

Overview of the Wochit Integration with Kaltura MediaSpace

Last Modified on 06/15/2020 2:35 pm IDT

The Wochit integration offers Kaltura MediaSpace users a video creation and editing tool. Wochit unifies the entire video life cycle, all within a single platform. Users have access to:

- The full Wochit Studio platform, including powerful editing tools.
- A robust content library of editorial, creative, and social assets.
- Wochit Storyboards - video templates that provide a framework for building a video.
- My Media entries that can be included in the Wochit video.
- Customized branded graphics to make videos consistent with brand guidelines.

Please contact a Wochit Customer Success Manager if you would like to:

- Add opener / closer to your videos
- Add a logo bug to your videos
- Update the default colors and fonts for the titles in your video
- Create custom text overlays that suit your brand guidelines
- Add custom transitions

In addition, contact a Wochit Success Manager in order to set up users with specific permissions or if you would like to integrate additional content sources into your Wochit platform.

NOTE: When accessing the video creation and editing tool, please be sure you are using the latest Chrome browser.
