KMC Release Note February 15, 2021 v6.5.0

*Please note that the first lines in this template are for the top summary table logic. It will be hidden on the front end.

KMC Version: 6.5.0

Date Released: February 15, 2021

What's New

- **Added the "Played Until" filter to the entries list.** This filter is very useful to search for redundant or legacy entries and delete them. For more information see [The Content Menu \(https://knowledge.kaltura.com/help/the-content-menu#list-videos-played-until-a-certain-date\)](https://knowledge.kaltura.com/help/the-content-menu#list-videos-played-until-a-certain-date).
- **entry/captions:** Support for additional caption languages. Contact your Kaltura representative for additional information about adding these languages. See [Using Subtitles and Captions \(https://knowledge.kaltura.com/help/using-subtitles-and-captions\)](https://knowledge.kaltura.com/help/using-subtitles-and-captions) for information on how to select the language.

The additional languages are:

- French (Canada)
- Taiwanese Mandarin
- Portuguese (Brazil)
- **Analytics:** Analytics for Manual Playlist are now available. See the article [Playlist Analytics \(https://knowledge.kaltura.com/help/playlist-analytics\)](https://knowledge.kaltura.com/help/playlist-analytics) for more information.

Resolved Issues

ID	Description
KMCNG-2292	Removed the "Export XML for FMLE" button and ""Live Content Detailed Report" link since Adobe Flash Media Live Encoder has been deprecated.

KMC Release Note January 31, 2021 v6.4.0

*Please note that the first lines in this template are for the top summary table logic. It will be hidden on the front end.

KMC Version:6.4.0

Date Released: January 31, 2021

What's New

- **Added support for WebVTT in KMC** as well as in the captions editor. Admins can upload WebVTT captions file format and edit them with the captions editor. See [Editing Captions - REACH v2](#) (<https://knowledge.kaltura.com/help/editing-captions---reach-v2>) for additional information.
- **REACH profile: Added captions label suffix field** - added the ability to set a suffix to the caption's label. The label suffix may be add separately for human captions and machine generated caption. The settings are found in the REACH profile Service Parameters Tab. See the article [Reach Profiles and Services](#) (https://knowledge.kaltura.com/help/reach-profiles-and-services#services_parameters) for details on configuring this setting.

KMC Release Note January 4, 2021 v6.3.1

*Please note that the first lines in this template are for the top summary table logic. It will be hidden on the front end.

NOTE: Creating YouTube distribution profiles is via customer support only.

KMC Release Notes April 2020 v5.25

*Please note that the first lines in this template are for the top summary table logic. It will be hidden on the front end.

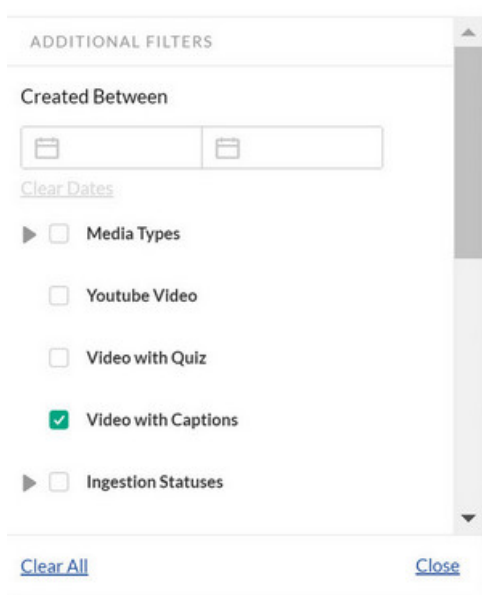

KMC Version: 5.25

Date Released: April 12, 2020

What's New

This release provides quality improvements for searching in the KMC. Algorithmic techniques for *detecting spelling errors* in text have been implemented. The following changes and additions have been made to the KMC search.

- **Captions Search** - You can search for entries with captions by selecting Videos with Captions in the Additional Filters drop down menu.

- **Elastic Search Changes** - You can search for an exact phrase by using “ “ double quotes.
- **Partial Search**

When searching for up to **two** words, N-grams are used. N-grams are like a sliding window that moves across the word - a continuous sequence of characters of the specified length.

- Each word is broken into a 3 letter token.
- If there is a match of 80% - results are rendered.

When the number of search words is **greater than two**:

- All words searched must appear in the results (in any order)
- Demonstrative words such as this/that/... and prepositions are ignored.

- **Supported Operands** - The following operands are now supported: !

Exclamation point!

- The entire phrase to the left of the ! will be partially searched.
- The entire phrase to the right of the ! will be ignored even with an exact match

For example: **Jane!Rockport** will return all entries that include a partial portion of the name.

Jane! (anything with a partial portion of the name) - **Janet**, **Jano**, **Anette** will be rendered.

The term **Rockport** will be ignored.

Every search operates with partial search, there is no need no need to use the asterisk *.
