How to create multiple shared repositories in KAF (legacy)

Content updated: 03/18/2020

Having multiple shared repositories is currently supported only in MediaSpace and not in KAF applications.
Thus, the setting addressing the number of Shared Repositories under the SharedRepositories module is not relevant for KAF environments and applies to Mediaspace legacy Video Portal only.

To enable Shared Repository in KAF applications, the Hosted module needs to be configured with this setting by the Kaltura administrator. For additional information, please see Shared Repository.

In Moodle LMS, the Shared Repository tab might display with a counter 1 addendum. Please note that this is a known issue that the product teams are looking into and it should have no impact on performance. See a demonstration in the screenshot below:
