 This article is designated for administrators.

About

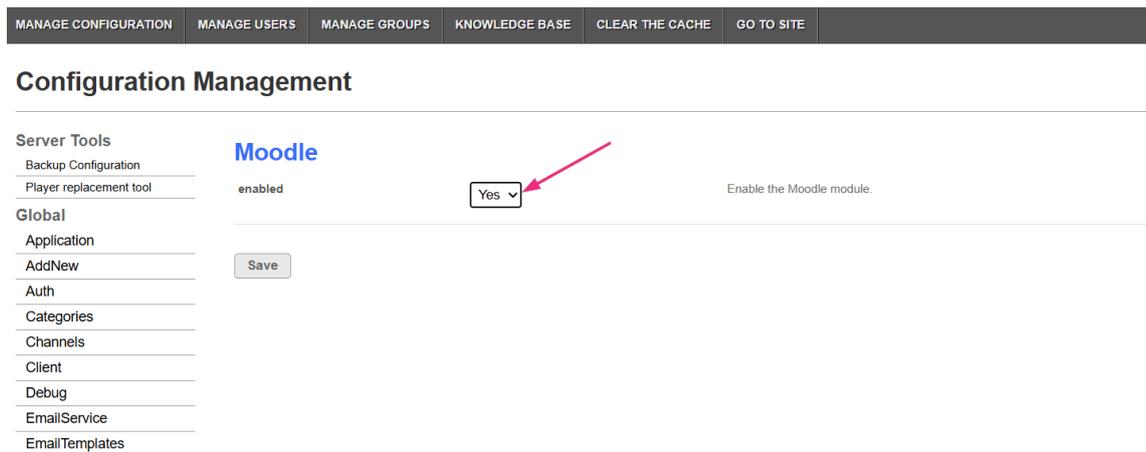

This module enables the Moodle generic module. This setting is preconfigured and should not be changed.

Configure

1. Go to your Configuration Management console and click on the Moodle module. You can also navigate to it directly using a link:

https://{your_site_URL}/admin/config/tab/moodle.

2. Set enabled to 'Yes'.

The screenshot shows the Configuration Management console with a navigation bar at the top containing: MANAGE CONFIGURATION, MANAGE USERS, MANAGE GROUPS, KNOWLEDGE BASE, CLEAR THE CACHE, and GO TO SITE. Below the navigation bar is the "Configuration Management" header. On the left is a sidebar menu with categories: Server Tools (Backup Configuration, Player replacement tool), Global, and Application (AddNew, Auth, Categories, Channels, Client, Debug, EmailService, EmailTemplates). The main content area is titled "Moodle" and shows the "enabled" status. A dropdown menu is set to "Yes" with a red arrow pointing to it. Below the dropdown is a "Save" button. To the right of the dropdown, the text "Enable the Moodle module." is visible.

3. Click **Save**.
