

Category Modules

Last Modified on 03/07/2021 9:27 pm IST

Categoryembed

This module enhances the [Secure Embed](https://knowledge.kaltura.com/help/embed#secureEmbed) (<https://knowledge.kaltura.com/help/embed#secureEmbed>) feature in the [Embed](https://knowledge.kaltura.com/help/embed) (<https://knowledge.kaltura.com/help/embed>) module, and is a prerequisite for turning this module on.

Once enabled, you can control if the content's embeds can be taken from within the category.

NOTE: This is a KMS feature only, and will not work on KAF instances.

Use this module to allow category managers to block embed-grabbing from their category (useful when managing copy-righted content whose consumption should be confined to the portal). For more information read [here](https://knowledge.kaltura.com/help/enhanced-settings-for-channel-and-category-embed) (<https://knowledge.kaltura.com/help/enhanced-settings-for-channel-and-category-embed>).

You can also limit embed-grabbing to published content only.

Field	Description
enabled	Enable the Categoryembed Module.
enableEmbedOnByDefault	What should be the default "Enable Embed" in the Channel settings page, affecting whether users can grab an embed of an entry in the context of a channel?
embedRoles	Select one or more roles that can grab an embed if enabled.
allowManagerOverride	Can a channel manager override the default behavior of Enable Embed?

Categorymembers

Field	Description
enabled	Enable the Categorymembers Module.

Field	Description
preventAddingUsers	When Enabled, if the category is mapped to a group name - the category manager will no longer be able to add/remove users manually. The only other option is to change the role of the users that were added through the synchronization process.
preventChangingRole	Prevent the category manager from overriding users' roles, where the offline synchronization process controls both the users and their roles.
findGroupUserSuggestions	When enabled, the user suggestions in Add Member to Category also finds the groups.

Categorymoderation

The **Categorymoderation** module pertains to MediaSpace only. For KAF applications, please refer to the [Channelmoderation](https://knowledge.kaltura.com/help/channelmoderation) (<https://knowledge.kaltura.com/help/channelmoderation>) module.

This module may be used by a category manager to enable moderation for a category.

Field	Description
enabled	Enable the Categorymoderation Module.
requestConfirmationPopup	Choose Yes to present a pop up to the moderator asking to confirm the rejection/approval.

The following video demonstrates how a category manager can enable moderation for a category:

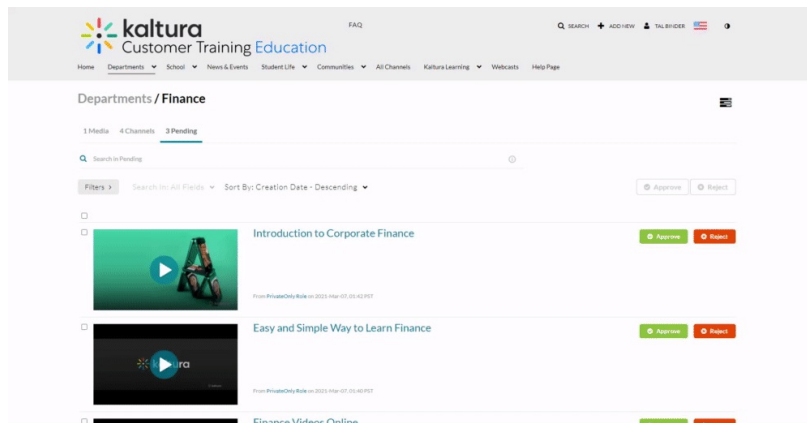

The screenshot shows a web interface for category options. At the top, there's a header "Options". Below it, there are three checkboxes under the label "Options:":

- ☐ Enable in-video annotations and analytics for category (Annotate)
- ☐ Moderate content (Media will not appear in category until approved by category manager)
- ☐ Enable comments in category

At the bottom of the form, there are three buttons: a green "Save" button, a blue "Back to Gallery" button, and a red "Delete Gallery" button.

The following video demonstrates the confirmation popup message displayed for the category manager/moderator:

Categorytheme

This module may be used to enable a category manager to choose what is the first tab to load into categories.

Field	Description
enabled	Enable the Categorytheme Module.
playerSet	<p>Create sets of players. Gallery managers will be able to select a player set from the Gallery theme tab to use in all the Galleries' media.</p> <p>A player set contains a list of players, one for each type of media. Media without a player uses the default media player.</p> <p>Click Add Player Set.</p>
playerSetName	Enter a player set name and click Add Player.
entryType	Select the type of entry.
playerId	Enter the PlayerID.
