

Best Practices for Upgrading BSE Versions

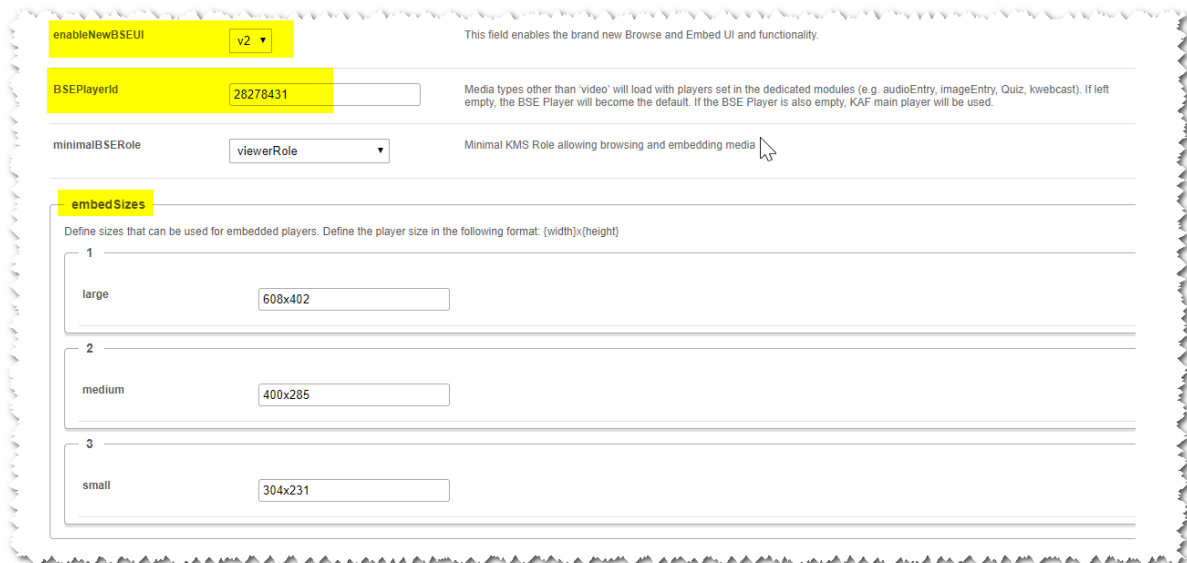

Expand/Collapse All

☰ How to upgrade the BSE version to v3?

1. Login to the application Configuration Management window.
2. Go to the [Browseandembed](#) module.
3. Check your v1 or v2 configuration. Take a note of the players set in the **uiConflid** and **BSEPlayerID** fields and sizes under **embedSizes**.

The screenshot shows a configuration window for BSE. At the top, there is a yellow header with 'enableNewBSEUI' and a dropdown menu set to 'v1'. Below this is a section titled 'embedSkins' with the instruction 'Define skins that can be used for embedded players.' It contains a list of skins, with the first one having a 'DELETED' button. The fields for the first skin are: name 'Dark skin', imgFile 'dark.png', and uiConflid '27219581'. Below this is an 'undo' link. The second section is 'embedSizes' with the instruction 'Define sizes that can be used for embedded players. Define the player size in the following format: {width}x{height}'. It contains three entries: 1. 'large' with size '608x402', 2. 'medium' with size '400x285', and 3. 'small' with size '304x231'.

The screenshot shows a configuration form with the following fields and values:

- enableNewBSEUI:** v2 (dropdown menu)
- BSEPlayerid:** 28278431 (text input)
- minimalBSERole:** viewerRole (dropdown menu)
- embedSizes:** A section with three rows:
 - 1. large: 608x402
 - 2. medium: 400x285
 - 3. small: 304x231

4. Use this opportunity to [update the players in the KMC studio](#) to the latest player version.
5. Set the [enableNewBSEUI](#) field to v3.

Now, it's decision time.

What players would you like to use in the BSE.

If you want to use the players that are used for My-Media and Media Gallery as the BSE player do the following:

1. Set the [EmbedSettingsButton](#) to Hide. Media types other than 'video' will load with players set in the dedicated modules (e.g. audioEntry, imageEntry, Quiz, kwebcast).
2. If left empty, the BSE Player will become the default.
3. If the BSE Player is also empty, the KAF main player will be used.

If you want to set a dedicated player as the BSE player (or for each media type):

1. Set the [EmbedSettingsButton](#) field to Show.
2. Navigate to the [EmbedSettings](#) section and click addEmbedSettings for each type of media you want to set with a dedicated player.
3. Enter values for the fields in the [EmbedSettings](#) section.
4. Be certain to provide a meaningful player name for the users to be able to understand what type of the player is being used. For example "with download button" or "transcript widget enabled".

For more information see [Setting a Dedicated Player for a Specific Media Type for MediaSpace and KAF Applications](#).

NOTE: You can have some types of media that use the default, and other types of media that have more than one embed setting configured.

NOTE: Some LMSs do not support the thumbnail embed and auto-play features.
