Moderation module

Last Modified on 08/17/2026 4:57 pm IDT

This article is designated for administrators.

The Moderation module is relevant to the **v2 player only**. For the v7 player, see Enable content moderation in the player.

About

Users can click on the flag icon, and then choose a reason for reporting the content. The administrator can then review content before it's published to eliminate spam and inappropriate content.

Using the **Moderation module** administrators can change the reasons for moderation text. See Moderating Content to learn more about the Rich Media CMS admin's experience.

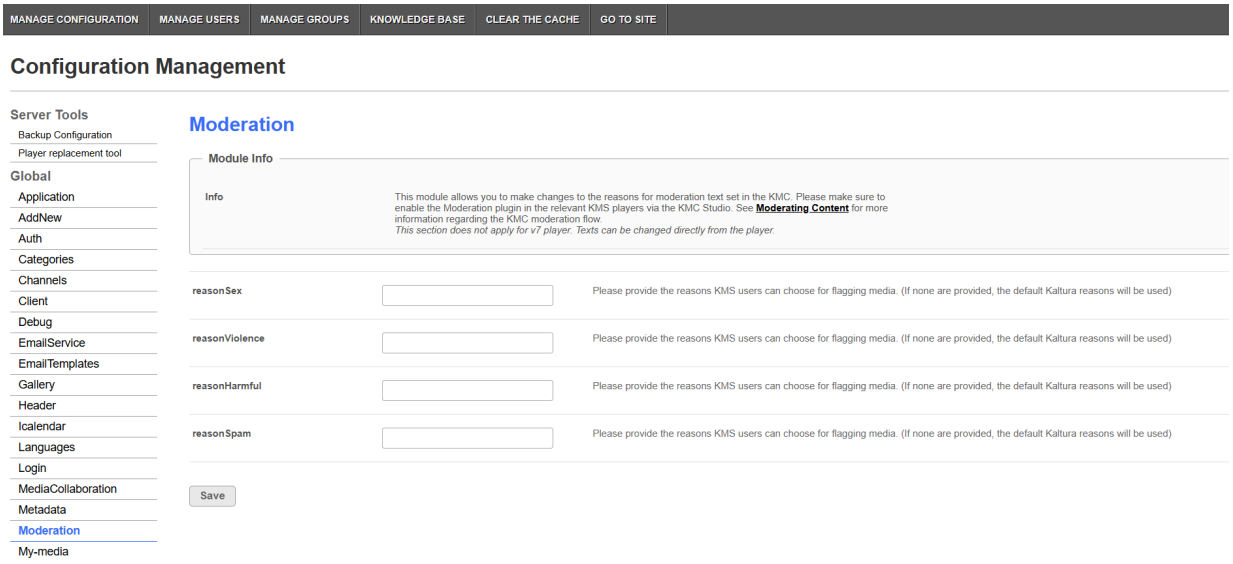

Prerequisites

The Moderation plugin must be available on the player for users to select it. To learn how, see Enable content moderation in the player.

Setup

1. Go to the Configuration Management console and navigate to the **Moderation** module.
