

Embed module

Last Modified on 09/30/2024 12:59 pm IDT

 This article is designated for administrators.

About

Embed code is used to embed Kaltura media in a website, HTML page, or any other online tool. The Embed module allows administrators to make this functionality available to users (depending on their role) through the Share tab located on the Media Page in MediaSpace and KAF applications.

Configure

Enable the Module

enabled - When enabled, the Share tab **is** displayed alongside the Details tab for users on a Media page in MediaSpace and KAF applications. Users can click on the Share tab to find various sharing media options. See the example below.

Secure Embed

secureEmbed - Setting secureEmbed to Yes, provides an additional layer of protection, by which users will first have to log in to view the content. Kaltura MediaSpace entitlements will be enforced on media that is embedded in external sites. When embedding restricted or private media to your sites and blogs, you will be prompted to authenticate (if not already authenticated). The media will play if a user is authorized to watch the media according to the entitlements defined in MediaSpace. Otherwise, a message will be displayed that they are not authorized to watch the media.

In the iframe embed example below, secureEmbed is set to **No**.

```
<iframe id="kaltura_player"
src="http://cdnapi.kaltura.com/p/2311101/sp/231110100/embedIframeJs/uiconf_id/40179251/partner_id/2311101?
iframeembed=true&playerId=kaltura_player&entry_id=1_3inimdwj&flashvars[streamerType]=auto&flashvars[lo
calizationCode]=en&flashvars[leadWithHTML5]=true&flashvars[sideBarContainer.plugin]=true&flashv
ars[sideBarContainer.position]=left&flashvars[sideBarContainer.clickToClose]=true&flashvars[chapters.plug
in]=true&flashvars[chapters.layout]=vertical&flashvars[chapters.thumbnailRotator]=false&flashvars[s
treamSelector.plugin]=true&flashvars[EmbedPlayer.SpinnerTarget]=videoHolder&flashvars[dualScreen.plug
in]=true&flashvars[allowfullscreen]=true&flashvars[webkitallowfullscreen]=true&flashvars[mozAllowFullScreen]=true&flashvars[frameborder="0" title="Kaltura Player"></iframe>
```

In the iframe embed example below, secureEmbed is set to **Yes**.

```
<iframe id="kmseembed-1_3inimdwj" width="400" height="285"
src="http://2311101.mediaspace.kaltura.com/embed/secure/iframe/entryId/1_3inimdwj/uiConfId/40179251?
flashvars[streamerType]=auto&flashvars[localizationCode]=en&flashvars[leadWithHTML5]=true&flash
vars[sideBarContainer.plugin]=true&flashvars[sideBarContainer.position]=left&flashvars[sideBarContainer.
clickToClose]=true&flashvars[chapters.plugin]=true&flashvars[chapters.layout]=vertical&flashvars[ch
apters.thumbnailRotator]=false&flashvars[streamSelector.plugin]=true&flashvars[EmbedPlayer.SpinnerTar
get]=videoHolder&flashvars[dualScreen.plugin]=true&flashvars[" class="kmseembed" allowfullscreen
webkitallowfullscreen mozAllowFullScreen frameborder="0" title="Kaltura Player"></iframe>
```

As you can see from the above examples, when secureEmbed is set to **No**, the iframe embed code displays a direct link to the media. When secureEmbed is set to **Yes**, the iframe embed code displays a direct link to **MediaSpace** which requires the user to enter login credentials to view the content.

For additional information about this feature, see [Enhanced Settings for Secure Embed in KMS/KAF](#).

If secureEmbed is set to **Yes**, additional functionality is displayed.

Additional Functionality for Secure Embed

autoRedirect -

Select **Yes** to automatically redirect the user to the SSO login page in case the user is not authenticated with MediaSpace. (If the user is globally authenticated, they will be auto-authenticated by MediaSpace and then redirected back to the page with the video.) In the example below, the user is not globally authenticated, therefore the Sign In page displays.

Kaltura Training Sign In

User ID

Password

Sign in

[Forgot Password](#) [Cancel](#)

Select **No** to display a message to the user so that the user can manually select when/whether to re-authenticate. In the example below, the user has not been automatically redirected and must manually click "Click here to login" to log in to MediaSpace.

autoReirectiframe -

When autoRedirect is set to **Yes** and autoRedirectIframe is set to **No** (default), the redirect for authentication will use the top browser window.

Kaltura Training Sign In

User ID

Password

Sign in

[Forgot Password](#) [Cancel](#)

When `autoRedirect` is set to **Yes** and `autoRedirectIframe` is set to **Yes**, the redirect will occur in the iframe.

Kaltura Training Sign In

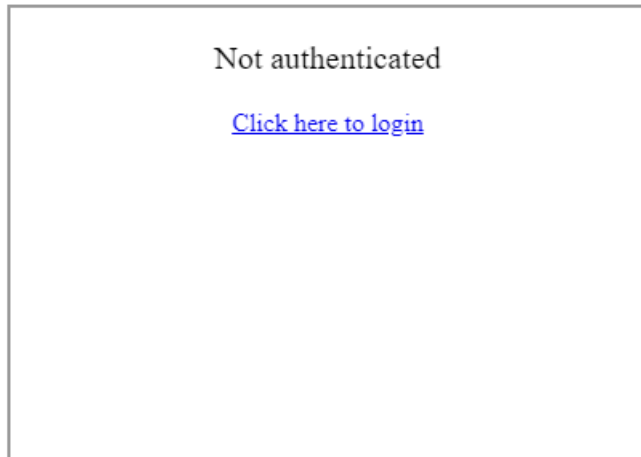

User ID

autoRedirectMessageHTML - HTML text to display while the user is auto-redirected to the login page. In the example below, the HTML text was set to "Please login with your MediaSpace credentials."

Please login with your MediaSpace credentials.

notAuthenticatedHTML - HTML text (may include links) to display inside the iFrame if `autoRedirect` is set to No. In the example below, the HTML text was set to "Not authenticated".

notAuthorizedHTML - HTML text (may include links) to display inside the iFrame in case Kaltura Entitlement authorization fails.

In the example below, the HTML text was set to "You are not authorized to view this media". The user was prompted to log into KMS and authentication was successful, but upon doing so, was unable to access the media because the user did not have the authorization to view the media.

Note: If you wish to further restrict users from viewing media in KMS, you may consider disabling `allowAnonomous` in the [Auth module](#).

noCategoryEmbedAccessHTML - HTML text (may include links) to display inside the Embed tab of an entry page accessed not via a category/channel/gallery when `requireCategoryContext` is set to **Yes**.

In the example below, `requireCategoryContext` was set to **Yes** and the user did not access the entry page via a category/channel/gallery. In other words, the user attempted to grab an embed of an entry from a category/channel that prevents embed grabbing. The HTML text was set to that shown in the orange shaded box.

Details **Share** 🔍

ACTIONS ▾

Link to Media Page **Embed** Email

Grabbing of this content is possible only from locations which allow it. Please see the "Appears In" field under the Details tab for potential locations which may allow publishing. If no allowing location is found, please contact your administrator, or reach out to the content owner directly

noCategoryPlayAccessHTML - HTML text (may include links) to display inside the iFrame when category-level embed grab and play are disabled for the category/gallery from where embed was originally grabbed, and/or when requireCategoryContext is set to **Yes** and a (legacy) secured embed is missing a category context. In the example below, the HTML text was set to "Playback of this content is only allowed on its original publishing destination. Please contact owner or support".

overrideCSSURL - URL to an alternate Cascading Style Sheet (CSS) to allow a customer to customize the iFrame design to fit the corporate style guide.

categoryLevelEmbed - Allow KMS category/channel (or KAF course gallery) managers to prevent grabbing and playing embed content from a specific category. Depends on CategoryEmbed/ChannelEmbed modules. For more information see [Enhanced Settings for Secure Embed in KMS/KAF](#).

requireCategoryContext - Set to **Yes**, in conjunction with categoryLevelEmbed set to **Yes**, to make sure embeds are only grabbed from category/gallery contexts. Grabbing an embed from a regular (context-less) entry page will not be allowed. NOTE: Setting this to **Yes** will cause secured embeds that lack a category context to stop authorizing playback. The requireCategoryContext field should only be enabled for customers not already using the secureEmbed feature. Otherwise, secured embeds already embedded will play content that was previously accessible. Again, for more information see [Enhanced Settings for Secure Embed in KMS/KAF](#).

Allow/Restrict Sharing Using iFrame

allowEmbedIframeShare - Allow/Restrict sharing using iFrame. This configuration is only supported for non-v2 supported players. When allowEmbedIframeShare is set to No, the option to choose iframe embed is eliminated.

Enable/Disable Responsive Sizing

embedResponsiveness - Enable/Disable the 'Responsive Sizing' option in the embed view. When enabled, the Responsive Sizing toggle button is displayed on the Share > Embed tab.

The screenshot shows the Kaltura embed configuration interface. At the top, there are three tabs: 'Link to Media Page', 'Embed', and 'Email'. The 'Embed' tab is selected. Below the tabs is a code editor showing the embed code. A red box highlights the 'allowfullscreen' attribute in the code. Below the code editor, there are several configuration options:

- Start & End Time:** Two input fields for 'Start at' and 'End at', both set to '00:00:00'.
- Player Skin:** Two radio buttons for selecting a player skin. The first skin is selected.
- Maximum Player Size:** Three input fields for 'Maximum Player Size', with values '608x402', '400x285', and '200x2'.
- Responsive Sizing:** A toggle switch labeled 'Responsive Sizing' is turned on, highlighted with a red box.

Select the User Roles Allowed to Embed

embedAllowed - Select one or more roles that can use the Embed functionality. In the following example, viewerRole, privateOnlyRole, adminRole, and unmoderatedAdminRole are all allowed to use the Embed functionality.

embedAllowed

- Owner Only
- Co-Editor
- Co-Publisher
- Specific Users / Groups
- anonymousRole
- viewerRole
- privateOnlyRole
- adminRole
- unmoderatedAdminRole

Define Skins For the Embedded Players

embedSkins - Define skins that can be used for embedded players. When configured, the Player Skin options are displayed on the Share > Embed tab.

Link to Media Page **Embed** Email

```
class="kmembed" allowfullscreen webkitallowfullscreen mozAllowFullScreen allow="autoplay "; fullscreen "; encrypted-media ""
referrerPolicy="no-referrer-when-downgrade" sandbox="allow-forms allow-same-origin allow-scripts allow-top-navigation allow-pointer-lock
allow-popups allow-modals allow-orientation-lock allow-popups-to-escape-sandbox allow-presentation allow-top-navigation-by-user-
activation" frameborder="0" title="Kaltura Player" style="position:absolute;top:0;left:0;width:100%;height:100%"></iframe></div></div>
```

Start & End Time: Start at 00:00:00 End at 00:00:00

Player Skin:  

Maximum Player Size: 608x402 400x285 200x2

Responsive Sizing:

Additional Information on Skins

name - What is the name of the skin? The skin name is displayed when the user selects an embedded skin.

imgFile - What is the relative path to the image file on the server? The image file represents how the skin looks.

uiConfId - What is the numerical value of the player ID to use in the embed code?

Define Sizes For the Embedded Players

embedSizes - Define sizes that can be used for embedded players. Define the player size in the following format: {width}x{height}

- large 608x402
- medium 400x285
- small 304x231

Link to Media Page **Embed** Email

```
class="kembed" allowfullscreen webkitallowfullscreen mozAllowFullScreen allow="autoplay "; encrypted-media ""  
referrerPolicy="no-referrer-when-downgrade" sandbox="allow-forms allow-same-origin allow-scripts allow-top-navigation allow-pointer-lock  
allow-popups allow-modals allow-orientation-lock allow-popups-to-escape-sandbox allow-presentation allow-top-navigation-by-user-  
activation" frameborder="0" title="Kaltura Player" style="position:absolute;top:0;left:0;width:100%;height:100%"></iframe></div>
```

Start & End Time: Start at 00:00:00 End at 00:00:00

Player Skin:  

Maximum Player Size: 608x402 400x285 200x2

Responsive Sizing:

Save

Save - Click **Save** to save your configuration settings.
