This article is designated for administrators.

About

The **PlaylistPage** module controls the visibility of playlists.

- To enable the channel playlist functionality, navigate to the Channelplaylists module.
- To enable the ability to add content to personal playlists, navigate to the Addtoplaylists module.
- To enable the ability for users to grab embed codes of playlists, navigate to the Embedplaylist module.

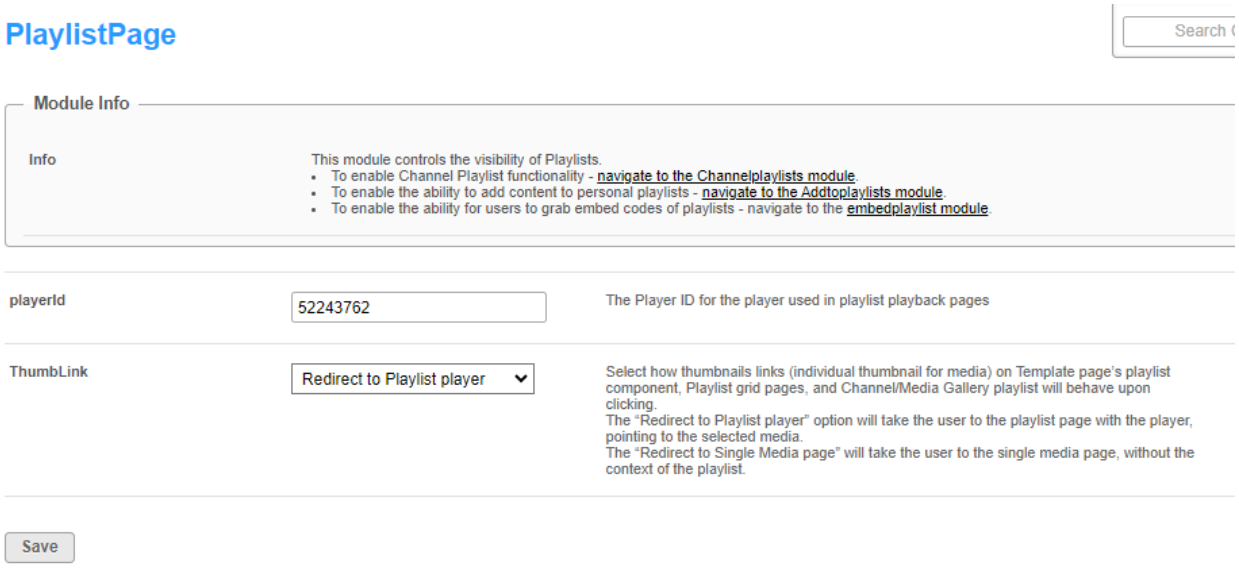

This feature requires the Theming module to be enabled.

Configure

1. Go to your Configuration Management console, locate the **Playlistpage** module in the left panel, then select it. You can also navigate directly: https://{your_site_URL}/admin/config/tab/playlistpage.

The PlaylistPage page displays.

Copyright © 2025 Kaltura Inc. All Rights Reserved. Designated trademarks and brands are the property of their respective owners. Use of this document constitutes acceptance of the Kaltura Terms of Use and Privacy Policy.

2. Configure the following:

playerID - This field should already be populated. To use a different player, go to Player Studio, locate the desired player, and copy its player ID. See Introduction to the Player Studio for more information.

Thumblink - Choose how you'd like the thumbnail link to behave:

- **Redirect to Playlist Player** - This will redirect the user to a dedicated playlist page with the player pointing to the selected media.
- **Redirect to Single Media page** - This will take the user to the single media page, without the context of the playlist.

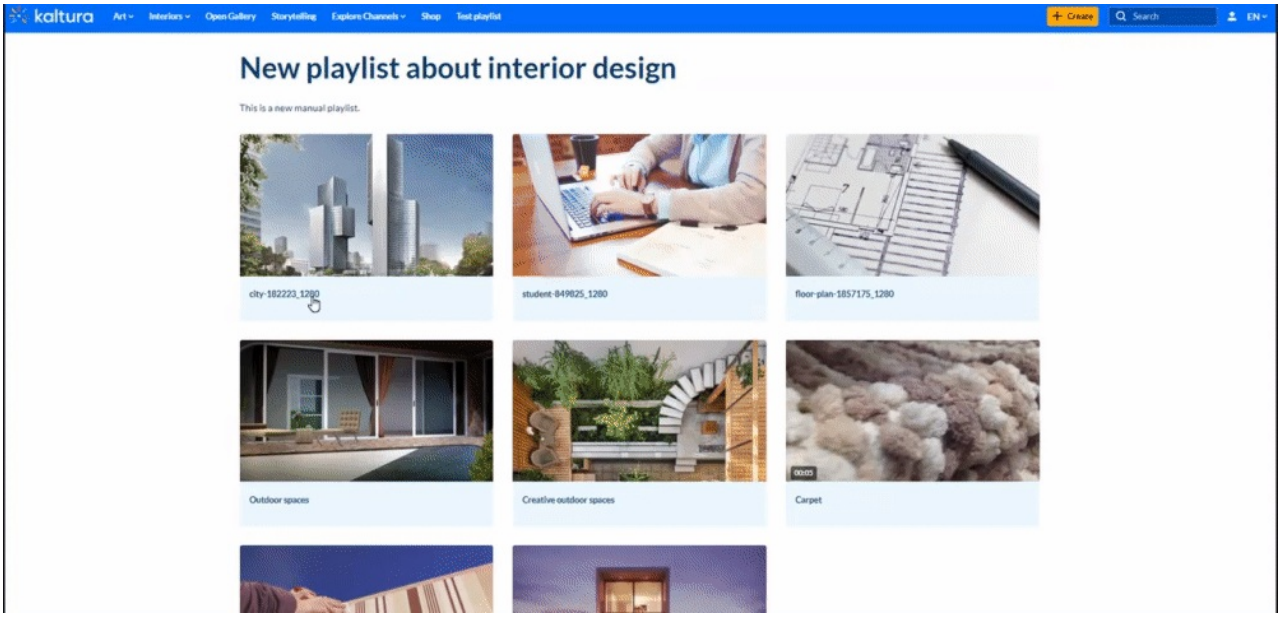

> Please note that this applies to **manual** playlists only. For **dynamic** playlists configured in the Templatepages module, such as "Most recent" or "Most viewed", (excluding "Custom playlist"), clicking on the thumbnail will exclusively direct you to the entry page and not the playlist page.

3. Click **Save**.

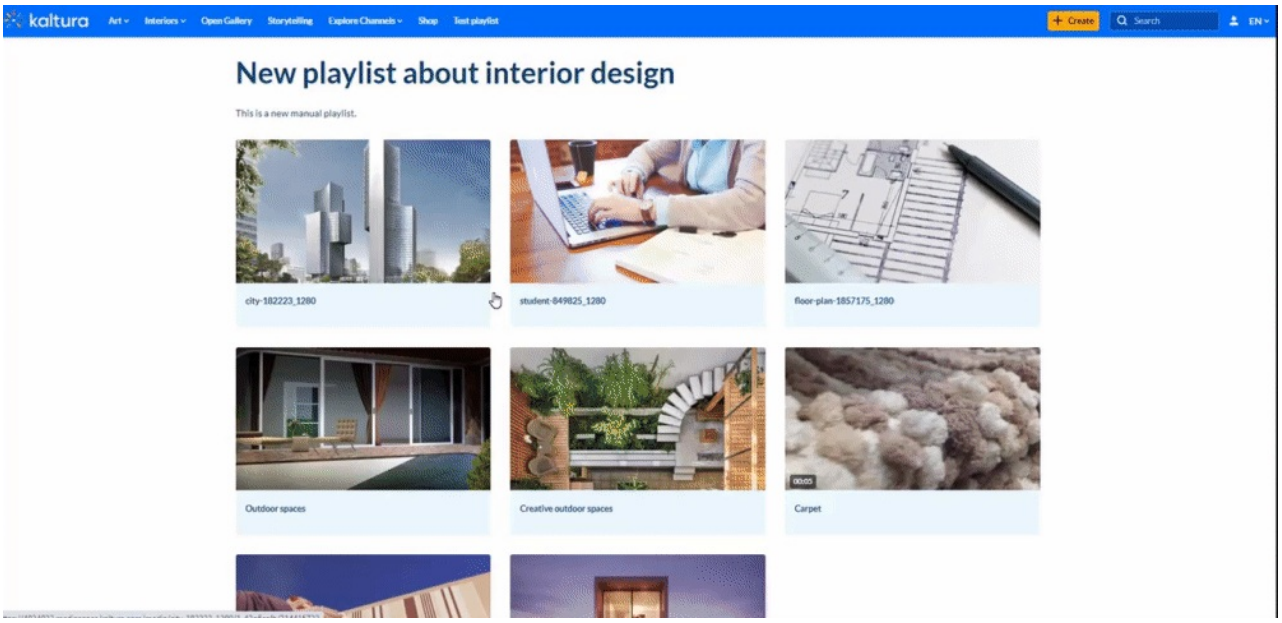

> Access the Headermenu module to change or remove the "My Playlist" link that is automatically created in the user pull down menu. Access the Theming module to turn on the theming based playlist grid page design.

Example of playlist with Thumblink set to **Redirect to Playlist player**:
