KMS/KAF Admin Modules

Last Modified on 10/16/2020 5:45 pm IDT

Accessibility

Field	Description
enabled	Enable the Accessibility Module.
showContrastButton	Show a button that allows users to toggle contrast on site pages
loadMore	Navigate to the Application module to enable the load more button at the bottom of each media list.

Addcontent

Field	Description
enabled	Enable the Addcontent Module.

Addtoplaylists

Field	Description
enabled	Enable the Addtoplaylists Module.
allowCreation	Allow users to create new playlists from the 'Add to Playlists' module
ownerOnly	Enforce that only the content's owner will be allowed to add to playlists from media page

Attachments

Enable this module to:

- Allow media owners to attach files of any type to their media,
- Enable media viewers to download the file before, during or after viewing.

Field	Description
enabled	Enable the Attachments Module.
showOnlyAttachmentType	Enabling this will cause transcript files (created by APIs for example) to not show in the attachments tab.
allowAnonymous	Enabling this will allow anonymous users to view and download attachments.

Captions

Field	Description
enabled	Enable the Captions Module.
thumbnailRotator	Enable thumbnail image rotation on mouseover in the captions search results
entriesPageSize	How many entries are displayed as captions search results on each page? (The default is 10)
captionsPageSize	How many caption lines are displayed for each entry in search results? (The default is 5)
allowToggleDisplayOnPlayer	Select "Yes" to allow the user to decide whether to display the caption on the player.
allowEditCaptions	Select "Yes" to enable the Caption Editor button in the Captions tab.

Field	Description
maxCharsPerLine	Editor: Max char per caption line.
preventSaveOnOverlap	Editor: do not allow saving changes if there is time overlapping.

Channelplaylists

There are three admin modules used to configure the Channel Playlists: For reference, the Channelplaylists modules are used to create and modify course playlists.

- Channelplaylists
- PlaylistPage
- Embedplaylist

Field	Description
enabled	Enable the ChannelPlaylists Module.
channelPlaylistsTabName	The title of the tab which will be added to the channel (Media Gallery) and will be presented first.
entriesSource	Add media to the playlist from the channel gallery itself, from My Media or from all entitled areas in the site.

From this page you can:

- Enable the Course Playlists feature
- Rename the Channel Playlists Tab's name

Enabling Course Playlists

Course Playlists (Channelplaylists) activated by default for the KAF LTI instances.

⊞ To enable Course Playlists

1. From the **Channelplaylists** page change the setting in the **enabled** field from **No** to **Yes**.
2. Click **Save** to apply the changes.

Renaming the Playlists Tab

Admin users can rename the Playlists tab that appears in Media Gallery page:

⋮☰ To rename the Playlists tab

1. From the **Channelplaylists** page change the setting in the **CoursePlaylistsTabName** field from **Playlists** to any value you want.
2. Click **Save** to apply the changes.

Chapters

> **NOTE:** The minimum player version required for this module to work is v2.26. The Chapters module is mandatory for the Kalturacapture module but can also work independently, without it.

Field	Description
enabled	Enable the Chapters Module.
enableFullDeck	Enables the ability to upload a document / presentation file as slides.

For additional information about chapter see the article The Kaltura Player- Editing/Deleting Chapters and Slides.

Comments

Field	Description
enabled	Enable the Comments Module.
channelCommentsProfileId	Custom Metadata profile Id for channels
entryCommentsProfileId	Custom Metadata profile Id for entries
entryCommentsCountProfileId	Custom Metadata profile Id for entry comments count

commentsAllowed	Who can add comments?
Field	Description
pageSize	Number of comments to display
sort	Sort comments by newest or oldest first?
sortReplies	Sort replies by newest or oldest first?
allowClose	Allow content owners to disable/close comments for particular entries
showInGalleries	Enable/disable showing of comments for entries in the gallery page
showInChannels	Enable/disable showing of comments for entries in the channels page
showInChannelsOnly	Show comments on media entries to users only in the context of a channel/gallery. In this case, users will not be able to see media comments if browsing to the media from search results, my media or any other context that doesn't include the context of the channel/gallery. To enable this feature, from the KAF Admin > Comments set showInChannelsOnly to Yes.
showAddTimedCommentsCheckbox	Show Add comment at mm:ss checkbox.
showPrivateCommentsConfig	Show configuration for setting private comments per gallery/channel

Contentpolicy

Field	Description
enabled	Enable the Contentpolicy Module.
contentPolicyText	Content policy for my media entries and channels. Use [b]foo[/b] - for bold,

Field	Description
	[i]foo[/i] - for italic. Full list here.

Cssupload

Use this module to upload CSS files to your KMS site.

Field	Description
enabled	Enable the Cssupload Module.
bootstrap	Upload a replacement bootstrap.min.css file to the one in use by KMS. Only useable for Bootstrap based themes.
additional	Upload an additional css file to KMS to include additional classes not defined as part of the standard Bootstrap CSS file.

Customdata

Field	Description
enabled	Enable the Customdata Module.
profileId	What is the ID of the custom metadata? Copy the custom data schema ID from KMC > Settings > Custom Data (http://www.kaltura.com/index.php/kmc/kmc4#account|metadata).
requiredFields	Select which custom data fields are required before a media can be published.
privateFields	Select the custom data fields to hide from viewers in the application. **Note: Private custom data fields remain visible to the media owner and co-editors in the Edit Entry page.**

Field	Description
	Which custom data fields will not be available as a search filters.
hiddenFiltersFields	
showInSearchResults	Allow custom data to be searchable

Customfavicon

MediaSpace Administrators can set a custom favicon, which is a small, iconic image that represents your website. Favicons are most often found in the address bar of your web browser, but they can also be used in lists of bookmarks in web browsers and feed aggregators. The KMS Admin can upload an image file through the faviconName field in this module.

Please visit this Wikipedia article for a complete list of supported icons file types by different browsers. Note that ICO file type is not supported.

Field	Description
enabled	Enable the Customfavicon Module.
faviconName	Click Upload and select an image file.
favviconURL	Click Reset to reset to the default file.

Disclaimer

KAF administrators can enforce the Terms of Agreement text and checkbox for end-users to review and/or accept before uploading or publishing content.

Field	Description
enabled	Enable the Disclaimer Module.

disclaimerProfileId	The disclaimer custom data profile id.
Field	**Description**
disclaimerField	Which custom data field is required to be checked when uploading or publishing media?.
disclaimerText	Text to show when explaining user the reason for this checkbox.
agreeText	The text to display next to the checkbox that the user accepts the terms of agreements.
displayArea	Before Upload - Terms of agreement are displayed to the user before they can contribute content. Only after the user agrees, the upload, launch screen recorder and other buttons are displayed. After checking the box, the button (or other option to upload) is enabled and the checkbox is disabled so it cannot be unchecked. Before Publish - Terms of agreement are presented as part of metadata in the upload screen and in the edit media screen. The checkbox can be configured as a required field preventing the user from publishing media if the checkbox is not selected (This is the same behavior as when required metadata is not completed). After terms are agreed to by the user (The checkbox is selected and saved) the field turns into view only and select cannot be unchecked,
agreeRequired	This is relevant only if selected to show before publish. In this case the module displays the text of the terms of agreement and does not display a checkbox for the user to select.

Downloadmedia

Enable this module to configure downloadable versions of the media for viewers to download from the media page.

Field	Description
enabled	Enable the Downloadmedia Module.
downloadRoles	Select one or more roles that can use the Downloadmedia module.

downloadFlavors	Click Add Download Flavors to configure the flavors that will be visible to the
Field	**Description** media owner to choose from. You, the admin, choose as many flavors as you want from the list of the transcoding profiles, as they appear in the KMC. You
	then can name the flavors as they should be displayed to the media owner. If no name is given, the flavor default name in Kaltura is used as the default name. The final list that is displayed to the media owner includes the list that was chosen by the admin, the flavors that are actually set (in the KMC) for this KAF instance and all other available flavors on the specific entry. It is advised that the KAF admin will verify with KMC admin what flavors are checked for the account beforehand.

Example of Downloadmedia Configuration

Editor

The Editor Module activates the Kaltura Video Editing Tools.

Field	Description

Enabled	Enable the Editor module.
Field	**Description**
enableClipping	Should users be allowed to use the editor to clip entries?
enableTrimming	Should users be allowed to use the editor to trim entries?
showClipAttribution	Should a clipped entry page contain an attribution to the original entry?
clipperProfileId	Metadata profile ID for clipping permissions. Allows media owners and co-editors to decide whether the media is allowed to be clipped by other users.
keaPlayerId	What is the player ID of the player used in Kaltura Video Editing Tools? Leave empty to use the default. \
keaDocumentationURL	What is the link to the custom Kaltura Video Editing Tools documentation. Leave empty to use the default.
keaPreviewPlayerId	What is the player ID of the preview player used in Kaltura Video Editing Tools? Leave empty to use the default.
keaCustomCss	Upload CSS file. .
downloadLocales	Download a zip file which contains all texts for all built-in locales. These can be used to create custom languages.
uploadCustomLanguage	
languageCode	Select the language code. Note that the selected language code should match an existing localized version of the application.
localeFile	Upload your customized .json file.

Emailnotifications

This module should be enabled if you choose to get Email Notifications. For more information on how to set up notifications and the different types of notifications, see Email Notifications.

Click on the dedicated page link in this screen to get to the page where you can enable the different email notification events and define the email templates for each. See the section on Setting Email Notifications and Channel Subscriptions for more information.

Field	Description
enabled	Enable the Emailnotifications module.

Embed

Field	Description
enabled	Enable the Embed module.
secureEmbed	Use secure embed. MediaSpace entitlements are enforced on media that is embedded in external sites. When embedding restricted or private media to your sites and blogs, you will be prompted to authenticate (if not already authenticated). If a user is authorized to watch the media according to the entitlements defined in MediaSpace, the media will play. Otherwise, a message will be displayed that they are not authorized to watch the media.
When secure Embed is enabled the following fields (in italics) are displayed	For additional information about this feature, see the article: Enhanced Settings for Secure Embed in KMS/KAF.
autoRedirect	Select True to automatically-redirect the user to the SSO login page in case the user is not authenticated with MediaSpace (If the user is globally authenticated, they will be auto-authenticated by MediaSpace then redirected back to the page with the video). Select False to display a message to the user so that the user

Field	Description
	can manually select when/whether to re-authenticate.

Field	Description
autoRedirectIframe	When autoRedirectIframe is disabled (default), the redirect for authentication will use the top browser window. When autoRedirectIframe is enabled, the redirect will occur in the iframe
autoRedirectIframe	When autoRedirectIframe is disabled (default), the redirect for authentication will use the top browser window. When autoRedirectIframe is enabled, the redirect will occur in the iframe.
autoRedirectMessageHTML	HTML text to display while the user is auto redirected to the login page.
notAuthenticatedHTML	HTML text (may include links) to display inside the iFrame if autoRedirect is set to False
notAuthorizedHTML	HTML text (may include links) to display inside the iFrame in case Kaltura Entitlement authorization fails
noCategoryEmbedAccessHTML	HTML text (may include links) to display inside the Embed tab of an entry page accessed not via a category/channel/gallery, when requireCategoryContext=Yes
noCategoryPlayAccessHTML	HTML text (may include links) to display inside the iFrame, in case category-level embed grab and play are disabled for the category/gallery from where embed was originally grabbed, and/or when requireCategoryContext=Yes and a (legacy) secured embed is missing a category context.
overrideCSSURL	URL to an alternate CSS, to allow a customer to customize the iFrame design to fit corporate style guide
categoryLevelEmbed	Allow KMS category/channel (or KAF course gallery) managers to prevent grabbing and playing embed content from a specific category. Depends on CategoryEmbed/ChannelEmbed modules. For more information see here.
requireCategoryContext	Set to Yes, in conjunction with categoryLevelEmbed=Yes, to make sure embeds are only grabbed from category/gallery contexts. Grabbing an embed from a regular (context-less) entry page will not be allowed. NOTE: Setting this to Yes will cause secured embeds that lack a category context to stop authorizing

Field	Description
	playback
showMediaURL	Show link to media page.
emailShare	Sharing by email
allowEmbedIframeShare	Allow/Restrict sharing using 'iframe'. This configuration is only supported for non v2 supported players
embedResponsiveness	Enable/Disable 'Responsive Sizing' option in the embed view.
embedAllowed	Use 'Ctrl' to select multiple roles.
embedSkins	Define skins that can be used for embedded players.
name	What is the name of the skin? The skin name is displayed when the user selects an embed skin.
imgFile	What is the relative path to the image file on the server? The image file represents how the skin looks.
uiConfId	What is the numerical value of the player ID to use in the embed code?
embedSizes	Define sizes that can be used for embedded players. Define the player size in the following format: {width}x{height}
large	608x402

medium	400x285
Field	Description
small	304x231

| | |

Embedplaylist

The configuration page dedicated to activating and configuring the Embed Feature is accessed from the **Configuration Management** page **Modules** sub-category **Embedplaylist**.

Clicking **Embedplaylist** opens the Embed configuration page.

From this page you can:

- View a description of the module
- Enable the Embed Feature
- Choose to use secure embed
- Select one or more roles that can embed playlists (i.e. use the Embed Playlist feature)
- Choose to allow users to embed channel playlists
- Set the player(s) a user can use to embed playlists

Field	Description
enabled	Enable the Embedplaylist module.
secureEmbed	Choose Yes to use secure embed or choose No not to use secure embed.
playlistEmbedAllowed	Select one or more roles that can use the Embed Playlist feature. Use 'Ctrl' to select multiple roles.
channelPlaylistEmbedAllowed	Choose Yes to allow users to embed channel playlists or choose No not to allow users to embed channel playlists.
players	Enter information about the players a user can use to embed playlists - one being horizontal and one being vertical. The first player in the list is used as the default player. Add additional players by clicking the + Add "players" blue button. Delete players by clicking the DELETE red button.
playerDisplayName	Type a player name that displays to users.

playerId	Type the player ID found in the KMC studio.
Field	Description
embedSizes	Select the embed sizes for the player.
embedSizeCustom	Type a custom embed size ("width"x"height" in pixels). Add additional custom embed sizes by clicking the + Add "embedSizeCustom" blue button. Delete custom embed sizes by clicking the DELETE red button.

Entrydesign

Enable the entryDesign Module to allow media owners and co-editors to specify the look and feel of the entry view page.

Field	Description
enabled	Enable the Entrydesign module.
entryDesignRole	Roles or specific users that are allowed to design entries.
players	Fill in the player ID and the player display name you want to allow users to use in the entry page. If left blank, the site's default player is used.
+Add "Players"	
playerDisplayName	Enter the Player Display Name.
playerId	Enter the Player ID.
entryType	Select an entry type from the drop down menu.
showEmbedPlayerOption	• **Force Entrydesign Player in Embed Code** - Owner/co-editor will not see "Set as Embed Player" button. Players designated in the Embed module will be overridden. If selected, designated Entrydesign player will be used in the embed code of the Share area. • **Use Embed Module Players** - This is the default option which disables this feature. Owner/co-editor will not see "Set as Embed Player" button. The embed code in the share area will use the settings designated in the Embed

Field	Description
	module. • **User Selects** - Owner/co-editor will see "Set as Embed Player" button. Players designated in the Embed module will be overridden. When selected, this player will also be used in the embed code of the Share area.
allowedElements	Which elements should be customizable in the entry page display.
allowCSS	Set to yes to allow the entry owner to use CSS to change the look and feel of the page.
allowLogoChange	Set to yes to allow the entry owner to set a new logo for KMS when viewing the entry.
showLastArchived	Select Yes to allow live entry owners to change the default settings of showing a link to the last archived video on top of the live page.

Facebook

Add the open-graph metadata to the view media page to support embedding videos in a Facebook feed by simply copy and pasting the URL of the media page.

To use this feature 'allowAnonymous' in 'auth' module must be enabled as well and 'Default Entitlement Enforcement' on the partner should be disabled

Field	Description
enabled	Enable the Facebook Module.
fPlayerId	What is the player ID (uiConf ID) of the player that plays videos on Facebook?
useHighestQuality	Use the best quality flavor that can be played in Facebook.

Headermenu

Define the items that are displayed on the top right in the header menu.

Field	Description
enabled	Enable the Headermenu Module.
type	Type can be My Media, My Playlists, URL, Menu, My Channels, My History, My LIve Rooms.
label	For a URL, enter the URL label. For a Menu, enter the label.

History

The History module makes it easy to find videos you recently watched by allowing the end users to reach the "My History" page and view their watch history. You can control your watch history by deleting your history. You can delete individual items or delete your entire history.

Field	Description
enabled	Enable the History Module.
resumePlayback	Enable the "Resume Playback" feature. This feature will enable an indicator bar below the thumbnail of videos, showing the progress of the user in it.
resumeplaybackOptions	
videoEndPercent	Reaching this percentage of the video or higher will count as 'finished watching' the video
videoEndSeconds	Reaching this amount of seconds before the end of the video or lower will count as 'finished watching' the video
barColorBackground	The color of the progress bar background

Field	Description
barColorDone	The color of the finished progress bar
emptyHistory	Fill in the message the users will see when reaching an empty History page.
deleteAllText	Fill in the message the users will see when clicking on the clear all history button.
showUnlisted	Show/hide 'unlisted' entries from the users history.
supportSecureEmbed	Allow videos in a secure embed to be added to the user's history.
addToHistoryTrigger	Choose the way videos are added to the user's history. Play - videos will be added with a play click. View - videos will be added by landing on the video page. (Entries of type image will always be triggered by view event)

Home

Use this module to configure your MediaSpace home page/landing page. For more information seeSetting the Home Page - Kaltura MediaSpace.

Field	Description
enabled	Enable the Home Module.
thumbnailRotator	Enable thumbnail image rotation on mouseover in homepage
carouselEnabled	Show the carousel.
carouselInterval	interval (in miliseconds) between carousel transitions
carouselStyle	Select carousel style.
carousel	
	Select content for the Carousel:

Field	Description
type	Most Recent - All published videos in channel or categories by creation date Most Viewed - All published videos in channel or categories by number of plays Most Liked - All published videos in channel or categories by number of likes Trending Now - Most played media in the last 24-48 hours Trending this week - Most played media in the last 7 days Trending this month - Most played media in the last 30 days Most Commented - All published videos in channel or categories by number of comments Recently Watched - Individual user's viewing history Continue Watching - Individual user's history of none-completed videos Custom Playlist Channel Content
carouselBg	carousel background color
lists	To add playlists to your home page. You can use playlists that have been configured in the KMC.
type	Select content for the list from the type drop down.
Name	Enter the list name to display. Choose "custom" to enter a KMC playlistid.

Hotspots

Hotspots are an extra layer of info on top of the player with the option to link them to an external URL or specific time in the video.
Minimum supported player version: 2.75 Click here to navigate to the KMC Universal studio. Please make sure to update the Entrydesign module players to version: 2.75 in the KMC Studio.

If there are players used in the KMS/KAF instance that do not meet the minimum player requirement, an alert is displayed listing those players with their UIconf IDs.

The ability to Save the Hotspots module's configuration is available only after upgrading legacy players.

Field	Description
enabled	Enable the Hotspots Module.

Field	Description

Importchannel

Channel/Media Gallery Managers have the ability to import content from other Channels/Media Galleries they manage.

| Field	Description
enabled	Enable the Importchannel Module.

Kalturacapture

Creates Kaltura capture entries using the Kaltura Capture application.

Field	Description
enabled	Enable the Kalturacapture Module.
AllowDownloadingClient	Allow end users to download the Kaltura Capture dektop application from KMS/KAF.
AddNewLabel	Add new Kaltura Capture label.
allowedRoles	Who can create Kaltura Capture? if a role is selected, any role above it will also be able to create Kaltura Capture.
entryURL	What URL to show the user after the captured media is uploaded. Leave blank for KMS base URL.

Kmsapi

Use this module to enable the KMS Go application on your mobile device.

For more information about the KMS Go mobile app, see the articles about Kaltura MediaSpace Go (KMS Go).

Field	Description
enabled	Enable the Kmsapi module.
IOSAppId	The Apple Application ID that will be used when smart banners on iOS Safari will be displayed.
iOSBundleId	The Apple application id that will be used when smart banners on IOS Safari will be displayed.
AndroidAppId	The Android Application ID that will be used when smart banners on Android mobile browsers will be displayed.
deepLinkSubDomain	The iOS/Andorid branded application subdomain. Used for deep-linking
storeAppName	The name of the branded mobile application
appStoreAppId	(iOS) Your app's App Store ID, used to send users to the App Store when the app isn't installed
storeAppLogoUrl	The URL for the branded application logo. Image dimensions: 64x64 pixels. Keep empty to use default
homeCarouselMode	Use Web home carousel configuration or configure it manually for mobile.
Home_Playlists	Define the playlists for the native home screen. You can add and delete playlists using this field.

DELETE or +Add Home_Playlists	Description
type	Select the type of playlist from the drop down menu.
name	Enter the playlist name that will be displayed.
channelId	(Channel Playlists only) Enter the custom channel id for Channel Playlists
playlistID	(Custom Playlists only) Enter the custom playlist id.
detailsView	(Custom Playlists only) When set to 'No', the default view of playlist (Thumbnail view) will be used.
playerAutoPlayOnLoad	When entry page loads, should the video begin playing automatically?
mobileSessionLifeTime	The length of a mobile KMS user session (in seconds). Note that every KMS SaaS version deployment will force a new session (on the appColorR of the value input here).
appColorR	The R value for RGB that is used as the custom brand color of the application. Input a number between 0-255. Note: RGB.alpha fields cannot be partially filled out.
appColorG	The G value for RGB that is used as the custom brand color of the app. Input a number between 0-255. Note: RGB alpha fields cannot be partially filled out.
appColorB	The B value for RGB that is used as the custom brand color of the app. Input a number between 0-255. Note: RGB alpha fields cannot be partially filled out.
splashImageUrl	Set an image URL for the KMS app splash screen. Use an image size of 192x131. The URL must be a secured URL (begin with https://).

Field	Description
	Enable to allow downloading media for offline viewing.
downloadEnabled downloadQuality	Chooses the rendition/flavor of the video to be available for users to download for offline playback. High will download the highest quality possible (in terms of dimensions and bitrate) and low the lowest.
smartBannerEnabled	Enable smart banner for Android and iOS applications
dontShowLoginInMyPage	Don't show login button in my page.
uploadEnabled	Enable displaying the upload functionality.
showMySubscriptionSection	Enable displaying the list of channels the user is subscribed to, on top of the home screen.
playlistContinuousPlay	Select whether the playlist entries should play automatically one after the other.
allowPushNotifications	Allow push notifications.
hideInspireMe	Selects whether to hide the inspire me section
hidePublisherName	Selects whether to hide the entry's publisher name
iosTermsOfUse	Add the terms of use that will be displayed to the user on IOS devices. Note: For translation fill this field with 'terms_of_use_ios' and translate via PO file
androidTermsOfUse	Add the terms of use that will be displayed to the user on Android devices. Note: For translation fill this field with 'terms_of_use_android' and translate via PO file
spotlightSearchEnabled	Enable spotlight Search from outside the application on IOS.

Field	Description
adTagUrl	Add the URL for the IMA (Interactive Media Ads) to enable DFP (DoubleClick for Publishers - showing ads on top of videos)
idleTimeout	Max allowed idle time before sessions timeout (in seconds). To disable idle timeout, enter 0.
disableIosBackgroundSnapshot	Disable the cache background snapshot in iOS.
shareUrlAsDeepLinks	Selects whether the share URLs will be deep links.
deleteRecordedContent	Once enabled, content that is recorded using KMS Go will not be stored on the user's device after upload.

Oembed

The oEmbed Endpoint in KMS is able to accept the entry page URL as input and not only the copied link from the 'share / oEmbed' tab.

In addition to this type of URL:

https://[MediaSpace URL]/id/[entry ID]?width=400&height=285&playerId=12345678

this type of URL may be used:

https://[MediaSpace URL]/media/[Entry Name]/[Entry ID].

This improves the flexibility with oEmbed-supported destinations.

Field	Description
enabled	Enable the Oembed Module.
type	Which type of oEmbed code should be displayed? 'Short' is the common type. For example: http://url.for.mediaspace/id/xyz, where xyz is the media asset ID (entry ID). 'Short' links are valid URLs. A 'Short' link entered in a browser loads MediaSpace with the video loaded in the player. 'Full' is much longer than 'Short.' Use 'Full' when your oEmbed 'consumer' cannot convert a link embed code to a full oEmbed request.
enableCustomization	When a user selects 'oEmbed' for the 'Select Embed Type' option, should the options for selecting a player skin and player size be displayed? Note: If you enable customization, your oEmbed must be able to accept the oEmbed link format that is created.
playerId	What player ID (uiConf ID) should be used to display the embedded video?

Field	Description
height	What is the height (in pixels) of the oEmbed player? Enter only the number.
width	What is the width (in pixels) of the oEmbed player? Enter only the number.

Note: If you are not sure, enter 'default' (without quotes) or leave the playerId field empty. MediaSpace will use the value of the first embedSkin config.

Publish

Field	Description
enabled	Enable the Publish Module.
defaultPublishStatusOnUpload	Define the default privacy for each newly uploaded media. Prior to this change, each newly uploaded media's status was set to "Private" as the default. Now, MediaSpace administrators can configure every newly uploaded media to be set as "Unlisted" by default, and allow the media owner to change the privacy mode. To configure this option, set the required value for **defaultPublishStatusOnUpload**. Note that this configuration is applicable only if Unlisted mode is enabled on your MediaSpace instance. You can check if it is enabled under Application > enableUnlisted.
manPublish	Enable publish to a list of categories - from the menu, media, and upload. Disable this if you do not have access to the list of categories.

REACH

REACH offers two different service options, human captioning and ASR machine transcription, which can be used separately or together. Captions ordered directly within the Kaltura interface are automatically delivered and can be edited for quick review and modification.

Field	Description	Values

enabled	Enable the REACH Module.	
reachProfileId	ID of the REACH profile to use with Kaltura MediaSpace or KAF.The Reach profile includes the credit, and other parameters such as: moderation flow, file types etc.	At least one profile must be selected.
orderScreenText	Text to show on the order task form: 1000 characters max.	
unitFieldName	Select a label for the 'Unit' field . If left empty "Unit" will be used.	
availableServices	Allow users to select the following services.	Combinations of all available services, features are TAT. For example: HUMAN, CAPTIONS, THIRTY_MINUTES HUMAN, CAPTIONS, SIX_HOURS HUMAN, CAPTIONS, FORTY_EIGHT_HOURS HUMAN, CAPTIONS, BEST_EFFORT HUMAN, CAPTIONS, TWENTY_FOUR_HOURS HUMAN, TRANSLATION, TWENTY_FOUR_HOURS HUMAN, TRANSLATION, IMMEDIATE HUMAN, TRANSLATION, THREE_HOURS HUMAN, TRANSLATION,

		SIX_HOURS
		MACHINE, TRANSLATION, SIX_HOURS
		MACHINE, TRANSLATION, BEST_EFFORT
		MACHINE, CAPTIONS, THREE_HOURS
		MACHINE, CAPTIONS, SIX_HOURS
		MACHINE, CAPTIONS, THIRTY_MINUTES
viewEntryRequestsRole	Select the role required to access the entry task requests screen.	privateOnlyRole adminRole unmoderatedAdmin Role Co-Editor Owner
orderer	Select who can order tasks.	Specific Roles Specific Users
orderRole	The minimal role required to order tasks.	privateOnly Role admin Role unmoderatedAdmin Role Co-Editor Owner
serviceTypeDefault	Select the default service type.	Machine Human
serviceFeatureDefault	Select the default service	Captions

	feature	Translation Alignment Audio Description
sourceLanguageDefault	Select the default source language.	See Source Media Languages.
turnaroundTimeDefault	Select the default turnaround time.	
serviceSelectionRole	The minimal role required for service selection.	privateOnly Role admin Role unmoderatedAdmin Role Specific Users
featureSelectionRole	The minimal role required for feature selection.	privateOnly Role admin Role unmoderatedAdmin Role Specific Users
TatSelectionRole	The minimal role required for TAT selection.	privateOnly Role admin Role unmoderatedAdmin Role Specific Users
speakerSelectionRole	The minimal role required for	privateOnly Role

	speaker selection.	admin Role unmoderatedAdmin Role
dashboardAccessRole	The minimal role required to aprove task requests.	Specific Users admin Role unmoderatedAdmin Role
requestApprovalRole	The minimal role required to approve task requests.	Specific Users admin Role unmoderatedAdmin Role
notifiedUsers	Select specific users who will receive email notifications about items pending moderation. To customize notifications, go to email notifications configuration.	Enter the user name. Existing users may be found using the autocomplete feature: type in the first three characters of the user's name.
trustedUsers	Select users who do not need approvals for their requests.	
categoryRuleOrderRole		Channel Manager Channel Owner
captionEditRole		privateOnly Role admin Role unmoderatedAdmin Role Co-Editor Owner
allowProfilePermissions	Allow individual profile	Select Yes and then configure

| | configurations. | values for each profile according the the values in this article. |

Recorder

Field	Description
enabled	Enable the Recorder Module.
allowedRole	Select the users allowed to use this tool
maxRecordingTime	Set the maximum allowed recording time in seconds. (leave empty to remove limit)
browserNotSupportedText	Select the text to display when a user reaches the tool from a none supported browser. Use HTML to add links (
	Fill in a custom conversion profile ID for recordings. Leave the field empty to use the default conversion profile
	Enter the id of the player that will be used to view recorded media before upload. The Player version must be v3.

Recorder

Field	Description
enabled	Enable the Recorder Module.

allowedRole	Select the users allowed to use this tool
Field	Description
maxRecordingTime	Set the maximum allowed recording time in seconds. (leave empty to remove limit)
browserNotSupportedText	Select the text to display when a user reaches the tool from a none supported browser. Use HTML to add links (
	Fill in a custom conversion profile ID for recordings. Leave the field empty to use the default conversion profile
	Enter the id of the player that will be used to view recorded media before upload. The Player version must be v3.

Related

Field	Description
enabled	Enable the Related Module.
limit	How many related videos can be displayed?

Replacemedia

ReplaceMedia

Media owners can replace their media, while keeping metadata, URL and analytics in place. The same functionality as in the KMC is available in KMS and is configurable in the Replacemedia module.

> **NOTE:** Only video entries may be replaced. Any time-based metadata on the entry will be kept in place and may be out of sync with the new media, The metadata should be manually adjusted.

Field	
enabled	Enable the Replacemedia module.

SAML

Please see the Kaltura MediaSpace™ SAML Integration Guide for the setup configuration.

This module allows you to allow users to Authenticate into MediaSpace using the SAML 2.0 standard.

1. In the SAML module configuration, select Yes to enable the SAML module.
2. Enter values for the following:

Parameter	Description
metadataMode	Select Manual or Automatic.
enableMultiIdp	Enable using multiple IDPs (requires MultiAuth to be enabled)
loginRedirectUrl	The URL to redirect the user when authentication is required (relevant only if metadata mode is set to Manual).
logoutRedirectUrl	The URL to redirect the user after logo. NOTE: This field is only applicable if useInternalLogoutPage is set to "No" and metadataMode is set to "Manual". When the MediaSpace session expires, the user is redirected to this URL, along with a SAML logout request. This request is made via POST request. MediaSpace does not expire login session from the identity provider. For the logout request, MediaSpace uses the value that was provided in the NameID element in the SAML login request.
relayStateUrlParam	The parameter name that the IdP uses to pass the URL to redirect the user back after a successful login. This defines the default place to redirect the user to in case it is not passed as part of request. For example for PingFederate it would be TARGET. For other SAML providers it is typically RelayState.
enableMetadataEndPoint	Customers that require a standard XML response that exposes the metadata configured on the Service Provider side, can use this configuration. This will expose the configured parameters of the SAML module through the following

Parameter	Description
	URL: http://[MediaSpace Server]/saml/index/sp-metadata
useInternalLogoutPage	Internal "Yes" logout will expire the MediaSpace session and display message to user but will not redirect to IdP logout page. For example: You have signed out from MediaSpace. For improved security, we recommend that you close all browser windows at the end of your online session.
allowKeepAlive	When Yes, session will be extended upon user's interaction. Default is No.
logoutText	If useInternalLogoutPage is set to Yes you can define a custom message to users. You can use HTML tags to display a message.
shouldNestRelayState	Select whether to concatenate the relay state as query-string or as URL-encoded query string.
shouldPost	When set to Yes, the SAML request will be posted instead of using get. Default is No.
shouldDecodeRelayState	When set to Yes, RelayState will be decoded before redirect..
name	The entity ID of the service provider (MediaSpace) as it was configured in your Identity Provider. For example: https://partner_id.mediaspace.kaltura.com (this will be used as the SP entity ID).
host	The host of the MediaSpace instance. For example: partner_id.mediaspace.kaltura.com. NOTE: The host may be configured only with a single URL per KMS instance. If you are using your own alias for MediaSpace (for example: video.company.com) you should use that alias.
relayState	The value for the relative URL to redirect the user after login if a relay state is not passed as part of the authentication request. The default is "/".
nameIdFormat	Transient ▾ This field is used for SP initiated mode only and will not work if the NameID is not released. • Transient - Recommended for Shibboleth setup • Persistent - Preferred setup. • None - set to remove the NameIDPolicy element from the SAML request.
	When encryption is required for the SAML response, enter the certificate information. Paste the content of the crt file without the comments line. See Generating a Certificate Workflow. NOTE: You should paste the content without the 2 comment lines: (----BEGIN… and -----END…)

certificate - (optional)	All text should be in a single line with no spaces, so remove all the breaklines in the generated file
	
	The certificate value is used to encrypt the response provided by the IdP. The following example shows how the crt file would look including the comment lines and the extra line breaks that should be removed:

	-----END RSA PRIVATE KEY-----</pre>

host	The entity ID of the identity provider. For example: https://openidp.feide.no
issuer	The entity ID of the identity provider. For example: https://openidp.feide.no
name	Friendly display name for the Identity
certFilePath	Provider (only for self-hosted MediaSpace) The absolute file system path of the crt file provided by Identity Provider.
certFileContent	The content of the certification file provided by Identity Provider that is used to

validate the signature of the response.

Complete the following values in the attributes section:

Parameter	Description
userIdAttribute	The SAML attribute containing the user ID. When blank, NameID element will be used.
firstNameAttribute	The SAML attribute containing the first name.
lastNameAttribute	The SAML attribute containing the last name.
emailAttribute	The SAML attribute containing the email.
logoutUrlAttribute	The SAML attribute containing the logout URL. When configured, if useInternalLogoutPage is set to No, the value passed in the attribute will be used instead of the value set in logoutRedirectUrl.

Complete the following values in the defaultRole section:

Parameter	Description
defaultRole	The default role for authenticated SAML user.
allowDefaultRole	Select Yes or No.
role	Select the default role that should be assigned to each user that is authenticated.

Complete the following values in the roleAttributes section:

Parameter	Description
roleAttributes	Map attribute values to KMS roles.
attribute	The SAML attribute name.
value	The SAML attribute value
role	Mapped KMS role.

NOTE: If more than one attribute value is found (a user belongs to multiple groups) the user will be mapped to the role that was defined in the last roleAttribute found.

Complete the following values in the roleAttributesCsv section:

Parameter	Description
roleAttributesCsv	Map attribute values to KMS roles. Each CSV row should contain 3 values: attributeName,attributeValue,mediaSpaceRole. Invalid MediaSpace roles would not be saved.
Load new CSV	Click to upload a CSV with role attributes.
storageDataEntryId	Data entry ID that stores the parsed csv data

In the blockAuthorizationAttributes (optional) map individual groups and values that are returned in the SAML response and should lead to unauthorizing an authenticated user from using MediaSpace. Complete the following values in the blockAuthorizationAttributes section: (Optional)

Parameter	Description
blockAuthorizationAttributes	Mapping of attributes and values that blocks authorization
attribute	The SAML attribute name.
value	The SAML attribute value

The unauthorizedBehavior is applicable only if the blockAuthorizationAttributes is used. If usersuseInternalUnauthorizedPage is in use (set to 'yes') you can optionally set the text to be presented to the unauthorized user. If usersuseInternalUnauthorizedPage is not used, you can specify the URL where the user will be redirected to.Complete the following values in the unauthorizedBehavior section: (Optional)

Parameter	Description
unauthorizedBehavior	Mapping of attributes and values that blocks authorization
useInternalUnauthorizedPage	Default is 'Yes'. If set to 'No' unauthorizedRedirectUrl will be used.
unauthorizedRedirectUrl	(Optional) The URL to redirect the authenticated, but unauthorized users. Should be used only in cases where the customer wants authenticated users to be redirected to his self hosted page.
unauthorizedText	(Optional) Text to be shown in the internal unauthorized page, leave empty to use the default text.

From the MediaSpace Configuration Management, Go to the Auth module.

For SP Initiated configuration enter:

- Saml_Model_SpInitiated in the authNAdapter text box and click Add custom value
- Saml_Model_SpInitiated in the authZAdapter text box and click Add custom value

For IdP Initiated configuration enter:

- Saml_Model_IdpInitiated in the authNAdapter text box and click Add custom value
- Saml_Model_IdpInitiated in the authZAdapter text box and click Add custom value

Samlgroupsync

Please see the Kaltura SAML Group Sync Administrator's Guide for the setup configuration.

Scheduling

Use the Scheduling module to:

- Set Entry's publish schedule to categories or channels.
- Sort and filter entries by scheduling range in my-media.

Field	Description
enabled	Enable the Scheduling module.
dateFormat	Define the date format for the time presented.

Sidemymedia

Limitations

Only **one** module's sidebar is shown in KAF.

Sidebars from other modules

Related module for KMS, Hostedrelated module for KAF.

Field	Description
enabled	Enable the Sidemymedia module.
limit	How many Sidemymedia items can be displayed?

Field	Description
showInCategory	Should the module render the sidebar if in category context?

Sideplaylists

Field	Description
enabled	Enable the Sideplaylists module.
limit	How many items can be displayed in a side playlist?
items	Define playlists to display on the right side next to the player.
label	Enter the playlist label.
id	Enter the ID of the playlist to display.

Ssogroupsync

Please see the Kaltura SSO Group Sync Administrator's Guide for the setup configuration.

Staticpages

You can add static/content pages to your MediaSpace site. Static pages can be used, for example, to create help pages, privacy policies etc. From the KMS Admin, enable the *Staticpages* module. After you enable the module, you can add multiple pages to your site. Each page should include:

Field	Description
Module Info	

description	Create custom static pages in KMS.
Field	Description
styling	It is best to use Bootstrap css classes in the markup.
custom styling	Use inline styles, or consider using the cssupload Module.
enabled	Enable the Staticpages module.
title	The title of your page to display as the page header
pageSlug	What is the *unique* semantics slug for your page? (e.g. www.yourvideoportal/>) The unique identifier for the page to be accessed as a URL. For example, if you provide 'privacy' as a slug, you can add links to your static page as [MediaSpace URL]/privacy. You can add these links in Navigation or Headermenu modules or anywhere you want to include links to your pages within the MediaSpace site.
permission	Select the minimum role allowed that can access this page. Set as anonymousRole to keep this page public.Use the "guest override" field to allow anonymous users to access to static pages even if anonymous is turned of in KMS.
content	What is the content of this page? You can use HTML and Bootstrap.

Styling

The Styling Module allows you to customize the look and feel of your site. The new style can be created from the linked page, and previewed and shared with other admins before applying the changes to the site.
Use the link provided in the Description field to access the new Styling Page.
You can preview and share the new settings with other admins before applying the changes to the site.

Field	Description
enabled	Enable the Styling Module.
fonts	Select +Add"fonts" These fonts will be available in custom CSS and in the Font

Field	Description
	selectbox on the styling page
familyName	Font family name that will be used in CSS and will be appended to the Font select box on the styling page.
fallbackFonts	Font families and font types which should be used as a fallback when desired font family is not ready or doesn't exist (comma-separated list, like in CSS specifications). Specifying generic font type (like `serif` or `monospace`) is mandatory. Example: `'Helvetica Neue',Arial,sans-serif`
type	Font assets source type: • **System font** - use world-wide supported font by name • **Import from URL** - use external font service (like Google Fonts) • **Upload files** - upload your own font asset files
isCssApplied	Click Reset to clear. This field indicates whether a style created in this module is applied on KMS or not.

Thumbnails

Field	Description
enabled	Enable the Thumbnails module.
extensionWhitelist	Define allowed extensions, example: jpg, png, jpeg, gif (one item per extension)

Twitter

Important Note

Twitter requires that every domain is approved by them.

The Twitter approval process includes testing the experience across various platforms, as well as re-validating it periodically.

More information and how this can be done can be found here

Field	Description
enabled	Enable the Twitter module.
tPlayerId	What is the player ID (uiConf ID) of the player that plays videos on Twitter? This should be a V2 play.
siteUserName	@username of website, to be used as value for twitter:site meta tag
useHighestQuality	Use the best quality flavor that can be played in Facebook.

Userreports

Channel/Course Managers can measure and analyse the user engagement and contribution to their channels/courses. These contextual analytics allow channel/course managers to answer important questions such as: What are the most popular videos in the channel/course? Who are the members that watch the most videos and what is their drop off rate? Who are the members that contribute the most media to the channel/course?

The mediaAnalytics field should be enabled to display the Analytics page. The Analytics page is accessed from the 'Actions' drop down of the entry page. The Analytics report is identical to the analytics for the entry in the KMC.

Field	Description
enabled	Enable the Userreports module.
mediaAnalytics	Enable media analytics for media owner
showUserEmailColumn	Show user email in the channel engagement report
num_days	Default number of days

page_size	Default page size
Field	**Description**
	Fill in a version 2 player ID to be used in the analytics pages.
playerIdv2	Leave empty to use default.

Watchlater

This module controls the ability to add videos to a Watch Later playlist.

Users can set up a queue of clips as a playlist, that will be ready to watch whenever they have time.

See Create and Add Media to a Playlist.

Field	Description
enabled	Enable the Watchlater Module.
