### Interactive Video Paths Version 1.0.10 - May 3rd 2020

**Path Composer Version: 1.0.10**

**Path Player Version: 0.4.2**

**KMS Version: 5.99**

**Date Released: May 3, 2020**

#### What's New

- **Node Switching** - You can set the time in a subsequent video node to be able to jump directly to a point in the video instead of the beginning of the subsequent video node.
  - Playback with this option is supported on both desktop/mobile browsers as well as in the KMSGO iOS/Android app
- **Path Analytics**- Video node level analytics with number of clicks per hotspot, is available in KMC analytics only.
- **Path Analytics** - The issue where every player impression was counted as a view of the first video node was resolved.

#### Limitations

- In case a time was set on a hotspot which directs to a video node, it is not possible to set a different time for a default path to the same video node, and vice versa.

### Generic Release Notes for Interactive Video Paths

\*Please note that the first lines in this template are for the top summary table logic. It will be hidden on the front end.
