Version 4.0.4

These release notes pertain to the Kaltura Video Tool for Sakai, released August 2016.

The Kaltura Video Tool for Sakai supports Sakai version 10.x.

Resolved Issues

Issue	Description
SAK-98	The default auth code expiration has been updated from 1 min, to 40 min, to reduce timeout while preserving security
SAK-94	Kaltura.authorization.override.code was added to sakai.properties for the admin auth code to provide user enrollment data for publishing in a more secure manner.
SAK-111	When antisamy is not configured correctly, the media embedded in the CKeditor will display: No Media with a tooltip to check your antisamy configuration. This replaces the HTTP 500 error,

SAK-112	An inherent cross-domain issue is correctly marked as an exception instead of error.
---------	--

Known Issues

Issue	Description
SAK-89	You may not be able to scroll down on some iOS devices when using the Browseandembed(BSE) module.

NOTE: There is a known Sakai issue that causes LTI launches to break on mobile devices.
(Ref <https://jira.sakaiproject.org/browse/SAK-21129>)

To bypass this issue you may do the following:

- Add the following to `sakai.properties`: `portal.pda.autoredirect=false`
- Restart the Sakai server.
- On your mobile device, enable 3rd party cookies by going to **Settings -> Safari -> Block Cookies -> Always Allow**.
