About

This module controls the visibility of playlists.

- To enable the Channel Playlist functionality, navigate to the [Channelplaylists](#) module.
- To enable the ability to add content to personal playlists, navigate to the [Addtoplaylists](#) module.
- To enable the ability for users to grab embed codes of playlists, navigate to the [Embedplaylist](#) module.

 This module depends on enabling the [Theming](#) module.

Configure

1. Go to your KMS or KAF admin page, and navigate to the **PlaylistPage** module. Your link should look like this: https://{your_KMS_URL}/admin/config/tab/playlistPage.

Search
MediaCollaboration
PlaylistPage
TimeAndDate

The **PlaylistPage** window displays.

Module Info	
Info	This module controls the visibility of Playlists. <ul style="list-style-type: none">• To enable Channel Playlist functionality - navigate to the Channelplaylists module• To enable the ability to add content to personal playlists - navigate to the Addtoplaylists module• To enable the ability for users to grab embed codes of playlists - navigate to the embedplaylist module
playertid	<input type="text" value="52243762"/> The Player ID for the player used in playlist playback pages
ThumbLink	<input type="text" value="Redirect to Playlist player"/> Select how thumbnails links (individual thumbnail for media) on Template page's playlist component, Playlist grid pages, and Channel/Media Gallery playlist will behave upon clicking. The "Redirect to Playlist player" option will take the user to the playlist page with the player, pointing to the selected media. The "Redirect to Single Media page" will take the user to the single media page, without the context of the playlist.
<input type="button" value="Save"/>	

playerID - The playerId field should already be populated. To change the playerId, see [The Kaltura Player Getting Started Guide](#).

2. **Thumblink** - Choose how you'd like the thumbnail link to behave:

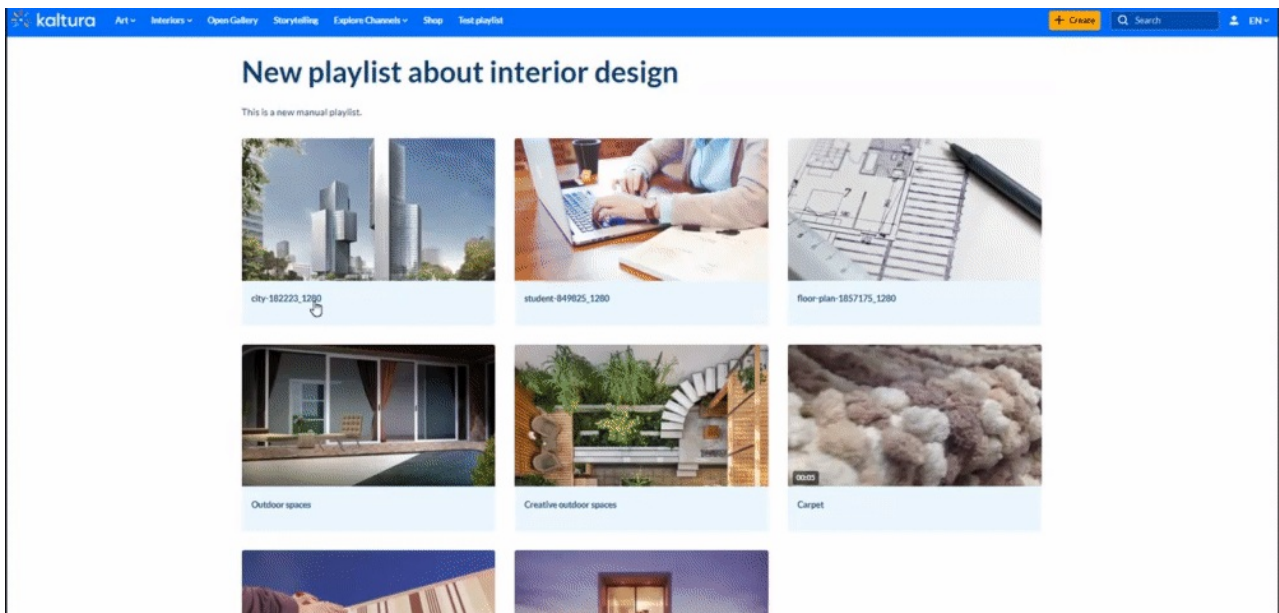

- Redirect to Playlist Player - This will redirect the user to a dedicated playlist page with the player pointing to the selected media.
- Redirect to Single Media page - This will take the user to the single media page, without the context of the playlist.

⚠ Please note that this applies to **manual** playlists only. For **dynamic** playlists configured in the [Templatepages](#) module, such as "Most recent" or "Most viewed", (excluding "Custom playlist"), clicking on the thumbnail will exclusively direct you to the entry page and not the playlist page.

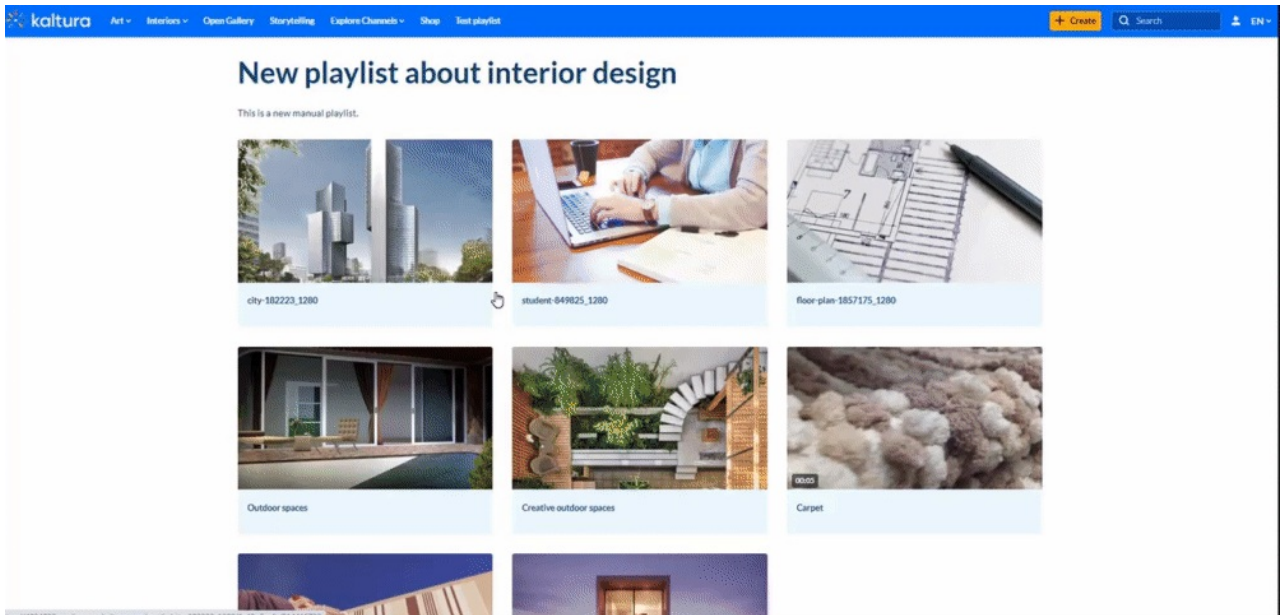

3. Click **Save**.

💡 Access the [Headermenu](#) module to change or remove the "My Playlist" link that is automatically created in the user pull down menu. Access the [Theming](#) module to turn on the theming based playlist grid page design.

Example of playlist with Thumblink set to **Redirect to Playlist player**:

Example of playlist with Thumblink set to **Redirect to single media page**:

[template("cat-subscribe")]
