About

The **Newrow module** lets users launch a real-time virtual room directly from Media Galleries, private rooms, or through the Newrow KAF integration.

In a live room, participants can:

- Play Kaltura content
- Record sessions and have them automatically uploaded back to Kaltura

Integration

When the module is enabled, all users will be able to enter the Newrow room from Media Gallery / Channel. A Launch Live Room button appears next to 'Add Media' in Media Galleries and Channels. Admins can configure whether this button is shown by default.

Inside the live room:

- Go to **Tools** > **Kaltura** to search and play Kaltura content with participants
- If the session is recorded, the recording is automatically uploaded to the associated Media Gallery or Channel

The module also supports launching rooms using a **Kaltura Resource ID** or **Event ID** (see the NewrowKAF module for more details).

xAPI Integration

Newrow supports xAPI integration for tracking quiz results, user joins, and user leaves. This functionality must be configured by a Newrow administrator.
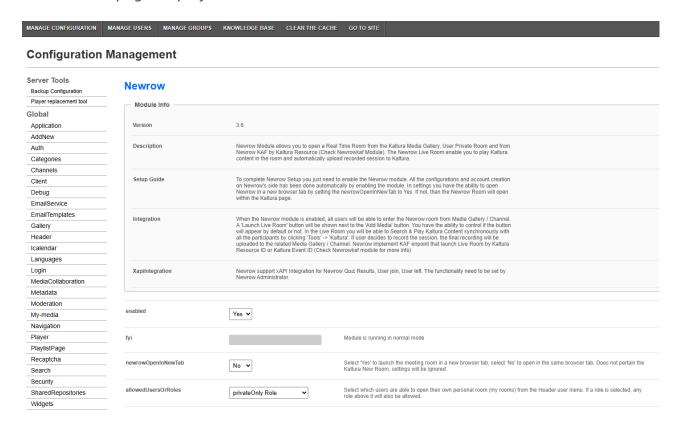

Configure

1. Go to your Configuration Management console and click on the **Newrow** module. You can also navigate to it directly using a link: https://{your_KMS_URL}/admin/config/tab/newrow.

ModulesCustom / core

~~Emaillogin~~

Hostnames

~~Interactivevideopath~~

Kalturaai

Kwebcast

Newrow

~~Raptmedia~~

The Newrow page displays.

2. Configure the following:

enabled to 'Yes' to enable the module.

newrowOpenInNewTab - Set to' Yes' to open the meeting room in a new browser tab. Set to 'No' to open it in the same tab.

> ℹ This setting does not apply to the Kaltura Room - any values selected here will be ignored.

allowedUsersOrRoles - Select which user roles can access their personal room ("My Room") from the header menu. If a role is selected, all roles with higher permissions will automatically have access as well. Choose from the following:

- PrivateOnly role
- admin role
- unmoderatedAdmin role
- Specific users / groups

joinButtonType - Define how the **Join Room** button behaves on the hero page:

- **Static** – The button is always visible. Room access is controlled by the room owner using the open/close doors feature.
- **Dynamic** – The button appears only after a moderator enters the room. For scheduled sessions, it remains hidden from end users until the start time.

When set to 'Static', new fields appear:

safariSupport - Allows users to join Live Rooms from Safari using the Kaltura Desktop Application for Mac.

> ⓘ
> This setting does not apply to the Kaltura Room - any values selected here will be ignored.

mobileSupport - Allows users to join Live Rooms using Kaltura's video conferencing apps for iOS and Android.

> ⓘ
> This setting does not apply to the Kaltura Room - any values selected here will be ignored.

channelRoomTemplates

Set the default room template and define which templates are available for channel owners to choose from when creating rooms.

availableRoomTemplates - Choose which room templates are available to room owners when creating a new room or editing room settings using the Room Template dropdown:

- **Interactive** – All cameras on by default. Supports up to 25 visible and 100 total participants. Best for workshops, training, and group discussions.
- **Webinar** – Speakers on camera, audience in chat. Supports up to 10 cameras and 300 participants. Moderators can bring audience members on stage.

defaultRoomTemplate - Sets the template applied to all new rooms by default.

> ℹ️
> The default template dropdown only becomes available after you select at least one option in **availableRoomTemplates** and click **Save**. Once saved, the default room template field will appear.

3. When you have finished configuring everything, click **Save**.
