

# How to create multiple shared repositories in KAF

Last Modified on 03/19/2020 9:55 pm IST

Multiple shared repositories are currently supported only in MediaSpace and not in KAF.

Please note that the setting in the KAF admin page is referring to the amount of shared repositories under the SharedRepositories module and applies for Mediaspace only. Additionally, the Shared Repository header displays the repository counter (with a value of 1), instead of displaying "Shared Repository" and this is a known limitation. See screenshot: <http://prntscr.com/ojyp0y>.
