Canvas Extension December 2015 Release Notes – v1.1

Version: 1.1

Date Released: December 2015

Highest Canvas Version Support: N/A

KAF version: 5.37.06

Overview

These release notes pertain to the Kaltura Video App for Canvas, released in January, 2015. Added support according to the content item message specification as part of the LTI standard.

To upgrade you will need to uninstall the Media Gallery app and re-install following the instructions in the Kaltura Video App for Canvas Deployment Guide (https://knowledge.kaltura.com/help/kaltura-video-app-for-canvas-deployment-guide). (https://knowledge.kaltura.com/help/kaltura-video-app-for-canvas-deployment-guide)

Resolved issues

ID	Details
KMS-9242	The rich-text editor integration has been transitioned and now complies with content-item message specification.
KMS-10344	You can now use the Create XML generator for the Canvas app installation.
SUP-6096	The problem with embedding Kaltura Media within Canvas Groups that resulted in an "Access Denied" error has been fixed.

NOTE: Currently, you need to map the LTI role "None" to the "PrivateOnly Role" to allow embedding content within Canvas Groups. Please note that this will also grant My Media access to users with the

"None" role.

Known Issues

ID#	Component	Summary
KMS-1932	Publish / General UI	When publishing a single item via My Media, there is an indication in the course's check boxes where the item was published. When publishing multiple items, the indication is not displayed.
KMS-2104	View Media / General UI	When viewing a media item in large screen resolutions (e.g. 1280x800), the video player size does not fit the entire iframe. Workaround: Scroll down to reach the player's control bar.

Limitations

ID#	Component	Summary
KMS-2068	My Media / View Media	When an entry is uploaded to a course via Browse, Search & Embed, the following tag is included in the media item's details: 'embedded in course'. After the entry is deleted from the specific embed HTML of the course, the tag 'embedded in course' is still displayed under the entry's details.
KMS-1291	KMC	When deleting a course from Canvas, after a new category was created in Kaltura's end, the deletion is not reflected in Kaltura and the category is not deleted. This issue causes the entry to display all the courses it was published to, even though these courses may have been deleted.

Canvas Extension February 2014 Release Notes - v1.0

Version: 1.0

Date Released: February, 2014

Highest Canvas Version Support: N/A

KAF version: 5.6.04

Overview

These release notes pertain to the Kaltura Video App for Canvas, released in February, 2014

Known Issues

ID#	Component	Summary
KMS-1932	Publish / General UI	When publishing a single item via My Media, there is an indication in the course's check boxes where the item was published. When publishing multiple items, the indication is not displayed.
KMS-2104	View Media / General UI	When viewing a media item in large screen resolutions (e.g. 1280x800), the video player size does not fit the entire iframe. Workaround: Scroll down to reach the player's control bar.

Limitations

ID#	Component	Summary
KMS-2068	My Media / View Media	When an entry is uploaded to a course via Browse, Search & Embed, the following tag is included in the media item's details: 'embedded in course'. After the entry is deleted from the specific embed HTML of the course, the tag 'embedded in course' is still displayed under the entry's details.
KMS-1291	KMC	When deleting a course from Canvas, after a new category was created in Kaltura's end, the deletion is not reflected in Kaltura and the category is not deleted. This issue causes the entry to display all the courses it was published to, even though these courses may have been deleted.

Mobile - Known issues

ID#	Component	Summary
KMS-1497	Mobile / Upload	Uploading a new recorded video using an Android device is not supported via Canvas for this release. When uploading a new 'Camcorder' video via an Android device, an error message is displayed in the upload progress.

ID#	Component	Summary
KMS-2087	Mobile / General UI	Text cannot be added into the Description field of a Media item or Media Gallery via iOS devices.
KMS-2079	Mobile / General UI	Full screen via iOS devices does not work properly.
KMS-2089	Mobile / General UI	The Browse, Search & Embed window does not fit to the iOS device screen width and may be inconvenient to control and use via Mobile.
KMS-839	View Media / Mobile	Viewing an image via a Mobile device will open an incorrect player which refers to it as a video. The 'Play' button in the middle of the player is needed to be clicked in order to view the image.
