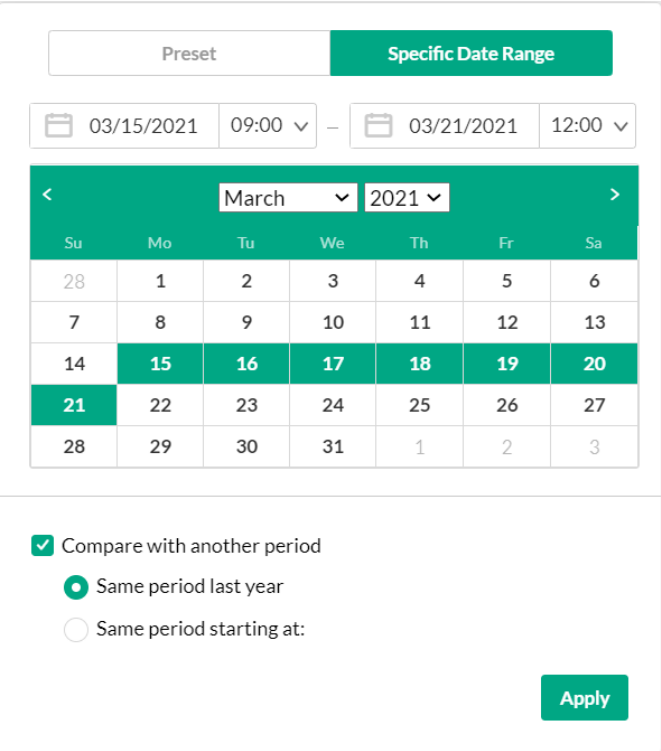

You can compare different time periods to better understand your data considering

seasonality and changes in usage following adoption of new tools and capabilities. You can choose to compare between the same period last year or pick a specific date and compare the timeframe starting from this date. You can also use the hours filter to fine tune your analytics for specific hours.

To compare time periods

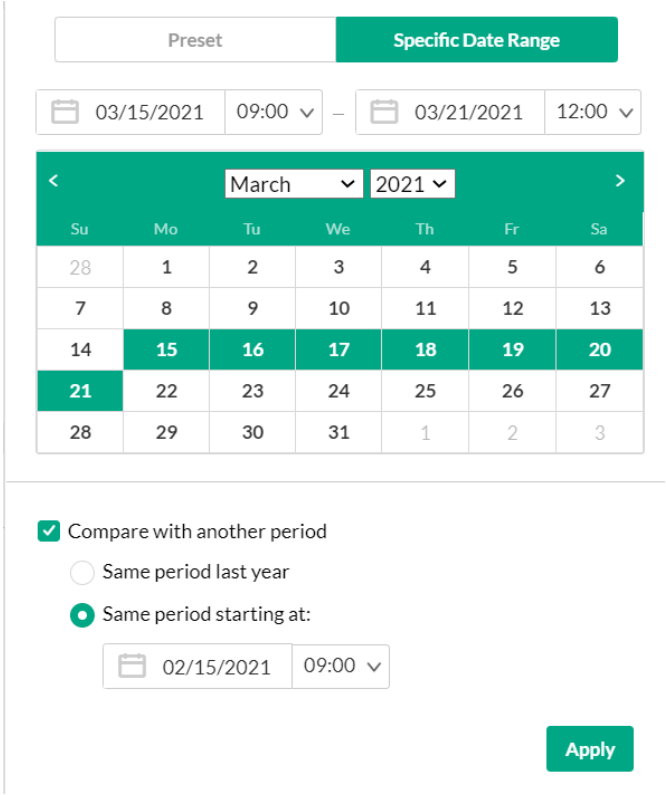

1. Click on the date picker and choose the Specific Date Range tab.
2. Select the first time period you would like to explore.
3. Check the box to Compare with Another Period.
4. Choose the second time period you would like to compare with:

- Choose **Same Period as Last Year** to compare the exact same time period the year before. For example, if the first selected time period is March 15, 2021 to March 21, 2021, the comparison will be performed to the time period of March 15, 2020 to March 21, 2020.
- Choose **Same Period Starting At** to compare with a specific time period of the same duration. You may also select to filter the analytics for the hours for a specific time range. For example, if you would like to compare analytics for March to February, select the first selected time period as March 15, 2021 to March 21, 2021. Enter the hours specific hours you want to produce the analytics for. In the following screen, analytics for 9 AM to 12PM have been chosen for rendering. Then select the Same Period Starting At and mark the starting date as February 15, 2021. The comparison will be performed for the time period of February 15, 2021 to February

21, 2021.

- Click **Apply** to view the dashboard data and compare the information from both periods.

To return to viewing a single time period

- Click on the **Exit Compare Mode** link next to the Date Picker.

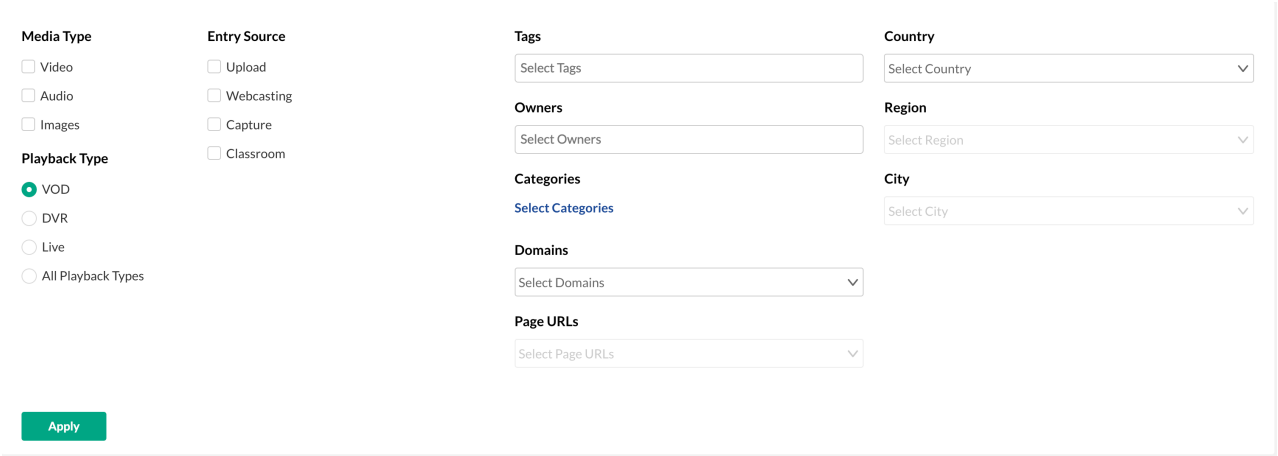

Filter the data

You can filter the dashboard data by location, tags, categories, and other dimensions.

1. Click **Filter** to open the Filters pane.
2. Select the filters you want to use.
3. Click **Apply** to display the filtered data in the dashboard.

Copyright © 2025 Kaltura Inc. All Rights Reserved. Designated trademarks and brands are the property of their respective owners. Use of this document constitutes acceptance of the Kaltura Terms of Use and Privacy Policy.

The filtering options are:

- **Media Type(s)** - video, Audio, and/or Images
- **Entry Source** - the source of the content ingested to the system. Content can be uploaded, created via Kaltura's Capture Suite, live streamed, or created in many other ways.
- **Playback Type(s)** - VOD, DVR, Live and All Media Types.
- **Tags** - the tags on the content
- **Owners** - the owners of the content
- **Categories** - click Select Categories to select from the list of categories.
- **Domains/ URL Pages** - domains and URLs pages where the video was viewed
- **Country/Region/City** - location where the created video was viewed

Export to CSV

You can export analytics data to a CSV file.

1. Click **Export**.
2. Select the data you want to export. You can select one or more options.

You'll receive a notification about the status of your export request. If filters are applied to the dashboard, the exported report includes the filtered data.

Exports are limited to 60,000 records and are also subject to execution time limits. If you receive an error, select a shorter timeframe or apply filters to reduce the report size.

Exported files expire after seven days.
